Important Safety and Usage Information

Intended Use and Limitations: This software, developed by Invantive, is designed to support a variety of business and information technology data processing functions, such as accounting, financial reporting and sales reporting. It is important to note that this software is not designed, tested, or approved for use in environments where malfunction or failure could lead to life-threatening situations or severe physical or environmental damage. This includes, but is not limited to:

- Nuclear facilities: The software should not be used for operations or functions related to the control, maintenance, or operation of nuclear facilities.
- Defense and Military Applications: This software is not suitable for use in defense-related applications, including but not limited to weaponry control, military strategy planning, or any other aspects of national defense.
- Aviation: The software is not intended for use in the operation, navigation, or communication systems of any aircraft or air traffic control environments.
- Healthcare and Medicine Production: This software should not be utilized for medical device operation, patient data analysis for critical health decisions, pharmaceutical production, or medical research where its failure or malfunction could impact patient health.
- Chemical and Hazardous Material Handling: This software is not intended for the management, control, or operational aspects of chemical plants or hazardous material handling facilities. Any malfunction in software used in these settings could result in dangerous chemical spills, explosions, or environmental disasters.
- Transportation and Traffic Control Systems: The software should not be used for the control, operation, or management of transportation systems, including railway signal controls, subway systems, or traffic light management. Malfunctions in such critical systems could lead to severe accidents and endanger public safety.
- Energy Grid and Utility Control Systems: This software is not designed for the control or operation of energy grid systems, including electrical substations, renewable energy control systems, or water utility control systems. The failure of software in these areas could lead to significant power outages, water supply disruptions, or other public utility failures, potentially endangering communities and causing extensive damage.
- Other High-Risk Environments: Any other critical infrastructure and environments where a failure of the software could result in significant harm to individuals or the environment.

User Responsibility: Users must ensure that they understand the intended use of the software and refrain from deploying it in any setting that falls outside of its designed purpose. It is the responsibility of the user to assess the suitability of the software for their intended application, especially in any scenarios that might pose a risk to life, health, or the environment.

Disclaimer of Liability: Invantive disclaims any responsibility for damage, injury, or legal consequences resulting from the use or misuse of this software in prohibited or unintended applications.

Index**3076**

1 SQL Driver for Visma.net Financials API

Invantive SQL is the fastest, easiest and most reliable way to exchange data with the Visma.net Financials API.

Use the "Search" option in the left menu to search for a specific term such as the table or column description. When you already know the term, please use the "Index" option. When you can't find the information needed, please click on the Chat button at the bottom or place your question in the [user community](#). Invantive Support or other users will try to help you.

Visma.net Financials is online software for accounting. Visma.net is used both by large accounting firms as well as large entrepreneurs.

The Visma.net Financials driver covers 635 tables and 39478 columns.

Visma.net Financials API Clients

Invantive SQL is available on many user interfaces ("clients" in traditional server-client paradigm). All Invantive SQL statements can be exchanged with a close to 100% compatibility across all clients and operating systems (Windows, MacOS, Linux, iOS, Android).

The clients include Microsoft Excel, Microsoft Power BI, Microsoft Power Query, Microsoft Word and Microsoft Outlook. Web-based clients include Invantive Cloud, Invantive Bridge Online as OData proxy, Invantive App Online for interactive apps, Online SQL Editor for query execution and Invantive Data Access Point as extended proxy.

The [Visma.net Financials Power BI connector](#) is based on the Invantive SQL driver for Visma.net Financials, completed by a high-performance OData connector which works straight on Power BI without any add-on. The OData protocol is always version 4, independent whether the backing platform uses OData, SOAP or another protocol.

For technical users there are command-line editions of Invantive Data Hub running on iOS, Android, Windows, MacOS and Linux. Invantive Data Hub is also often used for enterprise server applications such as ETL. High-volume replication of data taken from the Visma.net Financials API into traditional databases such as SQL Server (on-premises and Azure), MySQL, PostgreSQL and Oracle is possible using [Invantive Data Replicator](#). Invantive Data Replicator automatically creates and maintains Visma.net Financials datawarehouses, possibly in combination with data from over 75 other (cloud) platforms. Invantive Data Replicator supports data volumes up to over 1 TB and over 5.000 companies. The on-premise edition of Invantive Bridge offers an Visma.net Financials ADO.net provider.

Finally, online web apps can be build for Visma.net Financials using App Online of [Invantive Cloud](#).

Monitor API Calls

When a query or DML-statement has been executed on Invantive SQL a developer can evaluate the actual calls made to the Visma.net Financials API using a query on sessionios@DataDictionary. As an alternative, extensive request and response logging can be enabled by setting log-native-calls-to-disk to true. In the %USERPROFILE%\Invantive\NativeLog folder Invantive SQL will create log files per Visma.net Financials API request and response.

Specifications

The SQL driver for Visma.net Financials supports partitioning: data from multiple companies are all listed together in one table. The value of the column COMPANY_CODE indicates which company the data belongs to.

An introduction into the concepts of Invantive SQL such as databases, data containers and partitioning can be found in the [Invantive SQL grammar](#).

The configuration can be changed using various attributes from the database definition, on log on and during use. A full list of configuration options is listed in the [driver attributes](#).

The catalog name is used to compose the full qualified name of an object like a table or view. The schema name is used to compose the full qualified name of an object like a table or view. On Visma.net Financials the comparison of two texts is case sensitive by default.

Changes and bug fixes on the Visma.net Financials SQL driver can be found in the [release notes](#). Get access to the community through the [Visma.net Financials section](#) of the Invantive forums.

Driver code for use in settings.xml: `VismaNet`

Alias: `vnet`

Recommended alias: `vnt`

Partition Label: `Bedrijf`

Driver code for use in settings.xml

Please make sure your user is authorized to use the API when no companies are listed in AvailableContext. Typically the user needs the following user roles: 'Financials User' and 'Financials Administrator'. Test the privileges using <https://integration.visma.net/API-index/> and choosing the 'Authorize' button. When successfully authorized, the Authorize button should be replaced by a 'Logout' button. In case of a JSON error message contact your application administrator.

Updated 22-12-2022 21:03 using Invantive SQL version 22.1.101-BETA+3681.

2 SQL Driver Attributes for Visma.net Financials API

The SQL driver for Visma.net Financials has many attributes that can be finetuned to improve handling in scenarios with unreliable network connections to the API server of Visma.net Financials or high volumes of data. Also, many drivers have driver-specific attributes to finetune actual behaviour or handle data not matching specifications.

The Visma.net Financials driver attributes are assigned a default value which seldom requires change. However, changes can be applied when needed on four levels, which are reflected in the table below by separate checkmarks:

- Connection string: the connection string from the settings*.xml file and applied during log on.
- Set SQL statement: a set SQL-statement to be executed once connection has been established.
- Log on: value to be specified interactively by user during log on in a user interface.

The connection string for Visma.net Financials can be found in the settings*.xml file used for the database. The reference manuals contain instructions how to relocate the settings*.xml files. Settings*.xml files are typically located in the %USERPROFILE%\invantive folder in most deployment scenarios. Each data container of a database in the connection string can

have a `connectionString` element specifying the name and values of attributes. Both name and value must be properly escaped according to XML-semantics. Actual application of the value is solely done during log on. A new connection must be established to change the value of a driver attribute using a connection string.

The set SQL statement can be executed after log on. The syntax is: `set NAME VALUE`, or for a distributed database: `set NAME@ALIAS VALUE`. In some scenarios you may need to enclose the driver attribute name in square brackets to escape it from parsing, for instance when a reserved SQL keyword is part of the name. The new value takes effect straight after execution of the set-statement. The set-statement can be executed as often as needed during a session.

Driver attributes that can be interactively set to a value are typically presented in the log on window. Depending on the platform and design decisions of the user interface designer, some or all of the available driver attributes can have been made available.

The Visma.net Financials driver can be configured using the following attributes:

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Driver's File	Set from Log On
add-odata-mandatory-filters	Whether to automatically add OData filters deemed necessary by the platform.	OData	False	✓	✓	✓	
analysis-enforce-row-uniqueness	Enforce rows to be unique for software analysis.	Shared	False	✓	✓	✓	
api-access-token	Access Token is a security token for multiple OAuth2 Flows. With an Access Token you can access protected resources. An Access Token must be stored securely since once compromised allows access to your protected resources.	OData		✓		✓	✓
api-client-id	The client ID is a unique identifier of your application. It is generated by registering an application.	OData		✓		✓	✓
api-client-secret	The client secret is to be kept confidential. Such as a password for a logon code, the client secret is the confidential part of an app identified by a client ID. It is needed during the OAuth2 Code Grant Flow together with the refresh token to get access.	OData		✓		✓	✓
api-pre-expiry-refresh-sec	The number of seconds before the token expires to acquire a new token.	OData		✓	✓	✓	
api-redirect-url	The redirect URI is the website a browser session is redirected to after the OAuth2 authentication process has been completed.	OData		✓		✓	✓
api-refresh-token	Refresh Token is a security token for the OAuth2 Code Grant Flow. With a Refresh Token and client secret you can retrieve a renewed access token to access protected	OData		✓		✓	✓

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Drivers File	Set from Log On
	resources. A Refresh Token and client secret must be stored securely since once compromised allows access to your protected resources.						
api-scope	The authorization scope(s) to request an OAuth token for.	OData		✓		✓	
api-token-url	The token URI is the OAuth2 endpoint to exchange tokens with.	OData		✓		✓	
api-url	URL of web service.	OData		✓		✓	
bulk-delete-page-size-rows	Number of rows to delete per batch when bulk deleting.	Shared	10000	✓	✓	✓	
bulk-insert-page-size-bytes	Approximate maximum size in bytes of batch when bulk inserting.	Shared	10000000	✓	✓	✓	
bulk-insert-page-size-rows	Number of rows to insert per batch when bulk inserting.	Shared	250	✓	✓	✓	
download-error-400-bad-request-max-tries	Maximum number of tries when HTTP server reports bad format during retrieval of data.		3	✓	✓	✓	
download-error-400-bad-request-sleep-initial-ms	Initial sleep in milliseconds between retries when HTTP server reports that the API server is unavailable during retrieval of data.		500	✓	✓	✓	
download-error-400-bad-request-sleep-max-ms	Maximum sleep in milliseconds between retries when HTTP server reports that the API server is unavailable during retrieval of data.		5000	✓	✓	✓	
download-error-400-bad-request-sleep-multiplicator	Multiplication factor for sleep between retries HTTP server reports that the API server is unavailable during retrieval of data.		2	✓	✓	✓	
download-error-408-request-timeout-max-tries	Maximum number of tries when the website reports a HTTP status 408.		10	✓	✓	✓	
download-error-408-request-timeout-sleep-initial-ms	Initial sleep in milliseconds between retries when the website reports a HTTP status 408.		10000	✓	✓	✓	
download-error-408-request-timeout-sleep-max-ms	Maximum sleep in milliseconds between retries when the website reports a HTTP status 408.		300000	✓	✓	✓	
download-error-408-request-timeout-sleep-multiplicator	Multiplication factor for sleep between retries when the website reports a HTTP status 408.		2	✓	✓	✓	
download-error-422-bad-request-max-tries	Maximum number of tries when HTTP server reports unprocessable entity during retrieval of data.		30	✓	✓	✓	
download-error-422-bad-request-sleep-initial-ms	Initial sleep in milliseconds between retries when HTTP server reports unprocessable entity during retrieval of data.		10000	✓	✓	✓	

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Driver's File	Set from Log On
dow nload-error-422-bad-request-sleep-max-ms	Maximum sleep in milliseconds between retries when HTTP server reports unprocessable entity during retrieval of data.		300000	✓	✓	✓	
dow nload-error-422-bad-request-sleep-multiplicator	Multiplication factor for sleep between retries HTTP server reports unprocessable entity during retrieval of data.		2	✓	✓	✓	
dow nload-error-429-too-many-requests-max-tries	Maximum number of tries when the website reports that too many requests have been made during a timeslot of one minute or one day.		10	✓	✓	✓	
dow nload-error-429-too-many-requests-sleep-initial-ms	Initial sleep in milliseconds between retries when the website reports that too many requests have been made during a timeslot of one minute or one day.		10000	✓	✓	✓	
dow nload-error-429-too-many-requests-sleep-max-ms	Maximum sleep in milliseconds between retries when the website reports that too many requests have been made during a timeslot of one minute or one day.		300000	✓	✓	✓	
dow nload-error-429-too-many-requests-sleep-multiplicator	Multiplication factor for sleep between retries when the website reports that too many requests have been made during a timeslot of one minute or one day.		2	✓	✓	✓	
dow nload-error-502-server-unavailable-max-tries	Maximum number of tries when HTTP server reports a bad gateway during retrieval of data.		30	✓	✓	✓	
dow nload-error-502-server-unavailable-sleep-initial-ms	Initial sleep in milliseconds between retries when HTTP server reports a bad gateway during retrieval of data.		10000	✓	✓	✓	
dow nload-error-502-server-unavailable-sleep-max-ms	Maximum sleep in milliseconds between retries when HTTP server reports that a bad gateway during retrieval of data.		300000	✓	✓	✓	
dow nload-error-502-server-unavailable-sleep-multiplicator	Multiplication factor for sleep between retries HTTP server reports a bad gateway during retrieval of data.		2	✓	✓	✓	
dow nload-error-503-server-unavailable-max-tries	Maximum number of tries when HTTP server reports that the API server is unavailable during retrieval of data.		30	✓	✓	✓	
dow nload-error-503-server-unavailable-sleep-initial-ms	Initial sleep in milliseconds between retries when HTTP server reports that the API server is unavailable during retrieval of data.		10000	✓	✓	✓	

