### 25.1.7 PlanningEmployees

Search

Catalog: Robaws

Schema: PlanningItems

This is a read-only table function. The Robaws API may not support changing the data or the Invariantive SQL driver for Robaws does not cover it. In the latter case, please use the table `NativePlatformScalarRequests` to upload data to the Robaws API.

Select Robaws API URL: `/api/v2/planning-items`

Insert Robaws API URL: `/api/v2/planning-items`

Update Robaws API URL: `/api/v2/planning-items`

Delete Robaws API URL: `/api/v2/planning-items`

Field Selection Method: `NotRequired`

Base Path: `items[*].employees[*]`

Select Robaws API Operation: `get /api/v2/planning-items`

## Parameters of Table Function

The following parameters can be used to control the behaviour of the table function `PlanningEmployees`. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be treated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example with ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
<code>employeeId</code>	string	<input type="checkbox"/>		
<code>fromDate</code>	datetime	<input type="checkbox"/>		
<code>projectId</code>	string	<input type="checkbox"/>		
<code>searchText</code>	string	<input type="checkbox"/>		
<code>sort</code>	string	<input type="checkbox"/>		
<code>toDate</code>	datetime	<input type="checkbox"/>		
<code>updatedFrom</code>	datetime	<input type="checkbox"/>		

## Table Function Columns

The columns of the table function `PlanningEmployees` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
<code>address_addressLine1</code>	string		<input type="checkbox"/>	
<code>address_addressLine2</code>	string		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation

### 25.1.8 PlanningEmployeesBenefitsByPlanningId

Find one

Catalog: Robaws

Schema: PlanningItems

This is a read-only table function. The Robaws API may not support changing the data or the Invariantive SQL driver for Robaws does not cover it. In the latter case, please use the table `NativePlatformScalarRequests` to upload data to the Robaws API.

Select Robaws API URL: `/api/v2/planning-items/{id}`

Insert Robaws API URL: `/api/v2/planning-items/{id}`

Update Robaws API URL: `/api/v2/planning-items/{id}`

Delete Robaws API URL: `/api/v2/planning-items/{id}`

Field Selection Method: `NotRequired`

Base Path: `employees[*].benefits[*]`

Select Robaws API Operation: `get /api/v2/planning-items/{id}`

## Table Function Columns

The columns of the table function `PlanningEmployeesBenefitsByPlanningId` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
<code>address_addressLine1</code>	string		<input type="checkbox"/>	
<code>address_addressLine2</code>	string		<input type="checkbox"/>	
<code>address_city</code>	string	City	<input type="checkbox"/>	
<code>address_country</code>	string	Country	<input type="checkbox"/>	
<code>address_latitude</code>	double		<input type="checkbox"/>	
<code>address_longitude</code>	double		<input type="checkbox"/>	
<code>address_postalCode</code>	string		<input type="checkbox"/>	
<code>archivedAt_1</code>	datetime		<input type="checkbox"/>	
<code>archivedAt</code>	datetime		<input type="checkbox"/>	
<code>bankAccountNumber</code>	string		<input type="checkbox"/>	
<code>basePlanningItem_address_addressLine1</code>	string		<input type="checkbox"/>	
<code>basePlanningItem_address_addressLine2</code>	string		<input type="checkbox"/>	
<code>basePlanningItem_address_city</code>	string		<input type="checkbox"/>	
<code>basePlanningItem_address_country</code>	string		<input type="checkbox"/>	
<code>basePlanningItem_address_latitude</code>	double		<input type="checkbox"/>	
<code>basePlanningItem_address_longitude</code>	double		<input type="checkbox"/>	
<code>basePlanningItem_address_postalCode</code>	string		<input type="checkbox"/>	
<code>basePlanningItem_archivedAt</code>	datetime		<input type="checkbox"/>	
<code>basePlanningItem_basePlanningItem_address_addressLine1</code>	string		<input type="checkbox"/>	
<code>basePlanningItem_basePlanningItem_address_addressLine2</code>	string		<input type="checkbox"/>

### 25.1.9 PlanningEmployeesByPlanningId

Find one

Catalog: Robaws

Schema: PlanningItems

This is a read-only table function. The Robaws API may not support changing the data or the Invariantive SQL driver for Robaws does not cover it. In the latter case, please use the table `NativePlatformScalarRequests` to upload data to the Robaws API.