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Drivers File	Set from Log On
dow nload-error-503-server-unavailable-sleep-max-ms	Maximum sleep in milliseconds between retries when HTTP server reports that the API server is unavailable during retrieval of data.		300000	✓	✓	✓	
dow nload-error-503-server-unavailable-sleep-multiplicator	Multiplication factor for sleep between retries HTTP server reports that the API server is unavailable during retrieval of data.		2	✓	✓	✓	
dow nload-error-504-gateway-timeout-max-tries	Maximum number of tries when the website reports a gateway timeout.		10	✓	✓	✓	
dow nload-error-504-gateway-timeout-sleep-initial-ms	Initial sleep in milliseconds between retries when the website reports a gateway timeout.		10000	✓	✓	✓	
dow nload-error-504-gateway-timeout-sleep-max-ms	Maximum sleep in milliseconds between retries when the website reports a gateway timeout.		300000	✓	✓	✓	
dow nload-error-504-gateway-timeout-sleep-multiplicator	Multiplication factor for sleep between retries when the website reports a gateway timeout.		2	✓	✓	✓	
dow nload-error-590-netw ork-connect-timeout-max-tries	Maximum number of tries when the website reports a HTTP status 590.		10	✓	✓	✓	
dow nload-error-590-netw ork-connect-timeout-sleep-initial-ms	Initial sleep in milliseconds between retries when the website reports a HTTP status 590.		10000	✓	✓	✓	
dow nload-error-590-netw ork-connect-timeout-sleep-max-ms	Maximum sleep in milliseconds between retries when the website reports a HTTP status 590.		300000	✓	✓	✓	
dow nload-error-590-netw ork-connect-timeout-sleep-multiplicator	Multiplication factor for sleep between retries when the website reports a HTTP status 590.		2	✓	✓	✓	
dow nload-error-599-netw ork-connect-timeout-max-tries	Maximum number of tries when the website reports a HTTP status 599.		10	✓	✓	✓	
dow nload-error-599-netw ork-connect-timeout-sleep-initial-ms	Initial sleep in milliseconds between retries when the website reports a HTTP status 599.		10000	✓	✓	✓	
dow nload-error-599-netw ork-connect-timeout-sleep-max-ms	Maximum sleep in milliseconds between retries when the website reports a HTTP status 599.		300000	✓	✓	✓	

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Driver's File	Set from Log On
dow nload-error-599-netw ork-connect-timeout-sleep-multiplicator	Multiplication factor for sleep between retries when the website reports a HTTP status 599.		2	✓	✓	✓	
dow nload-error-argument-exception-max-tries	Maximum number of tries when an argument exception is returned when downloading a blob.		10	✓	✓	✓	
dow nload-error-argument-exception-sleep-initial-ms	Initial sleep in milliseconds between retries when an argument exception is returned when downloading a blob.		10000	✓	✓	✓	
dow nload-error-argument-exception-sleep-max-ms	Maximum sleep in milliseconds between retries when an argument exception is returned when downloading a blob.		300000	✓	✓	✓	
dow nload-error-argument-exception-sleep-multiplicator	Multiplication factor for sleep between retries when an argument exception is returned when downloading a blob.		2	✓	✓	✓	
dow nload-error-internet-dow n-max-tries	Maximum number of tries when the Internet connection seems down during retrieval of data.		10	✓	✓	✓	
dow nload-error-internet-dow n-sleep-initial-ms	Initial sleep in milliseconds between retries when the Internet connection seems down during retrieval of data.		10000	✓	✓	✓	
dow nload-error-internet-dow n-sleep-max-ms	Maximum sleep in milliseconds between retries when the Internet connection seems down during retrieval of data.		300000	✓	✓	✓	
dow nload-error-internet-dow n-sleep-multiplicator	Multiplication factor for sleep between retries when the Internet connection seems down during retrieval of data.		2	✓	✓	✓	
dow nload-error-io-exception-max-tries	Maximum number of tries when a network I/O connection failure occurs during retrieval of data.		10	✓	✓	✓	
dow nload-error-io-exception-sleep-initial-ms	Initial sleep in milliseconds between retries when a network I/O connection failure occurs during retrieval of data.		10000	✓	✓	✓	
dow nload-error-io-exception-sleep-max-ms	Maximum sleep in milliseconds between retries when a network I/O connection failure occurs during retrieval of data.		300000	✓	✓	✓	
dow nload-error-io-exception-sleep-multiplicator	Multiplication factor for sleep between retries when a network I/O connection failure occurs during retrieval of data.		2	✓	✓	✓	
dow nload-error-json-exception-max-tries	Maximum number of tries when an invalid JSON body is returned.		3	✓	✓	✓	

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Drivers File	Set from Log On
dow nload-error-json-exception-sleep-initial-ms	Initial sleep in milliseconds betw een retries w hen an invalid JSON body is returned.		1000	✓	✓	✓	
dow nload-error-json-exception-sleep-max-ms	Maximum sleep in milliseconds betw een retries w hen an invalid JSON body is returned.		10000	✓	✓	✓	
dow nload-error-json-exception-sleep-multiplicator	Multiplication factor for sleep betw een retries w hen an invalid JSON body is returned.		2	✓	✓	✓	
dow nload-error-other-exception-max-tries	Maximum number of tries w hen an unqualified error occurs during retrieval of data.		3	✓	✓	✓	
dow nload-error-other-exception-sleep-initial-ms	Initial sleep in milliseconds betw een retries w hen an unqualified error occurs during retrieval of data.		10000	✓	✓	✓	
dow nload-error-other-exception-sleep-max-ms	Maximum sleep in milliseconds betw een retries w hen an unqualified error occurs during retrieval of data.		300000	✓	✓	✓	
dow nload-error-other-exception-sleep-multiplicator	Multiplication factor for sleep betw een retries w hen an unqualified error occurs during retrieval of data.		2	✓	✓	✓	
dow nload-error-socket-exception-max-tries	Maximum number of tries w hen the netw ork connection is forcible dropped during retrieval of data.		10	✓	✓	✓	
dow nload-error-socket-exception-sleep-initial-ms	Initial sleep in milliseconds betw een retries w hen the netw ork connection is forcible dropped during retrieval of data.		10000	✓	✓	✓	
dow nload-error-socket-exception-sleep-max-ms	Maximum sleep in milliseconds betw een retries w hen the netw ork connection is forcible dropped during retrieval of data.		300000	✓	✓	✓	
dow nload-error-socket-exception-sleep-multiplicator	Multiplication factor for sleep betw een retries w hen the netw ork connection is forcible dropped during retrieval of data.		2	✓	✓	✓	
dow nload-error-w eb-exception-max-tries	Maximum number of tries w hen a w eb connection failure occurs during retrieval of data.		10	✓	✓	✓	
dow nload-error-w eb-exception-sleep-initial-ms	Initial sleep in milliseconds betw een retries w hen a w eb connection failure occurs during retrieval of data.		10000	✓	✓	✓	
dow nload-error-w eb-exception-sleep-max-ms	Maximum sleep in milliseconds betw een retries w hen a w eb connection failure occurs during retrieval of data.		300000	✓	✓	✓	
dow nload-error-w eb-exception-sleep-multiplicator	Multiplication factor for sleep betw een retries w hen a w eb connection failure occurs during retrieval of data.		2	✓	✓	✓	

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Driver's File	Set from Log On
dow nload-error-web-not-implemented-max-tries	Maximum number of tries w hen the connection reports not implemented.		1	✓	✓	✓	
dow nload-error-web-not-implemented-sleep-initial-ms	Initial sleep in milliseconds betw een retries w hen the connection reports not implemented.		10000	✓	✓	✓	
dow nload-error-web-not-implemented-sleep-max-ms	Maximum sleep in milliseconds betw een retries w hen the connection reports not implemented.		300000	✓	✓	✓	
dow nload-error-web-not-implemented-sleep-multiplicator	Multiplication factor for sleep betw een retries w hen the connection reports not implemented.		2	✓	✓	✓	
dow nload-error-web-timeout-max-tries	Maximum number of tries w hen the connection reports a timeout.		10	✓	✓	✓	
dow nload-error-web-timeout-sleep-initial-ms	Initial sleep in milliseconds betw een retries w hen the connection reports a timeout.		1000	✓	✓	✓	
dow nload-error-web-timeout-sleep-max-ms	Maximum sleep in milliseconds betw een retries w hen the connection reports a timeout.		30000	✓	✓	✓	
dow nload-error-web-timeout-sleep-multiplicator	Multiplication factor for sleep betw een retries w hen the connection reports a timeout.		2	✓	✓	✓	
dow nload-error-web-unauthorized-max-tries	Maximum number of tries w hen the connection reports an unauthorized error.		1	✓	✓	✓	
dow nload-error-web-unauthorized-sleep-initial-ms	Initial sleep in milliseconds betw een retries w hen the connection reports an unauthorized error.		10000	✓	✓	✓	
dow nload-error-web-unauthorized-sleep-max-ms	Maximum sleep in milliseconds betw een retries w hen the connection reports an unauthorized error.		300000	✓	✓	✓	
dow nload-error-web-unauthorized-sleep-multiplicator	Multiplication factor for sleep betw een retries w hen the connection reports an unauthorized error.		2	✓	✓	✓	
fail-on-duplicate-rows	When true, an error is raised w hen there are multiple row s w ith identical values in a single table..		True	✓	✓	✓	✓
force-case-sensitive-identifiers	Consider identifiers as case-sensitive independent of the platform capabilities.	Shared	False	✓	✓	✓	
forced-casing-identifiers	Forced casing of identifiers. Choose from: Unset, Low er, Upper and Mixed.	Shared		✓	✓	✓	

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Drivers File	Set from Log On
http-disk-cache-compression-level	Compression level for the HTTP disk cache, ranging from 1 (little) to 9 (intense). Default is 5.	Shared	5	✓	✓	✓	
http-disk-cache-directory	Directory where HTTP cache is stored.	Shared	C:\Users\gle3.WS212\Invasive\Cache\http\gle3\shared	✓	✓	✓	
http-disk-cache-ignore-write-errors	Whether to ignore write errors to disk cache.	Shared	False	✓	✓	✓	
http-disk-cache-max-age-sec	Maximum acceptable age in seconds for use of data in the HTTP disk cache.	Shared	2592000	✓	✓	✓	
http-get-timeout-max-ms	HTTP GET maximum timeout on retry (ms).		24000	✓	✓	✓	
http-get-timeout-ms	HTTP GET timeout (ms).		56000	✓	✓	✓	
http-memory-cache-compression-level	Compression level for the HTTP memory cache, ranging from 1 (little) to 9 (intense). Default is 5.	OData	5	✓	✓	✓	
http-memory-cache-max-age-sec	Maximum acceptable age in seconds for use of data in the HTTP memory cache.	OData	14400	✓	✓	✓	
http-post-timeout-max-ms	HTTP POST maximum timeout on retry (ms).		58000	✓	✓	✓	
http-post-timeout-ms	HTTP POST timeout (ms).		57000	✓	✓	✓	
ignore-http-400-errors	Ignore HTTP 400 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
ignore-http-401-errors	Ignore HTTP 401 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
ignore-http-402-errors	Ignore HTTP 402 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
ignore-http-403-errors	Ignore HTTP 403 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
ignore-http-404-errors	Ignore HTTP 404 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
ignore-http-422-errors	Ignore HTTP 422 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
ignore-http-429-errors	Ignore HTTP 429 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
ignore-http-500-errors	Ignore HTTP 500 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Driver's File	Set from Log On
ignore-http-502-errors	Ignore HTTP 502 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
ignore-http-503-errors	Ignore HTTP 503 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
ignore-unknown-path-type	Whether to ignore path types not yet supported. An error will be generated when an unsupported type occurs.		True	✓	✓	✓	✓
ignore-values-unknown-path	Whether to ignore values outside of processed paths. An error will be generated when a value occurs outside a path otherwise.		True	✓	✓	✓	✓
invalid-json-on-get-max-tries	Maximum number of tries when the JSON received on GET is invalid.		1	✓	✓	✓	
invalid-json-on-get-sleep-initial-ms	Initial sleep in milliseconds between retries when the JSON received on GET is invalid.		1000	✓	✓	✓	
invalid-json-on-get-sleep-max-ms	Maximum sleep in milliseconds between retries when the JSON received on GET is invalid.		10000	✓	✓	✓	
invalid-json-on-get-sleep-multiplicator	Multiplication factor for sleep between retries when the JSON received on GET is invalid.		2	✓	✓	✓	
invalid-json-on-post-max-tries	Maximum number of tries when the JSON received on POST is invalid.		1	✓	✓	✓	
invalid-json-on-post-sleep-initial-ms	Initial sleep in milliseconds between retries when the JSON received on POST is invalid.		1000	✓	✓	✓	
invalid-json-on-post-sleep-max-ms	Maximum sleep in milliseconds between retries when the JSON received on POST is invalid.		10000	✓	✓	✓	
invalid-json-on-post-sleep-multiplicator	Multiplication factor for sleep between retries when the JSON received on POST is invalid.		2	✓	✓	✓	
invariant-sql-compress-sparse-arrays	Whether to compress sparse arrays in result sets during compression.	SQL Engine V1	True	✓	✓	✓	
invariant-sql-correct-invalid-date	Whether to correct dates considered invalid since they are before 01-01-1753. When nullable, they are removed. Otherwise they are replaced by 01-01-1753.	SQL Engine V1	False	✓	✓	✓	
invariant-sql-forward-filters-to-data-containers	Whether to forward filters to data containers.	SQL Engine V1	True	✓	✓	✓	
invariant-sql-share-byte-arrays	Whether to share the memory used by identical byte arrays in result sets during compression.	SQL Engine V1	True	✓	✓	✓	

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Driver's File	Set from Log On
invantive-sql-share-strings	Whether to share the memory used by identical strings in result sets during compression.	SQL Engine V1	True	✓	✓	✓	
invantive-sql-shuffle-fetch-results-data-containers	Whether to shuffle results fetched from data containers.	SQL Engine V1	False	✓	✓	✓	
invantive-use-cache	Whether to cache the results of a query.	SQL Engine V1	True	✓	✓	✓	
join-set-points-per-request	Maximum number of values in a request when executing a join set.	OData	60	✓	✓	✓	
limit-partition-calls-left	Minimum number of remaining API calls on a partition towards a hard limit. When below, an error is raised.	OData	500	✓	✓	✓	
log-native-calls-to-disk-max-events	Maximum number of call events to register from last activation.	Shared		✓	✓	✓	
log-native-calls-to-disk-max-seconds	Maximum number of seconds to register calls from last activation.	Shared		✓	✓	✓	
log-native-calls-to-disk-on-error	Registers native calls to data container backend as disk files when the call raised an error.	Shared	False	✓	✓	✓	
log-native-calls-to-disk-on-success	Registers native calls to data container backend as disk files when the call raised no error.	Shared	False	✓	✓	✓	
log-native-calls-to-trace	Log native calls to data container backend on the trace.	Shared	False	✓	✓	✓	
maximum-discovered-column-count	Maximum number of discovered columns. An error will be generated when the column exceeds this value.		250	✓	✓	✓	✓
maximum-length-identifiers	Non-default maximum length in characters of identifier names.	Shared		✓	✓	✓	
max-odata-filters	Maximum number of OData filter elements.	OData	100	✓	✓	✓	
max-url-length-accepted	The maximum accepted URL length before raising an error.	Shared	8000	✓	✓	✓	
max-url-length-desired	The maximum desired URL length.	Shared	8000	✓	✓	✓	
metadata-cache-max-age-sec	Maximum acceptable age in seconds for re-use of metadata.	OData		✓	✓	✓	
oauth-unauthorized-max-tries	Maximum number of tries when an OAuth exception occurs.	OData	2	✓	✓	✓	
oauth-unauthorized-sleep-initial-ms	Initial sleep in milliseconds between OAuth reauthentication tries when the OAuth authentication fails.	OData	10000	✓	✓	✓	
oauth-unauthorized-sleep-max-ms	Maximum sleep in milliseconds between OAuth reauthentication	OData	1000	✓	✓	✓	

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Driver's File	Set from Log On
	tries when the OAuth authentication fails.						
oauth-unauthorized-sleep-multiplicator	Multiplication factor for sleep between OAuth reauthentication tries when the OAuth authentication fails.	OData	2	✓	✓	✓	
page-size-rows	Number of rows to retrieve per page.	Visma.net Financials	100	✓	✓	✓	
partition-slot-based-rate-limit-length-ms	Total length in milliseconds across all slots of a partition-based rate limit.	Shared	60000	✓		✓	
partition-slot-based-rate-limit-slots	Number of slots per partition-based rate limit. Null means no slot-based rate limit.	Shared		✓		✓	
pre-request-delay-ms	Pre-request delay in milliseconds per request.	Shared	0	✓	✓	✓	
requested-page-size	Preferred number of rows to exchange per round trip; only effective on limited platforms such as AFAS Online.	Shared		✓	✓	✓	
requests-parallel-max	Maximum number of parallel data requests from individual partitions on the data container.	Shared	32	✓	✓	✓	
simulate-http-400-errors	Simulate HTTP 400 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
simulate-http-400-errors-percentage	Percentage of simulated HTTP 400 errors when exchanging results with the HTTP endpoint.		0	✓	✓	✓	
simulate-http-401-errors	Simulate HTTP 401 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
simulate-http-401-errors-percentage	Percentage of simulated HTTP 401 errors when exchanging results with the HTTP endpoint.		0	✓	✓	✓	
simulate-http-403-errors	Simulate HTTP 403 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
simulate-http-403-errors-percentage	Percentage of simulated HTTP 403 errors when exchanging results with the HTTP endpoint.		0	✓	✓	✓	
simulate-http-408-errors	Simulate HTTP 408 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
simulate-http-408-errors-percentage	Percentage of simulated HTTP 408 errors when exchanging results with the HTTP endpoint.		0	✓	✓	✓	
simulate-http-429-errors	Simulate HTTP 429 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Drivers File	Set from Log On
simulate-http-429-errors-percentage	Percentage of simulated HTTP 429 errors when exchanging results with the HTTP endpoint.		0	✓	✓	✓	
simulate-http-500-errors	Simulate HTTP 500 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
simulate-http-500-errors-percentage	Percentage of simulated HTTP 500 errors when exchanging results with the HTTP endpoint.		0	✓	✓	✓	
simulate-http-502-errors	Simulate HTTP 502 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
simulate-http-502-errors-percentage	Percentage of simulated HTTP 502 errors when exchanging results with the HTTP endpoint.		0	✓	✓	✓	
simulate-http-503-errors	Simulate HTTP 503 errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
simulate-http-503-errors-percentage	Percentage of simulated HTTP 503 errors when exchanging results with the HTTP endpoint.		0	✓	✓	✓	
simulate-http-protocol-errors	Simulate HTTP protocol errors when exchanging results with the HTTP endpoint.		False	✓	✓	✓	
simulate-http-protocol-errors-percentage	Percentage of simulated HTTP protocol errors when exchanging results with the HTTP endpoint.		0	✓	✓	✓	
simulate-http-timeout-errors	Simulate HTTP timeout errors when exchanging results with the HTTP endpoint..		False	✓	✓	✓	
simulate-http-timeout-errors-percentage	Percentage of simulated HTTP timeout errors when exchanging results with the HTTP endpoint.		0	✓	✓	✓	
slot-based-rate-limit-length-ms	Total length in milliseconds across all slots of a slot-based rate limit.	Shared	60000	✓		✓	
slot-based-rate-limit-slots	Number of slots of a slot-based rate limit. Null means no slot-based rate limit.	Shared		✓		✓	
standardize-identifiers	Rewrite all identifiers to the preferred standards as configured by standardize-identifiers-casing and maximum-length-identifiers.	Shared	True	✓	✓	✓	
standardize-identifiers-casing	Rewrite all identifiers to the recommended standard platform-specific casing when changing a data model on a case-dependent platform.	Shared	True	✓	✓	✓	
swagger-specification-file	The Swagger file path, such as C:\temp\swagger.json.			✓	✓	✓	✓

Code	Description	Origin	Default Value	Set from Connection String	Set from Set SQL-Statement	Set from Driver's File	Set from Log On
swagger-specification-http-disk-cache-max-age-sec	Maximum acceptable age in seconds for use of Swagger specification data in the HTTP disk cache.		86400	✓	✓	✓	
swagger-specification-url	The Swagger URL such as https://example.org/rest/swagger.json .			✓	✓	✓	✓
use-batch-insert	Whether to use batch insert.	OData	True	✓	✓	✓	
use-http-disk-cache-read	Whether to use HTTP responses from previous queries stored on disk to answer the current query.	Shared	False	✓	✓	✓	
use-http-disk-cache-write	Whether to memorize HTTP responses on disk.	Shared	False	✓	✓	✓	
use-http-memory-cache-read	Whether to use HTTP responses from previous queries stored in memory that can answer the current query.	OData	True	✓	✓	✓	
use-http-memory-cache-write	Whether to memorize HTTP responses from previous queries for use by future queries.	OData	True	✓	✓	✓

Label: General Ledger Account by Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariant SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function AccountByCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four

parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
accountCd	string	<input checked="" type="checkbox"/>		Return the Information from Chart of account for the specified AccountCD
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function AccountByCode are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
accountCD	string	Account Code	<input type="checkbox"/>	Mandatory field: The table & Account* & The unique identifier of the general ledger account in the system.
accountClass	string	Account Class	<input type="checkbox"/>	The table & Account class & Optional. The account class to which the account is assigned.
accountGroupCD	string	Account Group Code	<input type="checkbox"/>	The table & Account group & The account group (used in project management if the Projects module has been activated) that includes this account.
accountID	int32	Account ID	<input type="checkbox"/>	The table & AccountID & The Account ID is the actual ID that the account have in the database and are used in other tables as the relation between the Chart of accounts table and other tables.
active	boolean	Active	<input type="checkbox"/>	The table & Active & A check box that indicates that the account is active.

Name	Data Type	Label	Required	Documentation
analysisCode	string	Analysis Code	<input type="checkbox"/>	The table > Analysis code > A field that can be used for sorting and inquiries. Either enter in field or predfine in GL20253S.
cashAccount	boolean	Cash Account	<input type="checkbox"/>	The table > Cash account > A check box that indicates (if selected) that the account has a cash account or multiple cash accounts linked to it.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
currency	string	Currency	<input type="checkbox"/>	The table > Currency > Optional: This column appears only if support for multiple currencies has been activated for the system.
description	string	Description	<input type="checkbox"/>	The table > Description > An alphanumeric string of up to 30 characters that describes the account.
externalCode1	string	External Code 1	<input type="checkbox"/>	The table > External code 1 > A field that can be used for sorting and inquiries. Either enter in field or predfine in GL20251S.
externalCode2	string	External Code 2	<input type="checkbox"/>	The table > External code 2 > A field that can be used for sorting and inquiries. Either enter in field or predfine in GL20252S.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	This information is not visible in the window . It is collected from the system.
postOption	string	Post Option	<input type="checkbox"/>	The table > Post option > An option that defines how transactions created in other workspaces are posted to this account. Summary (default) or Detail.
publicCode1	int32	Public Code 1	<input type="checkbox"/>	The table > Public code 1 > The authorities valid code mapped to the account. Used for example in SAF-T and in some nationals reporting to the authorities.
taxCategory	string	Tax Category	<input type="checkbox"/>	The table > VAT category > A tax category that you define for the selected account. When you create a journal transaction manually in the GL301000 window , based on this VAT category, the taxable amount will be calculated for the journal entry.
type	string	Type	<input type="checkbox"/>	The table > Type > The type of account: Asset, Liability, Income, or Expense.

Name	Data Type	Label	Required	Documentation
useDefaultSub	boolean		<input type="checkbox"/>	The table > Use default sub > A check box that causes the system (if selected) to set the default subaccount as the Subaccount if the account is selected.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function BackgroundBackgroundApiOperationByrequestId. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
requestId	string	<input checked="" type="checkbox"/>		

Columns of Table Function

The columns of the table function BackgroundBackgroundApiOperationByrequestId are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contentLocation	string		<input type="checkbox"/>	The uri from where the client can get the response from the background API operation, if any is available.
errorMessage	string		<input type="checkbox"/>	Any error message during processing of background API operation request. Note that any

Name	Data Type	Label	Required	Documentation
				error response from the actual endpoint can be obtained by calling the ContentLocation address from the webhook notification response or the background state document.
finishedUtc	datetime		<input type="checkbox"/>	Time when background API operation was finished processing
hasRequestContent	boolean		<input type="checkbox"/>	Indicates whether or not the background API operation request has a request content.
hasResponseContent	boolean		<input type="checkbox"/>	Indicates whether or not the background API operation ended with a response content. Value is updated only when background API operation is finished.
id	string	ID	<input type="checkbox"/>	Identifies a started background API operation
originalUri	string		<input type="checkbox"/>	The endpoint that was requested to be processed as a background API operation.
receivedUtc	datetime		<input type="checkbox"/>	Time when background API operation was requested
reference	string		<input type="checkbox"/>	
responseHeaders	string		<input type="checkbox"/>	Any response headers from the finished background API operation.
startedUtc	datetime		<input type="checkbox"/>	Time when processing of background API operation was started
status	string	Status	<input type="checkbox"/>	Current status of a background API operation. Possible values are 'Started', 'Finished' and 'Failed'.
statusCode	int32		<input type="checkbox"/>	The Http Status Code of the finished background API operation. Value is 0 when operation is not done.
webhookAddress	string		<input type="checkbox"/>	The webhook uri used to notify when background API operation is finished, or 'none' if no notification is configured

6.1.2 BackgroundBackgroundApiOperationContentByrequestId

Gets the response content, if any, of a previously started background API operation that has finished

8 Schema: Budget

8.1 Tables

8.1.1 BudgetPeriods: Visma.net Financials Budget Periods

Get a range of General Ledger Budget Figures - ScreenId=GL302010

Catalog: VismaNet

Schema: Budget

Label: Budget Periods

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function BudgetPeriods. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch	string	<input type="checkbox"/>		Mandatory. Filter by budgets Branch.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
financialYear	string	<input type="checkbox"/>		The budgets financial year.
greaterThanValue	string	<input type="checkbox"/>		Filter by from date.