Select Robaws API URL: `/api/v2/planning-items/{id}`

Insert Robaws API URL: `/api/v2/planning-items/{id}`

Update Robaws API URL: `/api/v2/planning-items/{id}`

Delete Robaws API URL: `/api/v2/planning-items/{id}`

Field Selection Method: NotRequired

Base Path: `employees[*]`

Select Robaws API Operation: `get /api/v2/planning-items/{id}`

## Table Function Columns

The columns of the table function `PlanningEmployeesByPlanningId` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
address_addressLine1	string		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
address_addressLine2	string		<input type="checkbox"/>	
address_city	string	City	<input type="checkbox"/>	
address_country	string	Country	<input type="checkbox"/>	
address_latitude	double		<input type="checkbox"/>

### 25.1.10 PlanningEmployeeSkillsByPlanningId

Find one

Catalogus: Robaws

Schema: PlanningItems

Label: Vaardigheden planningsmedewerker per plannings-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PlanningEmployeeSkillsByPlanningId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 25.1.11 PlanningLines

Search

Catalogus: Robaws

Schema: PlanningItems

Label: Planningslijnen

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PlanningLines in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie
employeeld	string	<input type="checkbox"/>		
fromDate	datetime	<input type="checkbox"/>		
projectId	string	<input type="checkbox"/>		
searchText	string	<input type="checkbox"/>		
sort	string	<input type="checkbox"/>		
toDate	datetime	<input type="checkbox"/>		
updatedFrom	datetime	<input type="checkbox"/>		
withArchived	boolean	<input type="checkbox"/>		

## Kolommen van Tabelfunctie

De kolommen van de tabelfunctie PlanningLines worden hieronder weergegeven. Elke kolom heeft een SQL-gegevenstype.

Naam	Datatype	Label	Verplicht	Documentatie
address_addressLine1	string	Adresregel 1	<input type="checkbox"/>	
address_addressLine2	string	Adresregel 2	<input type="checkbox"/>

### 25.1.12 PlanningLinesById

Find one

Catalogus: Robaws

Schema: PlanningItems

Label: Planningslijn per ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PlanningLinesById in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 25.1.13 PlanningMaterialIds

Search

Catalogus: Robaws

Schema: PlanningItems

Label: Materiaal-ID&#39;s plannen

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PlanningMaterialIds in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie
employeeld	string	<input type="checkbox"/>		
fromDate	datetime	<input type="checkbox"/>		
projectId	string	<input type="checkbox"/>		
searchText	string	<input type="checkbox"/>		
sort	string	<input type="checkbox"/>		
toDate	datetime	<input type="checkbox"/>		

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie
updatedFrom	datetime	<input type="checkbox"/>		
withArchived	boolean	<input type="checkbox"/>		

## Kolommen van Tabelfunctie

De kolommen van de tabelfunctie PlanningMaterialIds worden hieronder weergegeven. Elke kolom heeft een SQL-gegevensstype.

Naam	Datatype	Label	Verplicht	Documentatie
address_addressLine1	string	Adresregel 1	<input type="checkbox"/>	
address_addressLine2	string	Adresregel 2	<input type="checkbox"/>

### 25.1.14 PlanningMaterialIdsByPlanningId

Find one

Catalogus: Robaws

Schema: PlanningItems

Label: Materiaal-ID's per planning-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PlanningMaterialIdsByPlanningId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 25.1.15 PlanningMaterials

Search

Catalogus: Robaws

Schema: PlanningItems

Label: Planningsmateriaal

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PlanningMaterials in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 25.1.16 PlanningMaterialsByPlanningId

Find one

Catalogus: Robaws

Schema: PlanningItems

Label: Planningsmateriaal per plannings-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS

ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PlanningMaterialsByPlanningId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 25.1.17 PlanningResourceIds

Search

Catalogus: Robaws

Schema: PlanningItems

Label: ID's van planningsbronnen

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PlanningResourceIds in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie
employeeId	string	<input type="checkbox"/>		
fromDate	datetime	<input type="checkbox"/>		
projectId	string	<input type="checkbox"/>		
searchText	string	<input type="checkbox"/>		

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie
sort	string	<input type="checkbox"/>		
toDate	datetime	<input type="checkbox"/>		
updatedFrom	datetime	<input type="checkbox"/>		
withArchived	boolean	<input type="checkbox"/>		

## Kolommen van Tafelfunctie

De kolommen van de tafelfunctie PlanningResourceIds worden hieronder weergegeven. Elke kolom heeft een SQL-gegevenstype.