10.1.4 CashAccounts: Visma.net Financials Cash Accounts

Get all Cash Accounts - ScreenId=CA202000

Catalog: VismaNet

Schema: CashAccount

Label: Cash Accounts

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CashAccounts. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

11.1.3 CashSaleByDocumentNumber: Visma.net Financials Cash Sale by Document Number

Get a specific Cash Sale

Catalog: VismaNet

Schema: CashSale

Label: Cash Sale by Document Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CashSaleByDocumentNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
documentNumber	string	<input checked="" type="checkbox"/>		Identifies the Cash Sale Document
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint

Name	Data Type	Required	Default Value	Documentation
				itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CashSaleByDocumentNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section >

status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CashSaleLines are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class & The name of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account & The account number.
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount_1	double		<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears

Name	Data Type	Label	Required	Documentation
				when the document status is Open.
amount	double	Amount	<input type="checkbox"/>	Amount > The amount after the discount has been applied. The value of this read-only box is calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_1	double		<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.

Name	Data Type	Label	Required	Documentation
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
cost	double	Cost	<input type="checkbox"/>	Cost > The total cost of the line in default currency. The value will always be 0 for unreleased documents.
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
deferralCode	string		<input type="checkbox"/>	The deferral code assigned to the stock item or non-stock item specified in this document line. Upon release of the document, the system generates a deferralschedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		<input type="checkbox"/>	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It shows the identifier of the deferral schedule associated with the original Cash sale document.
description	string	Description	<input type="checkbox"/>	Transaction descr. > Any brief comment relevant to the transaction. The alphanumeric string may contain up to 30 characters.

Name	Data Type	Label	Required	Documentation
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, w hich the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountAmount	double		<input type="checkbox"/>	Discount amount > The amount of the line-level discount that has been applied manually or automatically to this line. The system selects the Manual Discount check box and calculates the line amount after you have entered the discount amount manually and save your changes or added a new line.
discountAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.
discountCode	string	Discount Code	<input type="checkbox"/>	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent > The percent of the line-level discount that has been applied manually or automatically. The system selects the Manual Discount check box and calculates the discount amount after you have entered the percent manually and saved your changes or added a new line.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date w hen the customer ledger document w as created. By default, for a new document, it is the current business date, but you can change the date.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off

Name	Data Type	Label	Required	Documentation
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
externalLink	string		<input type="checkbox"/>	
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
inventoryNumber	string	Inventory Number	<input type="checkbox"/>	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier > The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>

Name	Data Type	Label	Required	Documentation
vatCode_id	string	VAT Code ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax with the Include in VAT Exempt Total check box selected on the Taxes form. This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

11.1.5 CashSaleLinesByDocumentNumber: Visma.net Financials Cash Sales Lines by Document Number

Get a specific Cash Sale

Catalog: VismaNet

Schema: CashSale

Label: Cash Sales Lines by Document Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CashSaleLinesByDocumentNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
documentNumber	string	<input checked="" type="checkbox"/>		Identifies the Cash Sale Document
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CashSaleLinesByDocumentNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class > The name of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account > The account number.

Name	Data Type	Label	Required	Documentation
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.

vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

11.1.6 CashSales: Visma.net Financials Cash Sales

Get a range of Cash Sales - ScreenId=AR304000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2021-October:Added forced pagination

Catalog: VismaNet

Schema: CashSale

Label: Cash Sales

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CashSales. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

12.1.2 CashTransactionDetails: Visma.net Financials Cash Transaction Details

Get all Transaction - ScreenID=CA304000

Catalog: VismaNet

Schema: CashTransaction

Label: Cash Transaction Details

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CashTransactionDetails. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a

pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of record. Use format: YYYY-MM-DD HH:MM (date and time) to filter by date
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		Value to be used for filtering lastModifiedDateTime value.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions.

Columns of Table Function

12.1.5 CashTransactionTaxDetails: Visma.net Financials Cash Transaction Tax Details

Get all Transaction - ScreenID=CA304000

Catalog: VismaNet

Schema: CashTransaction

Label: Cash Transaction Tax Details

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CashTransactionTaxDetails. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of record. Use format: YYYY-MM-DD HH:MM (date and time) to filter by date
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		Value to be used for filtering lastModifiedDateTime value.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions.

Columns of Table Function

The columns of the table function CashTransactionTaxDetails are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
amount	double	Amount	<input type="checkbox"/>	The top part > Amount >; The amount of the transaction.
cashAccount_description	string	Cash Account Description	<input type="checkbox"/>	Name of item/description

position	string	Position	<input type="checkbox"/>	The top part > Job title > The contact's job title or position.
sameAsAccount	boolean	Same as Account	<input type="checkbox"/>	The Details tab > Same as in account > A check box that indicates (if selected) that the contact's address is the same as the address of the business account.
title	string	Title	<input type="checkbox"/>	The top part > First name > The contact's courtesy title.
web	string	Web	<input type="checkbox"/>	The Details tab > Contact section > Web > The website of the contact, if any.

14 Schema: Context

14.1 Tables

14.1.1 AvailableContexts: Visma.net Financials Companies

Get the companies available for this token.

Catalog: VismaNet

Schema: Context

Label: Companies

This is a read-only table. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Table Columns

The columns of the table AvailableContexts are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
id	int64	ID	<input type="checkbox"/>	
name	string	Name	<input type="checkbox"/>	
type	string	Type	<input type="checkbox"/>	

14.1.2 CompanyInfo: Visma.net Financials Company by ID

Get company details by company ID.

Catalog: VismaNet

Schema: Context

Label: Company by ID

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CompanyInfo. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
companyId	int64	<input checked="" type="checkbox"/>		

Columns of Table Function

The columns of the table function CompanyInfo are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
companyAddress1	string	Address Line 1	<input type="checkbox"/>	
companyAddress2	string	Address Line 2	<input type="checkbox"/>	
companyName	string	Name	<input type="checkbox"/>	
customerInfo_customerOrganizationNumber	string		<input type="checkbox"/>	
customerInfo_parentCustomerId	int64		<input type="checkbox"/>	
customerInfo_parentCustomerName	string		<input type="checkbox"/>	
distributorInfo_distributorId	int64		<input type="checkbox"/>	
distributorInfo_distributorName	string		<input type="checkbox"/>	
organizationNumber	string	Organization Number	<input type="checkbox"/>

18.1.2 CreditNoteApplicationsByCreditNoteNumber: Visma.net Financials Credit Note Applications by Credit Note Number

Get a specific Credit Note - Method is deprecated start using the new method in endpoint Customer Credit Note

Catalog: VismaNet

Schema: CreditNote

Label: Credit Note Applications by Credit Note Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CreditNoteApplicationsByCreditNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
creditNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Credit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountPaid	double	Amount Paid	<input type="checkbox"/>	
applicationDate	datetime	Application Date	<input type="checkbox"/>	
applicationPeriod	string	Application Period	<input type="checkbox"/>	
balance_1	double		<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balance	double	Balance	<input type="checkbox"/>	
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system

Name	Data Type	Label	Required	Documentation
				calculates based on the specified credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
cashDiscountTaken	double		<input type="checkbox"/>	
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window .
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerCD	string		<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This

Name	Data Type	Label	Required	Documentation
				field is applicable if the amount is given in a another currency than your default.
docType	string	Document Type	<input type="checkbox"/>	
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date when the customer ledger document was created. By default, for a new document, it is the current business date, but you can change the date.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
externalReference	string	External Reference	<input type="checkbox"/>	
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold_1	boolean		<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
hold	boolean	Hold	<input type="checkbox"/>	
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.

subaccount_subaccountNumber	string	Sub Account Number	<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax with the Include in VAT Exempt Total check box selected on the Taxes form. This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.
voided	boolean		<input type="checkbox"/>	

18.1.3 CreditNoteAttachments: Visma.net Financials Credit Note Attachments

Get a range of Credit Notes - Method is deprecated start using the new method in endpoint Customer Credit Note

Catalog: VismaNet

Schema: CreditNote

Label: Credit Note Attachments

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter

case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CreditNoteAttachments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=<) OR after and including (=>) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and

Name	Data Type	Required	Default Value	Documentation
				executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max

Name	Data Type	Required	Default Value	Documentation
				page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CreditNoteAttachments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.

Name	Data Type	Label	Required	Documentation
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be

Name	Data Type	Label	Required	Documentation
				changed if the Allow Currency Override check box is selected in the AR303000 window .
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. & The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part & Customer project no. & The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part & External reference & The external reference used in AutoInvoice.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part & Detail total & The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part & Discount total & The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part & Discount total & The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part & Date* & The date when the customer ledger document was created. By default, for a new document, it is the current business date, but you can change the date.
documentType	string	Document Type	<input type="checkbox"/>	The top part & Type & The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
externalReference	string	External Reference	<input type="checkbox"/>	
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part & Hold & A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.

Name	Data Type	Label	Required	Documentation
id	guid	ID	<input type="checkbox"/>	The ID of the attachment

18.1.4 CreditNoteAttachmentsByNumber: Visma.net Financials Credit Note Attachments by Number

Get a specific Credit Note - Method is deprecated start using the new method in endpoint Customer Credit Note

Catalog: VismaNet

Schema: CreditNote

Label: Credit Note Attachments by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CreditNoteAttachmentsByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
creditNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Credit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CreditNoteAttachmentsByNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount	double	Amount	<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part & Balance & For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. & The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. & The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab & The payment information section & Cash account & The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part & Cash discount & The cash discount amount that has been or will be taken on the document, which the system

Name	Data Type	Label	Required	Documentation
				calculates based on the specified credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in another currency than your default.

Name	Data Type	Label	Required	Documentation
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date when the customer ledger document was created. By default, for a new document, it is the current business date, but you can change the date.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
externalReference	string	External Reference	<input type="checkbox"/>	
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier > The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address > A check box that indicates (if selected)

Name	Data Type	Label	Required	Documentation
				that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText	string	Invoice Text	<input type="checkbox"/>	The top part > Invoice text > Any user-provided description of the customer ledger document.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
name	string	Name	<input type="checkbox"/>	The name of the attachment.
note	string	Note	<input type="checkbox"/>	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The top part > Orig invoice date > The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences. By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. > The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
paymentReference	string	Payment Reference	<input type="checkbox"/>	//The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in

creditNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Credit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CreditNoteInvoiceLineAttachmentsByNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class > The identifier of the account class.

Name	Data Type	Label	Required	Documentation
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class > The name of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account > The account number.
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount_1	double		<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amount	double	Amount	<input type="checkbox"/>	Amount > The amount after the discount has been applied. The value of this read-only box is calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_1	double		<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.

Name	Data Type	Label	Required	Documentation
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
cost	double	Cost	<input type="checkbox"/>	Cost > The total cost of the line in default currency. The value will always be 0 for unreleased documents.
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.

Name	Data Type	Label	Required	Documentation
deferralCode	string		<input type="checkbox"/>	The deferral code assigned to the stock item or non-stock item specified in this document line. Upon release of the document, the system generates a deferral schedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		<input type="checkbox"/>	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It shows the identifier of the deferral schedule associated with the original Cash sale document.
description	string	Description	<input type="checkbox"/>	Transaction descr. > Any brief comment relevant to the transaction. The alphanumeric string may contain up to 30 characters.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountAmount	double		<input type="checkbox"/>	Discount amount > The amount of the line-level discount that has been applied manually or automatically to this line. The system selects the Manual Discount check box and calculates the line amount after you have entered the discount amount manually and save your changes or added a new line.
discountAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.
discountCode	string	Discount Code	<input type="checkbox"/>	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent > The percent of the line-level discount that has been applied manually or automatically. The system selects the Manual Discount check box and calculates the discount amount after you have entered the percent manually

Name	Data Type	Label	Required	Documentation
				andsaved your changes or added a new line.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
externalLink	string		<input type="checkbox"/>	
externalReference	string	External Reference	<input type="checkbox"/>	
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to w hich the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document w ith the On Hold status may be edited and cannot be released.
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
inventoryNumber	string	Inventory Number	<input type="checkbox"/>	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique tw o-letter country ID

Name	Data Type	Label	Required	Documentation
				according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* & The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier & The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier & The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address & A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode & The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText	string	Invoice Text	<input type="checkbox"/>	The top part & Invoice text & Any user-provided description of the customer ledger document.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.
lineNumber	int32	Line Number	<input type="checkbox"/>	Line no. & A counter of lines in the overview of cash sales document overview .
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier & The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier & The displayed name
manualAmount	double	Manual Amount	<input type="checkbox"/>	Manual amount & a check box indicating that the amount has been entered manually.
manualAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Manual amount in your default currency. This field is applicable if the amount is given in another currency than your default.

Name	Data Type	Label	Required	Documentation
manualDiscount	boolean		<input type="checkbox"/>	Manual discount & A check box that indicates (if selected) that the discount has been applied manually. If you clear the check box, the system clears entered discount percent, or discount amount, or selected discount code.
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
name	string	Name	<input type="checkbox"/>	The name of the attachment.
note_1	string		<input type="checkbox"/>	Icon Notes on top of the window & Pop-up window for providing any user-defined text connected to the document.
note	string	Note	<input type="checkbox"/>	Table & Icon Notes & Pop-up window for providing any user-defined text connected to the order.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The top part & Orig invoice date & The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences. By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. & The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
paymentReference	string	Payment Reference	<input type="checkbox"/>	///The top part & Payment ref. & The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
postPeriod	string	Post Period	<input type="checkbox"/>	The top part & Post period & The period to which the document should be posted. Format YYYYMM.
project_description	string	Project Description	<input type="checkbox"/>	Click on the magnifier. & The description.
project_id	string	Project ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
projectTask_description	string	Project Task Description	<input type="checkbox"/>	Click on the magnifier. & The description.
projectTask_id	string	Project Task ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
quantity	double	Quantity	<input type="checkbox"/>	Quantity & The quantity of items (goods or services) of a

Name	Data Type	Label	Required	Documentation
				particular type sold to the customer.
referenceNumber	string	Reference Number	<input type="checkbox"/>	The Top part & Ref. no. & The reference number of the customer ledger document in the system.
revision	int32	Revision	<input type="checkbox"/>	The version of the attachment.
salesPerson_1_description	string		<input type="checkbox"/>	Click on the magnifier. & The description.
salesPerson_1_id	string		<input type="checkbox"/>	Click on the magnifier. & The identifier.
salesperson	string		<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use Seller instead
salesPersonDescr	string	Sales Person Name	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
salesPersonID	int32	Sales Person ID	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
seller_description	string	Seller Description	<input type="checkbox"/>	Click on the magnifier. & The description.
seller_id	string	Seller ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
status	string	Status	<input type="checkbox"/>	The top part & Status & The status of the document, which can be one of the following: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
subaccount_active_1	boolean		<input type="checkbox"/>	Active & The status of the identifier.
subaccount_active	boolean		<input type="checkbox"/>	Active & The status of the identifier.
subaccount_description_1	string		<input type="checkbox"/>	Description & The description of the identifier.
subaccount_description	string	Subaccount Description	<input type="checkbox"/>	Description & The description of the identifier.
subaccount_errorInfo_1	string		<input type="checkbox"/>	
subaccount_errorInfo	string	Sub Account Error Message	<input type="checkbox"/>	
subaccount_lastModifiedDateTime_1	datetime		<input type="checkbox"/>	System generated information.
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	<input type="checkbox"/>	System generated information.
subaccount_metadata_maxPageSize_1	int64		<input type="checkbox"/>	
subaccount_metadata_maxPageSize	int64		<input type="checkbox"/>	
subaccount_metadata_totalCount_1	int64		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
subaccount_metadata_totalCount	int64		<input type="checkbox"/>	
subaccount_subaccountId_1	int32		<input type="checkbox"/>	SubID > The identifier of the subaccount.
subaccount_subaccountId	int32	Sub Account ID	<input type="checkbox"/>	SubID > The identifier of the subaccount.
subaccount_subaccountNumber_1	string		<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
subaccount_subaccountNumber	string	Sub Account Number	<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
unitPrice	double		<input type="checkbox"/>	Unit price > The unit price set for the item or service. If you want to update the unit price automatically to the current value (that is, the applicable sales or default price), you can use the Recalculate Prices and Discounts action. If you have modified the unit price and saved the document, the value will not be updated by the system if you change the document date.
unitPriceInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Unit price in your default currency. This field is applicable if the amount is given in another currency than your default.
uom	string	Unit of Measure	<input type="checkbox"/>	UoM > The unit of measure (UoM) for the item.
vatCode_description	string	VAT Code Description	<input type="checkbox"/>	Click on the magnifier. > The description.
vatCode_id	string	VAT Code ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax with the Include in VAT Exempt Total check box selected on the Taxes form. This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is

Name	Data Type	Label	Required	Documentation
				applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

18.1.7 CreditNoteInvoiceLines: Visma.net Financials Credit Note Invoice Lines

Get a range of Credit Notes - Method is deprecated start using the new method in endpoint Customer Credit Note

Catalog: VismaNet

Schema: CreditNote

Label: Credit Note Invoice Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CreditNoteInvoiceLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.

Name	Data Type	Required	Default Value	Documentation
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It w ill only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for w hen the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=<) OR after and including (=>) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint w ill be queued and executed in background. When the execution of the background operation is finished, the system w ill POST the response to the specified URL. The endpoint itself responds in this case w ith a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you w ant to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you w ant to see all attachments regarding this document.

vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

18.1.8 CreditNoteInvoiceLinesAttachments: Visma.net Financials Credit Note Invoice Line Attachments

Get a range of Credit Notes - Method is deprecated start using the new method in endpoint Customer Credit Note

Catalog: VismaNet

Schema: CreditNote

Label: Credit Note Invoice Line Attachments

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CreditNoteInvoiceLinesAttachments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (>), after (>), before and including (=<); OR after and including (=>) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		

Name	Data Type	Required	Default Value	Documentation
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..

skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future

Name	Data Type	Required	Default Value	Documentation
				versions. Use pagenumber and pagesize for pagination purposes. Pagenumber and pagesize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CreditNoteInvoiceLinesAttachments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class & The name of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account & The account number.
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount_1	double		<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.
amount	double	Amount	<input type="checkbox"/>	Amount & The amount after the discount has been applied. The value of this read-only box is calculated automatically by deducting the discount amount from the extended price.

Name	Data Type	Label	Required	Documentation
amountInCurrency_1	double		<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier

Name	Data Type	Label	Required	Documentation
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
cost	double	Cost	<input type="checkbox"/>	Cost > The total cost of the line in default currency. The value will always be 0 for unreleased documents.
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
deferralCode	string		<input type="checkbox"/>	The deferral code assigned to the stock item or non-stock item specified in this document line. Upon release of the document, the system generates a deferralschedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		<input type="checkbox"/>	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It shows the identifier of the deferral schedule associated with the original Cash sale document.
description	string	Description	<input type="checkbox"/>	Transaction descr. > Any brief comment relevant to the transaction. The alphanumeric string may contain up to 30 characters.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.

Name	Data Type	Label	Required	Documentation
discountAmount	double		<input type="checkbox"/>	Discount amount > The amount of the line-level discount that has been applied manually or automatically to this line. The system selects the Manual Discount check box and calculates the line amount after you have entered the discount amount manually and save your changes or added a new line.
discountAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.
discountCode	string	Discount Code	<input type="checkbox"/>	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent > The percent of the line-level discount that has been applied manually or automatically. The system selects the Manual Discount check box and calculates the discount amount after you have entered the percent manually and saved your changes or added a new line.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date when the customer ledger document was created. By default, for a new document, it is the current business date, but you can change the date.

18.1.9 CreditNoteInvoiceLinesByNumber: Visma.net Financials Credit Note Invoice Lines by Number

Get a specific Credit Note - Method is deprecated start using the new method in endpoint Customer Credit Note

Catalog: VismaNet

Schema: CreditNote

Label: Credit Note Invoice Lines by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CreditNoteInvoiceLinesByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
creditNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Credit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CreditNoteInvoiceLinesByNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class > The name of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.

Name	Data Type	Label	Required	Documentation
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account & The account number.
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount_1	double		<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amount	double	Amount	<input type="checkbox"/>	Amount & The amount after the discount has been applied. The value of this read-only box is calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_1	double		<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part & Balance & For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. & The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. & The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. & The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. & The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab & The payment information section &

Name	Data Type	Label	Required	Documentation
				Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.

				YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CreditNotes are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given

Name	Data Type	Label	Required	Documentation
				in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window .
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date when the customer ledger document was created. By default, for a new document, it is the current business date, but you can change the date.

Name	Data Type	Label	Required	Documentation
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
externalReference	string	External Reference	<input type="checkbox"/>	
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier > The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText	string	Invoice Text	<input type="checkbox"/>	The top part > Invoice text > Any user-provided description of the customer ledger document.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
note	string	Note	<input type="checkbox"/>	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The top part > Orig invoice date > The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences. By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. > The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
paymentReference	string	Payment Reference	<input type="checkbox"/>	//The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
postPeriod	string	Post Period	<input type="checkbox"/>	The top part > Post period > The period to which the document should be posted. Format YYYYMM.
project_description	string	Project Description	<input type="checkbox"/>	Click on the magnifier. > The description.

Name	Data Type	Label	Required	Documentation
project_id	string	Project ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
referenceNumber	string	Reference Number	<input type="checkbox"/>	The Top part > Ref. no. > The reference number of the customer ledger document in the system.
salesPerson_description	string	Sales Person Description	<input type="checkbox"/>	Click on the magnifier. > The description.
salesPerson_id	string	Sales Person ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
salesPersonDescr	string	Sales Person Name	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
salesPersonID	int32	Sales Person ID	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
status	string	Status	<input type="checkbox"/>	The top part > Status > The status of the document, which can be one of the following: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
subaccount_active	boolean		<input type="checkbox"/>	Active > The status of the identifier.
subaccount_description	string	Subaccount Description	<input type="checkbox"/>	Description > The description of the identifier.
subaccount_errorInfo	string	Sub Account Error Message	<input type="checkbox"/>	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	<input type="checkbox"/>	System generated information.
subaccount_metadata_maxPageSize	int64		<input type="checkbox"/>	
subaccount_metadata_totalCount	int64		<input type="checkbox"/>	
subaccount_subaccountId	int32	Sub Account ID	<input type="checkbox"/>	SubID > The identifier of the subaccount.
subaccount_subaccountNumber	string	Sub Account Number	<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax with the Include in VAT Exempt Total check box selected on the Taxes form. This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.

Name	Data Type	Label	Required	Documentation
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

19 Schema: CreditTerm

19.1 Tables

19.1.1 CreditTermRecordInstalmentsSchedule: Visma.net Financials Credit Term Record Instalment Schedules

Get a range of credit terms - ScreenId=CS206500

Catalog: VismaNet

Schema: CreditTerm

Label: Credit Term Record Instalment Schedules

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CreditTermRecordInstalmentsSchedule. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the

default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		System retrieved information for created date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.

isUsedForAccounting	boolean		<input type="checkbox"/>	Identify if is used for accounting.
symbol	string		<input type="checkbox"/>	Currency symbol.

20.1.2 CurrencyById: Visma.net Financials Currency by ID

Get a specific Currency - ScreenId=CM202000

Catalog: VismaNet

Schema: Currency

Label: Currency by ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CurrencyById. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
curlyd	string	<input checked="" type="checkbox"/>		Returns data for the selected CurrencyId

Name	Data Type	Required	Default Value	Documentation
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CurrencyById are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
decimalPrecision	int32		<input type="checkbox"/>	Decimal precision.
description	string	Description	<input type="checkbox"/>	Currency description.
id	string	ID	<input type="checkbox"/>	Currency Id.
isBaseCurrency	boolean		<input type="checkbox"/>	Identify if the currency is the base currency.
isUsedForAccounting	boolean		<input type="checkbox"/>	Identify if it is used for accounting.
symbol	string		<input type="checkbox"/>	Currency symbol.

23.1.2 CustomerAttributesByCode: Visma.net Financials Customer Attributes by Code

Get a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Attributes by Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerAttributesByCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
customerCd	string	<input checked="" type="checkbox"/>		Identifies the customer
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerAttributesByCode are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
acceptAutoInvoices	boolean	Accept Auto-invoices	<input type="checkbox"/>	Invoicing settings > Print and email settings section > Send invoices to AutoInvoice > Select this check box if you are using AutoInvoice and want to send invoices directly to this service.
accountReference	string	Account Reference	<input type="checkbox"/>	General information tab > Main contact section > Account ref. > Your company's account number in the customer's system.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
corporatedId	string	Corporate ID	<input type="checkbox"/>	Delivery settings tab > Default location settings section > Corporate ID > The customers

Name	Data Type	Label	Required	Documentation
				company ID, associated with the location.
createdDateTime	datetime	Created	<input type="checkbox"/>	Information collected from the system. Not visible on the screen.
creditDaysPastDue	int32	Credit Days Past Due	<input type="checkbox"/>	General information tab > Credit verification rules section > Credit days past due > The maximum number of days by which the customer payment may exceed the invoice date.
creditLimit	double	Credit Limit	<input type="checkbox"/>	The General information tab > Credit verification rules section > Credit limit > The amount, if applicable, that serves as a credit limit for the customer.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
creditVerification	string	Credit Verification	<input type="checkbox"/>	The General information tab > Credit verification rules > Credit verification > The credit rule applied to this customer. The following options are available: Days past due, Credit limit, Limit and days past due, disabled.
currencyId	string	Currency ID	<input type="checkbox"/>	The General information tab > Financial settings section > Currency ID > The currency used in operations with the customer, which you can select from the list of currencies defined in the system.
customerClass_description	string	Customer Class Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerClass_id	string	Customer Class ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
defaultPaymentMethodId	string		<input type="checkbox"/>	Invoicing settings tab > Default payment method section > The default payment method.
deliveryAddress_addressId	int32	Delivery Address ID	<input type="checkbox"/>	
deliveryAddress_addressLine1	string	Delivery Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.

23.1.3 CustomerBalanceByCustomerCode: Visma.net Financials Customer Balance by Customer Code

Get a specific customer's balance - ScreenId=AR303000

Catalog: VismaNet

Schema: Customer

Label: Customer Balance by Customer Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerBalanceByCustomerCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
customerCd	string	<input checked="" type="checkbox"/>		Identifies the customer for which to return data
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a

Name	Data Type	Required	Default Value	Documentation
				reference to a state document for the background operation.

Columns of Table Function

The columns of the table function `CustomerBalanceByCustomerCode` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
balance	double	Balance	<input type="checkbox"/>	
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
customer_internalId	int32	Customer Internal ID	<input type="checkbox"/>	
customer_name	string	Customer Name	<input type="checkbox"/>	The name of the particular destination of the selected type.
customer_number	string	Customer Number	<input type="checkbox"/>	The identifier of the particular destination of the selected type.
lastModified	datetime	Last Modified	<input type="checkbox"/>	
totalDiscountPeriod	double	Total Discount in Period	<input type="checkbox"/>	
totalDiscountYear	double	Total Discount in Year	<input type="checkbox"/>	
totalLoan	double	Total Loan	<input type="checkbox"/>	
totalOrder	double	Total Order	<input type="checkbox"/>	
totalSalePeriod	double	Total Sale Period	<input type="checkbox"/>	
totalSaleYear	double	Total Sale Year	<input type="checkbox"/>	

23.1.4 CustomerBalances: Visma.net Financials Customer Balances

Get the balance for a range of customers

Catalog: VismaNet

Schema: Customer

Label: Customer Balances

The data in this table is partitioned per value of the `COMPANY_CODE` column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table `NativePlatformScalarRequests` to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function `CustomerBalances`. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a

pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. 23.1.6 CustomerByinternalID

Get a specific customer by internalID

Catalog: VismaNet

Schema: Customer

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerByinternalID. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.