Naam	Datatype	Label	Verplicht	Documentatie
address_addressLine1	string	Adresregel 1	<input type="checkbox"/>	
address_addressLine2	string	Adresregel 2	<input type="checkbox"/>

Find one

Catalogus: Robaws

Schema: PlanningItems

Label: ID's van planningsbronnen per plannings-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PlanningResourceIdsByPlanningId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen

worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

## Kolommen van Tabelfunctie

De kolommen van de tabelfunctie `PlanningResourceIdsByPlanningId` worden hieronder weergegeven. Elke kolom heeft een SQL-gegevenstype.

Naam	Datatype	Label	Verplicht	Documentatie
address_addressLine1	string	Adresregel 1	<input type="checkbox"/>	
address_addressLine2	string	Adresregel 2	<input type="checkbox"/>	
address_city	string	Plaats	<input type="checkbox"/>	
address_country	string	Land	<input type="checkbox"/>	
address_latitude	double		<input type="checkbox"/>	
address_longitude	double		<input type="checkbox"/>	
address_postalCode	string		<input type="checkbox"/>

### 25.1.19 PlanningResources

Search

Catalogus: Robaws

Schema: PlanningItems

Label: Hulpmiddelen voor planning

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PlanningResources in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie
employeeId	string	<input type="checkbox"/>		
fromDate	datetime	<input type="checkbox"/>		
projectId	string	<input type="checkbox"/>		
searchText	string	<input type="checkbox"/>		
sort	string	<input type="checkbox"/>		
toDate	datetime	<input type="checkbox"/>		
updatedFrom	datetime	<input type="checkbox"/>		
withArchived	boolean	<input type="checkbox"/>		

## Kolommen van Tabelfunctie

De kolommen van de tabelfunctie PlanningResources worden hieronder weergegeven. Elke kolom heeft een SQL-gegevenstype.

### 25.1.20 PlanningResourcesByPlanningId

Find one

Catalogus: Robaws

Schema: PlanningItems

Label: Hulpbronnen voor planning per plannings-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PlanningResourcesByPlanningId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 25.1.21 Plannings

Search

Catalogus: Robaws

Schema: PlanningItems

Label: Planning

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie Plannings in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

## 26 Schema: Posts

### 26.1 Tables

#### 26.1.1 PostCalculationLines

Search

Catalogus: Robaws

Schema: Posts

Label: Nacalculatielijnen

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

### Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PostCalculationLines in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden

gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie

### 26.1.7 PostsByld

Find one

Catalogus: Robaws

Schema: Posts

Label: Post door ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PostsByld in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 28.1.2 ProjectCommentsByProjectId

Get comments

Catalogus: Robaws

Schema: Projects

Label: Projectopmerkingen per project-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie ProjectCommentsByProjectId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 29.1.2 PurchaseInvoiceLinesByPurchaseInvoiceId

Find all

Catalogus: Robaws

Schema: PurchaseInvoiceLineItems

Label: Inkoopfactuurregels per inkoopfactuur-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PurchaseInvoiceLinesByPurchaseInvoiceId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen.

Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 30.1.5 PurchaseInvoiceLinesByPurchaseInvoiceId

Find one

Catalogus: Robaws

Schema: PurchaseInvoices

Label: Inkoopfactuurregels per inkoopfactuur-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PurchaseInvoiceLinesByPurchaseInvoiceId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen

geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 30.1.6 PurchaseInvoicePdfsByPurchaseInvoiceId

Generate PDF

Catalogus: Robaws

Schema: PurchaseInvoices

Label: PDF's van inkoopfacturen op inkoopfactuur-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PurchaseInvoicePdfsByPurchaseInvoiceId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 30.1.8 PurchaseInvoiceUblsByPurchaseInvoiceId

Generate UBL

Catalogus: Robaws

Schema: PurchaseInvoices

Label: UBL's van inkoopfacturen op inkoopfactuur-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie PurchaseInvoiceUblsByPurchaseInvoiceId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 31.1.2 SalesInvoiceLinesBySalesInvoiceId