Name	Data Type	Required	Default Value	Documentation
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

23.1.7 CustomerByinternalID_Attributes

Get a specific customer by internalID

Catalog: VismaNet

Schema: Customer

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerByinternalID_Attributes. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
internalID	int32	<input checked="" type="checkbox"/>		Identifies the customer

Columns of Table Function

The columns of the table function CustomerByinternalID_Attributes are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
acceptAutoInvoices	boolean	Accept Auto-invoices	<input type="checkbox"/>	Invoicing settings > Print and email settings section > Send invoices to AutoInvoice > Select this check box if you are using AutoInvoice and want to send invoices directly to this service.

23.1.8 CustomerByinternalID_DirectDebitLines

Get a specific customer by internalID

Catalog: VismaNet

Schema: Customer

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerByinternalID_DirectDebitLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
internalID	int32	<input checked="" type="checkbox"/>		Identifies the customer

Columns of Table Function

The columns of the table function CustomerByinternalID_DirectDebitLines are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
acceptAutoInvoices	boolean	Accept Auto-invoices	<input type="checkbox"/>	Invoicing settings & Print and email settings section & Send invoices to AutoInvoice & Select this check box if you are

Name	Data Type	Label	Required	Documentation
				using AutoInvoice and want to send invoices directly to this service.
accountReference	string	Account Reference	<input type="checkbox"/>	General information tab & Main contact section & Account ref. & Your company's account number in the customer's system.
bic	string	BIC	<input type="checkbox"/>	
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.

23.1.9 CustomerByinternalID_PaymentMethods

Get a specific customer by internalID

Catalog: VismaNet

Schema: Customer

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerByinternalID_PaymentMethods. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four

parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
internalID	int32	<input checked="" type="checkbox"/>		Identifies the customer

Columns of Table Function

The columns of the table function CustomerByinternalID_PaymentMethods are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
acceptAutoInvoices	boolean	Accept Auto-invoices	<input type="checkbox"/>	Invoicing settings > Print and email settings section > Send invoices to AutoInvoice > Select this check box if you are using AutoInvoice and want to send invoices directly to this service.
accountReference	string	Account Reference	<input type="checkbox"/>	General information tab > Main contact section > Account ref. > Your company's account number in the customer's system.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.

23.1.10 CustomerCashSaleLinesForCustomerByCustomerNumber: Visma.net Financials Customer Cash Sales Lines by Customer Number

Get a range of cash sales for a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Cash Sales Lines by Customer Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCashSaleLinesForCustomerByCustomerNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerNumber	string	<input checked="" type="checkbox"/>		Identifies the customer for which to return data
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Warden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.

Name	Data Type	Required	Default Value	Documentation
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=amp;lt;) OR after and including (=amp;gt;) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.

Name	Data Type	Required	Default Value	Documentation
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function

CustomerCashSaleLinesForCustomerByCustomerNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class > The name of the account class.

Name	Data Type	Label	Required	Documentation
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account & The account number.
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount_1	double		<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.
amount	double	Amount	<input type="checkbox"/>	Amount & The amount after the discount has been applied. The value of this read-only box is calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_1	double		<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part & Balance & For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. & The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. & The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. & The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. & The identifier.

Name	Data Type	Label	Required	Documentation
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
cost	double	Cost	<input type="checkbox"/>	Cost > The total cost of the line in default currency. The value will always be 0 for unreleased documents.
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
deferralCode	string		<input type="checkbox"/>	The deferral code assigned to the stock item or non-stock item specified in this document line. Upon release of the document, the system generates a deferralschedule (or

Name	Data Type	Label	Required	Documentation
				schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		<input type="checkbox"/>	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It shows the identifier of the deferral schedule associated with the original Cash sale document.
description	string	Description	<input type="checkbox"/>	Transaction descr. > Any brief comment relevant to the transaction. The alphanumeric string may contain up to 30 characters.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountAmount	double		<input type="checkbox"/>	Discount amount > The amount of the line-level discount that has been applied manually or automatically to this line. The system selects the Manual Discount check box and calculates the line amount after you have entered the discount amount manually and save your changes or added a new line.
discountAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.
discountCode	string	Discount Code	<input type="checkbox"/>	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent > The percent of the line-level discount that has been applied manually or automatically. The system selects the Manual Discount check box and calculates the discount amount after you have entered the percent manually and saved your changes or added a new line.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.

Name	Data Type	Label	Required	Documentation
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
externalLink	string		<input type="checkbox"/>	
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to w hich the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document w ith the On Hold status may be edited and cannot be released.
inventoryNumber	string	Inventory Number	<input type="checkbox"/>	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the

Name	Data Type	Label	Required	Documentation
				country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier > The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText	string	Invoice Text	<input type="checkbox"/>	The top part > Invoice text > Any user-provided description of the customer ledger document.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.
lineNumber	int32	Line Number	<input type="checkbox"/>	Line no. > A counter of lines in the overview of cash sales document overview .
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
manualAmount	double	Manual Amount	<input type="checkbox"/>	Manual amount > a check box indicating that the amount has been entered manually.
manualAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Manual amount in your default currency. This field is applicable if the amount is given in another currency than your default.
manualDiscount	boolean		<input type="checkbox"/>	Manual discount > A check box that indicates (if selected) that the discount has been applied manually. If you clear the check box, the system clears entered discount percent, or discount amount, or selected discount code.

Name	Data Type	Label	Required	Documentation
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
note_1	string		<input type="checkbox"/>	Icon Notes on top of the window & Pop-up window for providing any user-defined text connected to the document.
note	string	Note	<input type="checkbox"/>	Table & Icon Notes & Pop-up window for providing any user-defined text connected to the order.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The top part & Orig invoice date & The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences. By default, for a new document, it is the current business date, but you can change the date.

vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

23.1.11 CustomerCashSalesApplicationsByCustomerNumber: Visma.net Financials Customer Cash Sales Applications by Customer Number

Get a range of cash sales for a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Cash Sales Applications by Customer Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCashSalesApplicationsByCustomerNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerNumber	string	<input checked="" type="checkbox"/>		Identifies the customer for which to return data
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment,

Name	Data Type	Required	Default Value	Documentation
				VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=<) OR after and including (=>) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.

externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.

Name	Data Type	Required	Default Value	Documentation
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. Page number and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. Page number and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerCashSalesApplicationsByCustomerNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description

Name	Data Type	Label	Required	Documentation
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount	double	Amount	<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountPaid	double	Amount Paid	<input type="checkbox"/>	
applicationDate	datetime	Application Date	<input type="checkbox"/>	
applicationPeriod	string	Application Period	<input type="checkbox"/>	
balance_1	double		<input type="checkbox"/>	The top part & Balance & For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balance	double	Balance	<input type="checkbox"/>	
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. & The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. & The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab & The payment information section & Cash account & The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part & Cash discount & The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.

Name	Data Type	Label	Required	Documentation
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
cashDiscountTaken	double		<input type="checkbox"/>	
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerCD	string		<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in another currency than your default.

Name	Data Type	Label	Required	Documentation
docType	string	Document Type	<input type="checkbox"/>	
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date when the customer ledger document was created. By default, for a new document, it is the current business date, but you can change the date.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold_1	boolean		<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
hold	boolean	Hold	<input type="checkbox"/>	
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier > The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address > A check box that indicates (if selected)

Name	Data Type	Label	Required	Documentation
				that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText_1	string		<input type="checkbox"/>	The top part > Invoice text > Any user-provided description of the customer ledger document.
invoiceText	string	Invoice Text	<input type="checkbox"/>	
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
note	string	Note	<input type="checkbox"/>	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The top part > Orig invoice date > The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences. By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. > The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.

23.1.12 CustomerCashSalesForCustomerByCustomerNumber: Visma.net Financials Customer Cash Sales by Customer Number

Get a range of cash sales for a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Cash Sales by Customer Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function `CustomerCashSalesForCustomerByCustomerNumber`. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.

vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

23.1.13 CustomerClassAttributeDetails: Visma.net Financials Customer Class Attribute Details

Get Customer Classes - ScreenId=AR201000

Catalog: VismaNet

Schema: Customer

Label: Customer Class Attribute Details

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerClassAttributeDetails. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

23.1.18 CustomerDirectDebitLines: Visma.net Financials Customer Direct Debit Lines

Get a range of customers - ScreenId=AR303000

Catalog: VismaNet

Schema: Customer

Label: Customer Direct Debit Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDirectDebitLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
attributes	string	<input type="checkbox"/>		Attributes (additional information) connected to the entity. Examples: <code>{{base}}/customer?attributes={"AttributeID":"ValueID","AttributeID":"ValueID"}</code> <code>{{base}}/customer?attributes={"AttributeID":"ValueID1,ValueID2"}</code>
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
corporateld	string	<input type="checkbox"/>		Equals Corporate ID from Delivery settings tab.
createdDateTime	string	<input type="checkbox"/>		
createdDateTimeCondition	string	<input type="checkbox"/>		
email	string	<input type="checkbox"/>		Equals Email for customer.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and

Name	Data Type	Required	Default Value	Documentation
				executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandAccountInformation	boolean	<input type="checkbox"/>		
expandDirectDebit	boolean	<input type="checkbox"/>		Expand direct debit info
expandPaymentMethods	boolean	<input type="checkbox"/>		
greaterThanValue	string	<input type="checkbox"/>		This field does not work and has been deprecated. It will be removed in future versions.
lastModifiedDateTime	string	<input type="checkbox"/>		System retrieved information for last modified date and time.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for date, time and state/condition.
name	string	<input type="checkbox"/>		Equals Customer name.
numberToRead	int32	<input type="checkbox"/>		[This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.]Tells the service to return only {numberToRead} number of records.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
phone	string	<input type="checkbox"/>		Equals Phone 1 for customer.
skipRecords	int32	<input type="checkbox"/>		[This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.]Tells the service to return only records after the first {skipRecords} number of records.
status	string	<input type="checkbox"/>		Drop down and select Status. (Waarden: Active, OnHold, CreditHold, Inactive, OneTime)

Name	Data Type	Required	Default Value	Documentation
vatRegistrationId	string	<input type="checkbox"/>		Equals VAT registration ID from Delivery settings tab.

Columns of Table Function

The columns of the table function CustomerDirectDebitLines are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
acceptAutoInvoices	boolean	Accept Auto-invoices	<input type="checkbox"/>	Invoicing settings > Print and email settings section > Send invoices to AutoInvoice > Select this check box if you are using AutoInvoice and want to send invoices directly to this service.
accountReference	string	Account Reference	<input type="checkbox"/>	General information tab > Main contact section > Account ref. > Your company's account number in the customer's system.
bic	string	BIC	<input type="checkbox"/>	
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
corporateld	string	Corporate ID	<input type="checkbox"/>	Delivery settings tab > Default location settings section > Corporate ID > The customer's company ID, associated with the location.
createdDateTime	datetime	Created	<input type="checkbox"/>	Information collected from the system. Not visible on the screen.
creditDaysPastDue	int32	Credit Days Past Due	<input type="checkbox"/>	General information tab > Credit verification rules section > Credit days past due > The maximum number of days by which the customer payment may exceed the invoice date.
creditLimit	double	Credit Limit	<input type="checkbox"/>	The General information tab > Credit verification rules section > Credit limit > The amount, if applicable, that serves as a credit limit for the customer.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
creditVerification	string	Credit Verification	<input type="checkbox"/>	The General information tab > Credit verification rules > Credit verification > The credit rule applied to this customer. The following options are available:

Name	Data Type	Label	Required	Documentation
				Days past due, Credit limit, Limit and days past due, disabled.
currencyId	string	Currency ID	<input type="checkbox"/>	The General information tab > Financial settings section > Currency ID > The currency used in operations with the customer, which you can select from the list of currencies defined in the system.
customerClass_description	string	Customer Class Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerClass_id	string	Customer Class ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
dateOfSignature	datetime	Date of Signature	<input type="checkbox"/>	
defaultPaymentMethodId	string		<input type="checkbox"/>	Invoicing settings tab > Default payment method section > The default payment method.
deliveryAddress_addressId	int32	Delivery Address ID	<input type="checkbox"/>	
deliveryAddress_addressLine1	string	Delivery Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.
deliveryAddress_addressLine2	string	Delivery Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
deliveryAddress_addressLine3	string	Delivery Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
deliveryAddress_city	string	Delivery Address City	<input type="checkbox"/>	City > The city.
deliveryAddress_country_errorInfo	string		<input type="checkbox"/>	
deliveryAddress_country_id	string	Delivery Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
deliveryAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
deliveryAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
deliveryAddress_country_name	string	Delivery Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
deliveryAddress_country_id	string	Delivery Address Country ID	<input type="checkbox"/>	Click the magnifier > The identifier
deliveryAddress_country_name	string	Delivery Address Country Name	<input type="checkbox"/>	Click the magnifier > The displayed name
deliveryAddress_postalCode	string	Delivery Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
deliveryContact_attention	string	Delivery Contact Attention	<input type="checkbox"/>	Attention > The attention line as it is used in your customer's/supplier's/company's business letters. The intention of this line is to direct the letter to the right person if the letter is not

Name	Data Type	Label	Required	Documentation
				addressed to any specific person.
deliveryContact_contactId	int32	Delivery Contact ID	<input type="checkbox"/>	
deliveryContact_email	string	Delivery Contact Email Address	<input type="checkbox"/>	Email > The email address of the customer/supplier/company as a business entity.
deliveryContact_fax	string	Delivery Contact Fax	<input type="checkbox"/>	Fax > The fax number.
deliveryContact_name	string	Delivery Contact Name	<input type="checkbox"/>	Name > The legal name of to appear on the documents.
deliveryContact_phone1	string	Delivery Contact Phone 1	<input type="checkbox"/>	Phone 1 > The default phone number.
deliveryContact_phone2	string	Delivery Contact Phone 2	<input type="checkbox"/>	Phone 2 > An additional phone number.
deliveryContact_w eb	string	Delivery Contact Website	<input type="checkbox"/>	Web > The website of the company, if one exists.

23.1.19 CustomerDirectDebitLinesByCode: Visma.net Financials Customer Direct Debit Lines by Code

Get a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Direct Debit Lines by Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDirectDebitLinesByCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
customerCd	string	<input checked="" type="checkbox"/>		Identifies the customer
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerDirectDebitLinesByCode are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
acceptAutoInvoices	boolean	Accept Auto-invoices	<input type="checkbox"/>	Invoicing settings & Print and email settings section & Send invoices to AutoInvoice & Select this check box if you are using AutoInvoice and want to send invoices directly to this service.
accountReference	string	Account Reference	<input type="checkbox"/>	General information tab & Main contact section & Account ref. & Your company's account number in the customer's system.

Name	Data Type	Label	Required	Documentation
bic	string	BIC	<input type="checkbox"/>	
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
corporateld	string	Corporate ID	<input type="checkbox"/>	Delivery settings tab > Default location settings section > Corporate ID > The customers company ID, associated with the location.
createdDateTime	datetime	Created	<input type="checkbox"/>	Information collected from the system. Not visible on the screen.
creditDaysPastDue	int32	Credit Days Past Due	<input type="checkbox"/>	General information tab > Credit verification rules section > Credit days past due > The maximum number of days by which the customer payment may exceed the invoice date.
creditLimit	double	Credit Limit	<input type="checkbox"/>	The General information tab > Credit verification rules section > Credit limit > The amount, if applicable, that serves as a credit limit for the customer.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
creditVerification	string	Credit Verification	<input type="checkbox"/>	The General information tab > Credit verification rules > Credit verification > The credit rule applied to this customer. The following options are available: Days past due, Credit limit, Limit and days past due, disabled.
currencyId	string	Currency ID	<input type="checkbox"/>	The General information tab > Financial settings section > Currency ID > The currency used in operations with the customer, which you can select from the list of currencies defined in the system.
customerClass_description	string	Customer Class Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerClass_id	string	Customer Class ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
dateOfSignature	datetime	Date of Signature	<input type="checkbox"/>	
defaultPaymentMethodId	string		<input type="checkbox"/>	Invoicing settings tab > Default payment method section > The default payment method.
deliveryAddress_addressId	int32	Delivery Address ID	<input type="checkbox"/>	
deliveryAddress_addressLine1	string	Delivery Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.

Name	Data Type	Label	Required	Documentation
deliveryAddress_addressLine2	string	Delivery Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
deliveryAddress_addressLine3	string	Delivery Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
deliveryAddress_city	string	Delivery Address City	<input type="checkbox"/>	City > The city.
deliveryAddress_country_errorInfo	string		<input type="checkbox"/>	
deliveryAddress_country_id	string	Delivery Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
deliveryAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
deliveryAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
deliveryAddress_country_name	string	Delivery Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
deliveryAddress_county_id	string	Delivery Address County ID	<input type="checkbox"/>	Click the magnifier > The identifier
deliveryAddress_county_name	string	Delivery Address County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
deliveryAddress_postalCode	string	Delivery Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
deliveryContact_attention	string	Delivery Contact Attention	<input type="checkbox"/>	Attention > The attention line as it is used in your customer's/supplier's/company's business letters. The intention of this line is to direct the letter to the right person if the letter is not addressed to any specific person.
deliveryContact_contactId	int32	Delivery Contact ID	<input type="checkbox"/>	
deliveryContact_email	string	Delivery Contact Email Address	<input type="checkbox"/>	Email > The email address of the customer/supplier/company as a business entity.
deliveryContact_fax	string	Delivery Contact Fax	<input type="checkbox"/>	Fax > The fax number.
deliveryContact_name	string	Delivery Contact Name	<input type="checkbox"/>	Name > The legal name of to appear on the documents.
deliveryContact_phone1	string	Delivery Contact Phone 1	<input type="checkbox"/>	Phone 1 > The default phone number.
deliveryContact_phone2	string	Delivery Contact Phone 2	<input type="checkbox"/>	Phone 2 > An additional phone number.
deliveryContact_web	string	Delivery Contact Website	<input type="checkbox"/>	Web > The website of the company, if one exists.
eInvoiceContract_fInvoiceContractID	string		<input type="checkbox"/>	
eInvoiceContract_fInvoiceIntermediatorID	string		<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>

vatZone_metadata_totalCount	int64		<input type="checkbox"/>	

23.1.20 CustomerDocumentsForCustomerByCustomerNumber: Visma.net Financials Customer Documents by Customer Number

Gets a range of documents for a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Documents by Customer Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDocumentsForCustomerByCustomerNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerNumber	string	<input checked="" type="checkbox"/>		Identifies the customer for which to return data
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=amp;lt;) OR after and including (=amp;gt;) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.

Name	Data Type	Required	Default Value	Documentation
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.

Name	Data Type	Required	Default Value	Documentation
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerDocumentsForCustomerByCustomerNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.

23.1.21 CustomerInvoiceApplicationsByCustomerNumber: Visma.net Financials Customer Invoice Applications by Customer Number

Get a range of invoices for a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Invoice Applications by Customer Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceApplicationsByCustomerNumber. A value must be provided at all times for

required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerNumber	string	<input checked="" type="checkbox"/>		Identifies the customer for which to return data
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=amp;lt;) OR after and including (=amp;gt;) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with

Name	Data Type	Required	Default Value	Documentation
				a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in

Name	Data Type	Required	Default Value	Documentation
				accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pagenumber and pagesize for pagination purposes. Pagenumber and pagesize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerInvoiceApplicationsByCustomerNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
accountingCostRef	string		<input type="checkbox"/>	
amount	double	Amount	<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a

				NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerInvoiceAttachmentsForCustomerByCustomerNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
accountingCostRef	string		<input type="checkbox"/>	
amount	double	Amount	<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part & Balance & For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a

Name	Data Type	Label	Required	Documentation
				another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Mandatory field: The top part > Cash discount date * > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
contractDocRef	string		<input type="checkbox"/>	
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.

Name	Data Type	Label	Required	Documentation
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	string	VAT Zone Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerVatZone_id	string	VAT Zone ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, w hich the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	<input type="checkbox"/>	Mandatory field: The top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
dunningLetterDate	datetime	Dunning Letter Date	<input type="checkbox"/>	The Financial details tab > The dunning info section > Dunning letter date > The date of the last released dunning letter in w hich the document w as listed.

Name	Data Type	Label	Required	Documentation
dunningLetterLevel	int32	Dunning Letter Level	<input type="checkbox"/>	The Financial details tab > The dunning info section > Dunning level > The dunning level of the document.
endDate	datetime	End Date	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	
externalReference	string	External Reference	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier > The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.

Name	Data Type	Label	Required	Documentation
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText	string	Invoice Text	<input type="checkbox"/>	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible	boolean		<input type="checkbox"/>	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Sw edish markets)
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.

location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
name	string	Name	<input type="checkbox"/>	The name of the attachment.
note	string	Note	<input type="checkbox"/>	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
originatorDocRef	string		<input type="checkbox"/>	
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The top part > Orig invoice date > The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences.By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. > The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
paymentReference	string	Payment Reference	<input type="checkbox"/>	///The top part > Payment ref. > The reference number of the document, as automatically generated by the system in

Name	Data Type	Label	Required	Documentation
				accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
postPeriod	string	Post Period	<input type="checkbox"/>	The top part & Post period & The period to which the document should be posted. Format YYYYMM.
project_description	string	Project Description	<input type="checkbox"/>	Click on the magnifier. & The description.
project_id	string	Project ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
referenceNumber	string	Reference Number	<input type="checkbox"/>	The Top part & Ref. no. & The reference number of the customer ledger document in the system.
revision	int32	Revision	<input type="checkbox"/>	The version of the attachment.
roundingDiff	double	Rounding Difference	<input type="checkbox"/>	The top part & Rounding diff. & The difference between the original amount and the rounded amount.
salesPerson_description	string	Sales Person Description	<input type="checkbox"/>	Click on the magnifier. & The description.
salesPerson_id	string	Sales Person ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
salesPersonDescr	string	Sales Person Name	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
salesPersonID	int32	Sales Person ID	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
sendToAutoInvoice	boolean	Send to Auto-invoice	<input type="checkbox"/>	The Attachment tab & Send the file to AutoInvoice & The selected files will be attached to the invoice.
startDate	datetime	Start Date	<input type="checkbox"/>	
status	string	Status	<input type="checkbox"/>	The top part & Status & The status of the document, which can be one of the following: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
subaccount_active	boolean		<input type="checkbox"/>	Active & The status of the identifier.
subaccount_description	string	Subaccount Description	<input type="checkbox"/>	Description & The description of the identifier.
subaccount_errorInfo	string	Sub Account Error Message	<input type="checkbox"/>	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	<input type="checkbox"/>	System generated information.
subaccount_metadata_maxPageSize	int64		<input type="checkbox"/>	
subaccount_metadata_totalCount	int64		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
subaccount_subaccountId	int32	Sub Account ID	<input type="checkbox"/>	SubID > The identifier of the subaccount.
subaccount_subaccountNumber	string	Sub Account Number	<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax with the Include in VAT Exempt Total check box selected on the Taxes form. This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

23.1.23 CustomerInvoiceLinesAttachmentsByCustomerNumber: Visma.net Financials Customer Invoice Lines Attachments by Customer Number

Get a range of invoices for a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Invoice Lines Attachments by Customer Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter

case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceLinesAttachmentsByCustomerNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition

Name	Data Type	Label	Required	Documentation
discountCode	string	Discount Code	<input type="checkbox"/>	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent > The percent of the line-level discount that has been applied manually or automatically. The system selects the Manual Discount check box and calculates the discount amount after you have entered the percent manually and saved your changes or added a new line.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date when the customer ledger document was created. By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	<input type="checkbox"/>	Mandatory field: The top part > Due date* > The date when payment for the document is due, in accordance with the credit terms.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
dunningLetterDate	datetime	Dunning Letter Date	<input type="checkbox"/>	The Financial details tab > The dunning info section > Dunning letter date > The date of the last released dunning letter in which the document was listed.
dunningLetterLevel	int32	Dunning Letter Level	<input type="checkbox"/>	The Financial details tab > The dunning info section > Dunning level > The dunning level of the document.
endDate_1	datetime		<input type="checkbox"/>	
endDate	datetime	End Date	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	
externalLink	string		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
externalReference	string	External Reference	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
inventoryNumber	string	Inventory Number	<input type="checkbox"/>	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier > The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText	string	Invoice Text	<input type="checkbox"/>	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible_1	boolean		<input type="checkbox"/>	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
isRotRutDeductible	boolean		<input type="checkbox"/>	
itemType	string	Item Type	<input type="checkbox"/>	
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.
lineNumber	int32	Line Number	<input type="checkbox"/>	Line no. > A counter of lines in the overview of cash sales document overview .
lineType	string	Line Type	<input type="checkbox"/>	Transaction line type.Possible Values:-> Inventory = "G";-> NonInventory = "GN";-> MiscCharge = "M";-> Freight = "FR";-> Discount = "DS";-> Reallocation = "RA";
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
manualAmount	double	Manual Amount	<input type="checkbox"/>	Manual amount > a check box indicating that the amount has been entered manually.
manualAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Manual amount in your default currency. This field is applicable if the amount is given in another currency than your default.
manualDiscount	boolean		<input type="checkbox"/>	Manual discount > A check box that indicates (if selected) that the discount has been applied manually.If you clear the check box, the system clears entered discount percent,or discount amount, or selected discount code.
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
name	string	Name	<input type="checkbox"/>	The name of the attachment.

Name	Data Type	Label	Required	Documentation
note_1	string		<input type="checkbox"/>	Icon Notes on top of the window & Pop-up window for providing any user-defined text connected to the document.
note	string	Note	<input type="checkbox"/>	Table & Icon Notes & Pop-up window for providing any user-defined text connected to the order.
originatorDocRef	string		<input type="checkbox"/>	
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The top part & Orig invoice date & The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences. By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. & The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
paymentReference	string	Payment Reference	<input type="checkbox"/>	///The top part & Payment ref. & The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
postPeriod	string	Post Period	<input type="checkbox"/>	The top part & Post period & The period to which the document should be posted. Format YYYYMM.

vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The top part & VAT taxable total & The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part & VAT total & The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

23.1.24 CustomerInvoicesForCustomerByCustomerNumber: Visma.net Financials Customer Invoices by Customer Number

Get a range of invoices for a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Invoices by Customer Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoicesForCustomerByCustomerNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerNumber	string	<input checked="" type="checkbox"/>		Identifies the customer for which to return data
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)

Name	Data Type	Required	Default Value	Documentation
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=<) OR after and including (=>) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with

Name	Data Type	Required	Default Value	Documentation
				NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerInvoicesForCustomerByCustomerNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item

Name	Data Type	Label	Required	Documentation
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
accountingCostRef	string		<input type="checkbox"/>	
amount	double	Amount	<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .if the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Mandatory field: The top part > Cash discount date * > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given

Name	Data Type	Label	Required	Documentation
				in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
contractDocRef	string		<input type="checkbox"/>	
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window .
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	string	VAT Zone Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerVatZone_id	string	VAT Zone ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.