Find all

Catalogus: Robaws

Schema: SalesInvoiceLineItems

Label: Verkoopfactuurregels op verkoopfactuur-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SalesInvoiceLinesBySalesInvoiceId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 32.1.3 SalesInvoiceByld

Find one

Catalogus: Robaws

Schema: SalesInvoices

Label: Verkoopfactuur op ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invariantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SalesInvoiceByld in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \*` uit tabel(waarde1, waarde2,

waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 32.1.4 SalesInvoiceCommentsBySalesInvoiceId

Get comments

Catalogus: Robaws

Schema: SalesInvoices

Label: Factuuropmerkingen op verkoopfactuur-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SalesInvoiceCommentsBySalesInvoiceId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 32.1.6 SalesInvoiceLines

Search

Catalogus: Robaws

Schema: SalesInvoices

Label: Verkoopfactuurregels op verkoopfactuur-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SalesInvoiceLines in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 32.1.7 SalesInvoiceLinesBySalesInvoiceId

Find one

Catalogus: Robaws

Schema: SalesInvoices

Label: Verkoopfactuurregels op verkoopfactuur-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invariantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SalesInvoiceLinesBySalesInvoiceId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 32.1.8 SalesInvoicePdfsBySalesInvoiceld

Generate PDF

Catalogus: Robaws

Schema: SalesInvoices

Label: PDF's van verkoopfacturen op ID verkoopfactuur

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SalesInvoicePdfsBySalesInvoiceld in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie
id	string	<input type="checkbox"/>		
type	string	<input type="checkbox"/>		Waarden: DEFAULT, SIMPLE, CMR.

### 33.1.2 SalesOrderCommentsBySalesOrderId

Get comments

Catalogus: Robaws

Schema: SalesOrders

Label: Opmerkingen verkooporder per ID verkooporder

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SalesOrderCommentsBySalesOrderId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 33.1.5 SalesOrderLinesBySalesOrderId

Find one

Catalogus: Robaws

Schema: SalesOrders

Label: Verkooporderregels per order-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SalesOrderLinesBySalesOrderId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 33.1.6 SalesOrderPdfsBySalesOrderId

Generate PDF

Catalogus: Robaws

Schema: SalesOrders

Label: PDF's van verkooporders op order-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SalesOrderPdfsBySalesOrderId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie
id	string	<input type="checkbox"/>		
type	string	<input type="checkbox"/>		Waarden: DEFAULT, SIMPLE, PRO_FORMA, PRO_FORMA_SIMPLE, NO_PRICES.

## Kolommen van Tafelfunctie

De kolommen van de tafelfunctie SalesOrderPdfsBySalesOrderId worden hieronder weergegeven. Elke kolom heeft een SQL-gegevenstype.

## 34 Schema: StockChanges

### 34.1 Tables

#### 34.1.1 StockChangeArticles

Search

Catalogus: Robaws

Schema: StockChanges

Label: Artikelen over aandelen veranderen

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

### Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie StockChangeArticles in te stellen. Voor verplichte parameters moet altijd een waarde worden

opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 34.1.2 StockChangeArticlesByStockChangeld

Find one

Catalogus: Robaws

Schema: StockChanges

Label: Voorraadwijziging Artikelen per Voorraadwijziging ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie StockChangeArticlesByStockChangeld in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 34.1.3 StockChangeById

Find one

Catalogus: Robaws

Schema: StockChanges

Label: Voorraadwijziging per ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invariantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie StockChangeById in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2,

waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Get comments

Catalogus: Robaws

Schema: StockChanges

Label: Voorraadwijzigingen per voorraadwijzigings-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie StockChangeCommentsByStockChangeld in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 34.1.8 StockChanges

Search

Catalogus: Robaws

Schema: StockChanges

Label: Voorraadwijzigingen

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie StockChanges in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie

### 34.1.9 StockChangesFromSupplyOrder

Get stock change from supply order

Catalogus: Robaws

Schema: StockChanges

Label: Voorraadwijzigingen van leveringsorder

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie StockChangesFromSupplyOrder in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 34.1.10 StockChangesFromSupplyOrderArticle

Get stock change from supply order

Catalogus: Robaws

Schema: StockChanges

Label: Voorraadwijzigingen van artikel Leveringsbon

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie StockChangesFromSupplyOrderArticle in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 34.1.11 StockChangesFromSupplyOrderMaterial

Get stock change from supply order

Catalogus: Robaws

Schema: StockChanges

Label: Voorraadwijzigingen van materiaal voor de leveringsorder

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie `StockChangesFromSupplyOrderMaterial` in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een ``select * uit tabel(waarde1, waarde2, waarde3)`` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met ``selecteer * uit tabel(naam1 => waarde1, naam3 => waarde3)`` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie

## 35 Schema: StockLocations

### 35.1 Tables

#### 35.1.1 StockLocationById

Find one

Catalogus: Robaws

Schema: StockLocations

Label: Voorraadlocatie per ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

### Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie StockLocationById in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 36.1.2 SubscriptionCommentsBySubscriptionId

Get comments

Catalogus: Robaws

Schema: Subscriptions

Label: Abonnement Commentaar per Abonnement ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SubscriptionCommentsBySubscriptionId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie

Label: Abonnement Lijnen

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SubscriptionLines in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Naam	Datatype	Verplicht	Standaardwaarde	Documentatie

### 36.1.5 SubscriptionLinesBySubscriptionId

Find one

Catalogus: Robaws

Schema: Subscriptions

Label: Abonnementsregels per abonnement-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SubscriptionLinesBySubscriptionId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SubscriptionPdfsBySubscriptionId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

### 38.1.3 SupplierContactsBySubscriptionId

Find one

Catalogus: Robaws

Schema: Suppliers

Label: Leverancierscontacten op abonnements-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

## Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie SupplierContactsBySubscriptionId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen.

Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

## 41 Schema: Users

### 41.1 Tables

#### 41.1.1 UserById

Find one

Catalogus: Robaws

Schema: Users

Label: Gebruiker op ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

### Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie UserById in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

## 46 Schema: WorkOrderLineItems

### 46.1 Tables

#### 46.1.1 WorkOrderLineIdsByWorkOrderId

Find one

Catalogus: Robaws

Schema: WorkOrderLineItems

Label: ID's van werkorders per order-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invariantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

### Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie WorkOrderLineIdsByWorkOrderId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

#### 47.1.5 WorkOrderDocumentsByWorkOrderId

Get documents

Catalogus: Robaws

Schema: WorkOrders

Label: Werkorderdocumenten op werkorder-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

### Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie WorkOrderDocumentsByWorkOrderId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.

## 48 Schema: WorkOrderTimeEntries

### 48.1 Tables

#### 48.1.1 WorkOrderTimeEntriesByWorkOrderId

Find all

Catalogus: Robaws

Schema: WorkOrderTimeEntries

Label: Werkordertijdboekingen per werkorder-ID

Dit is een alleen-lezen tabelfunctie. De ROBAWS API biedt mogelijk geen ondersteuning voor het wijzigen van de data of het Invantive SQL-stuurprogramma voor ROBAWS ondersteunt dit niet. In het laatste geval gebruikt u de tabel NativePlatformScalarRequests om gegevens te uploaden naar de ROBAWS-API.

### Parameters van de tabelfunctie

De volgende parameters kunnen worden gebruikt om het gedrag van de tabelfunctie WorkOrderTimeEntriesByWorkOrderId in te stellen. Voor verplichte parameters moet altijd een waarde worden opgegeven, maar optionele parameters hoeven in het algemeen geen waarde te hebben en de uitvoering zal standaard een vooraf bepaald gedrag vertonen. Waarden kunnen worden gespecificeerd op basis van positie en naam. In beide gevallen

worden alle niet-gespecificeerde parameters geëvalueerd aan de hand van hun standaardwaarden.

Waardespecificatie op positie gebeurt door alle waarden van de eerste tot de laatste benodigde waarde op te sommen. Bijvoorbeeld: een `select \* uit tabel(waarde1, waarde2, waarde3)` op een tabel met vier parameters zal de standaardwaarde voor de vierde parameter gebruiken en de opgegeven waarden voor de eerste drie.

Waardespecificatie op naam gebeurt door alle waarden die een waarde vereisen op te sommen. Bijvoorbeeld met `selecteer \* uit tabel(naam1 => waarde1, naam3 => waarde3)` op dezelfde tabel zullen de standaardwaarden voor de tweede en vierde parameter worden gebruikt en de opgegeven waarden voor de eerste en derde.