Name	Data Type	Label	Required	Documentation
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	<input type="checkbox"/>	Mandatory field: The top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
dunningLetterDate	datetime	Dunning Letter Date	<input type="checkbox"/>	The Financial details tab > The dunning info section > Dunning letter date > The date of the last released dunning letter in w hich the document w as listed.
dunningLetterLevel	int32	Dunning Letter Level	<input type="checkbox"/>	The Financial details tab > The dunning info section > Dunning level > The dunning level of the document.
endDate	datetime	End Date	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	
externalReference	string	External Reference	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to w hich the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document w ith the On Hold status may be edited and cannot be released.
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.

Name	Data Type	Label	Required	Documentation
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>

vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

23.1.25 CustomerInvoicesLinesForCustomerByCustomerNumber: Visma.net Financials Customer Invoices Lines by Customer Number

Get a range of invoices for a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Invoices Lines by Customer Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoicesLinesForCustomerByCustomerNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition

Name	Data Type	Required	Default Value	Documentation
customerNumber	string	<input checked="" type="checkbox"/>		Identifies the customer for w hich to return data
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It w ill only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for w hen the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=<) OR after and including (=>) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint w ill be queued and executed in background. When the execution of the background operation is finished, the system w ill POST the response to the specified URL. The endpoint itself responds in this case w ith a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you w ant to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you w ant to see all attachments regarding this document.

Columns of Table Function

The columns of the table function CustomerInvoicesLinesForCustomerByCustomerNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class & The name of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account & The account number.
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
accountingCostRef	string		<input type="checkbox"/>	
amount_1	double		<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amount	double	Amount	<input type="checkbox"/>	Amount & The amount after the discount has been applied. The value of this read-only box is calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_1	double		<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable

Name	Data Type	Label	Required	Documentation
				if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance >; For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section >; Cash account >; The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount >; The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Mandatory field: The top part >; Cash discount date * >; The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier >; The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier >; The displayed name

Name	Data Type	Label	Required	Documentation
contractDocRef	string		<input type="checkbox"/>	
cost	double	Cost	<input type="checkbox"/>	Cost > The total cost of the line in default currency. The value will always be 0 for unreleased documents.
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	string	VAT Zone Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerVatZone_id	string	VAT Zone ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
deductableAmount	double		<input type="checkbox"/>	
deferralCode	string		<input type="checkbox"/>	The deferral code assigned to the stock item or non-stock item specified in this document line. Upon release of the document, the system generates a deferral schedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		<input type="checkbox"/>	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It shows the identifier of the deferral schedule associated with the original Cash sale document.
description	string	Description	<input type="checkbox"/>	Transaction descr. > Any brief comment relevant to the transaction. The alphanumeric string may contain up to 30 characters.

Name	Data Type	Label	Required	Documentation
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, w hich the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountAmount	double		<input type="checkbox"/>	Discount amount > The amount of the line-level discount that has been applied manually or automatically to this line. The system selects the Manual Discount check box and calculates the line amount after you have entered the discount amount manually and save your changes or added a new line.
discountAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.
discountCode	string	Discount Code	<input type="checkbox"/>	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent > The percent of the line-level discount that has been applied manually or automatically. The system selects the Manual Discount check box and calculates the discount amount after you have entered the percent manually and saved your changes or added a new line.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date w hen the customer ledger document w as created. By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	<input type="checkbox"/>	Mandatory field: The top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.

Name	Data Type	Label	Required	Documentation
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
dunningLetterDate	datetime	Dunning Letter Date	<input type="checkbox"/>	The Financial details tab > The dunning info section > Dunning letter date > The date of the last released dunning letter in which the document was listed.
dunningLetterLevel	int32	Dunning Letter Level	<input type="checkbox"/>	The Financial details tab > The dunning info section > Dunning level > The dunning level of the document.
endDate_1	datetime		<input type="checkbox"/>	
endDate	datetime	End Date	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	
externalLink	string		<input type="checkbox"/>	
externalReference	string	External Reference	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
inventoryNumber	string	Inventory Number	<input type="checkbox"/>	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.

Name	Data Type	Label	Required	Documentation
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* & The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier & The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier & The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address & A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode & The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText	string	Invoice Text	<input type="checkbox"/>	The top part & Invoice text & Any user-provided description of the customer ledger document.
isRotRutDeductible_1	boolean		<input type="checkbox"/>	The top part & Domestic services deductible document & A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
isRotRutDeductible	boolean		<input type="checkbox"/>	
itemType	string	Item Type	<input type="checkbox"/>	
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.
lineNumber	int32	Line Number	<input type="checkbox"/>	Line no. & A counter of lines in the overview of cash sales document overview .
lineType	string	Line Type	<input type="checkbox"/>	Transaction line type.Possible Values:-& Inventory = "GI";- & NonInventory = "GN";-& MiscCharge = "MI";-& Freight = "FR";-& Discount = "DS";-& Reallocation = "RA";
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.

Name	Data Type	Label	Required	Documentation
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
manualAmount	double	Manual Amount	<input type="checkbox"/>	Manual amount > a check box indicating that the amount has been entered manually.
manualAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Manual amount in your default currency. This field is applicable if the amount is given in another currency than your default.
manualDiscount	boolean		<input type="checkbox"/>	Manual discount > A check box that indicates (if selected) that the discount has been applied manually. If you clear the check box, the system clears entered discount percent, or discount amount, or selected discount code.
metadata_maxPageSize	int64		<input type="checkbox"/>

vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is

Name	Data Type	Label	Required	Documentation
				applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

23.1.26 CustomerInvoiceTaxDetailsByCustomerNumber: Visma.net Financials Customer Invoice Tax Details by Customer Number

Get a range of invoices for a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Invoice Tax Details by Customer Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceTaxDetailsByCustomerNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.

Name	Data Type	Required	Default Value	Documentation
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerNumber	string	<input checked="" type="checkbox"/>		Identifies the customer for which to return data
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=<) OR after and including (=>) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.

Name	Data Type	Required	Default Value	Documentation
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..

Columns of Table Function

The columns of the table function CustomerInvoiceTaxDetailsByCustomerNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
accountingCostRef	string		<input type="checkbox"/>	
amount	double	Amount	<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.

Name	Data Type	Label	Required	Documentation
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Mandatory field: The top part > Cash discount date * > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
contractDocRef	string		<input type="checkbox"/>	
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.

Name	Data Type	Label	Required	Documentation
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	string	VAT Zone Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerVatZone_id	string	VAT Zone ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, w hich the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	<input type="checkbox"/>	Mandatory field: The top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
dunningLetterDate	datetime	Dunning Letter Date	<input type="checkbox"/>	The Financial details tab > The dunning info section > Dunning letter date > The date of the last released dunning letter in w hich the document w as listed.
dunningLetterLevel	int32	Dunning Letter Level	<input type="checkbox"/>	The Financial details tab > The dunning info section > Dunning level > The dunning level of the document.
endDate	datetime	End Date	<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	
externalReference	string	External Reference	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier > The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText	string	Invoice Text	<input type="checkbox"/>	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible	boolean		<input type="checkbox"/>	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Sw edish markets)
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
note	string	Note	<input type="checkbox"/>	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
originatorDocRef	string		<input type="checkbox"/>	
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The top part > Orig invoice date > The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences.By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. > The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
paymentReference	string	Payment Reference	<input type="checkbox"/>	///The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
postPeriod	string	Post Period	<input type="checkbox"/>	The top part > Post period > The period to which the document should be posted. Format YYYYMM.

Name	Data Type	Label	Required	Documentation
project_description	string	Project Description	<input type="checkbox"/>	Click on the magnifier. > The description.
project_id	string	Project ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
recordId	int32	Record ID	<input type="checkbox"/>	The id as stored in the database. It can be used when we want to update a VAT record.
referenceNumber	string	Reference Number	<input type="checkbox"/>	The Top part > Ref. no. > The reference number of the customer ledger document in the system.
roundingDiff	double	Rounding Difference	<input type="checkbox"/>	The top part > Rounding diff. > The difference between the original amount and the rounded amount.
salesPerson_description	string	Sales Person Description	<input type="checkbox"/>	Click on the magnifier. > The description.
salesPerson_id	string	Sales Person ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
salesPersonDescr	string	Sales Person Name	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
salesPersonID	int32	Sales Person ID	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
sendToAutoInvoice	boolean	Send to Auto-invoice	<input type="checkbox"/>	The Attachment tab > Send the file to AutoInvoice > The selected files will be attached to the invoice.
startDate	datetime	Start Date	<input type="checkbox"/>	
status	string	Status	<input type="checkbox"/>	The top part > Status > The status of the document, which can be one of the following: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
subaccount_active	boolean		<input type="checkbox"/>	Active > The status of the identifier.
subaccount_description	string	Subaccount Description	<input type="checkbox"/>	Description > The description of the identifier.
subaccount_errorInfo	string	Sub Account Error Message	<input type="checkbox"/>	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	<input type="checkbox"/>	System generated information.
subaccount_metadata_maxPageSize	int64		<input type="checkbox"/>	
subaccount_metadata_totalCount	int64		<input type="checkbox"/>	
subaccount_subaccountId	int32	Sub Account ID	<input type="checkbox"/>	SubID > The identifier of the subaccount.
subaccount_subaccountNumber	string	Sub Account Number	<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.

Name	Data Type	Label	Required	Documentation
taxableAmount	double	Taxable Amount	<input type="checkbox"/>	Taxable amount > The taxable amount for the VAT, w hich is calculated at the document level.
taxId	string	Tax ID	<input type="checkbox"/>	Mandatory field: VAT ID* > The ID of the VAT applied to the document.
vatAmount	double	VAT Amount	<input type="checkbox"/>	VAT > The VAT amount for the specific VAT, w hich is calculated at the document level.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.

23.1.29 CustomerOrderForCustomerByCustomerCode: Visma.net Financials Customer Orders by Customer Code

Get a range of SO Orders of a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Orders by Customer Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOrderForCustomerByCustomerCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
customerCd	string	<input checked="" type="checkbox"/>		
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Filter on Order no. greater than value.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
orderBy	string	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. The OrderBy parameter has no effect on the result.
orderType	string	<input type="checkbox"/>		Filter by Order type.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
show Notes	boolean	<input type="checkbox"/>		Set to true to include notes.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.

Name	Data Type	Required	Default Value	Documentation
status	string	<input type="checkbox"/>		Select to filter on status on order. (Waarden: Open, Hold, CreditHold, Completed, Cancelled, BackOrder, Shipping, Invoiced, PendingApproval, Voided)

Columns of Table Function

The columns of the table function CustomerOrderForCustomerByCustomerCode are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cancelBy	datetime	Cancel by	<input type="checkbox"/>	Delivery settings tab > Shipping information section > Cancel by > The date when the order should be cancelled if the Back order allowed option has been selected in the Shipping rule field.
canceled	boolean	Canceled	<input type="checkbox"/>	The Delivery settings tab > The Shipping information section > Cancelled > A check box that indicates that the order has been cancelled on the date specified in Cancel by.
cashAccount	string	Cash Account	<input type="checkbox"/>	Payment settings tab > Cash account

23.1.30 CustomerOrderLineAttachmentsByCustomerCode: Visma.net Financials Customer Order Line Attachments by Customer Code

Get a range of SO Orders of a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Order Line Attachments by Customer Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariant SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOrderLineAttachmentsByCustomerCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
customerCd	string	<input checked="" type="checkbox"/>		
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Filter on Order no. greater than value.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
orderBy	string	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. The OrderBy parameter has no effect on the result.
orderType	string	<input type="checkbox"/>		Filter by Order type.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max

Name	Data Type	Required	Default Value	Documentation
				page size, request will be limited to max page size.
show Notes	boolean	<input type="checkbox"/>		Set to true to include notes.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		Select to filter on status on order. (Waarden: Open, Hold, CreditHold, Completed, Cancelled, BackOrder, Shipping, Invoiced, PendingApproval, Voided)

Columns of Table Function

The columns of the table function CustomerOrderLineAttachmentsByCustomerCode are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
alternateID	string	Alternate ID	<input type="checkbox"/>	Alternate ID > The alternate ID for the item, such as the item ID used by the customer.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cancelBy	datetime	Cancel by	<input type="checkbox"/>	Delivery settings tab > Shipping information section > Cancel by > The date when the order should be cancelled if the Back order allowed option has been selected in the Shipping rule field.
canceled	boolean	Canceled	<input type="checkbox"/>	The Delivery settings tab > The Shipping information section > Cancelled > A check box that indicates that the order has been cancelled on the date specified in Cancel by.
cashAccount	string	Cash Account	<input type="checkbox"/>	Payment settings tab > Cash account
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Financial settings tab > Financial information section > Cash discount date > The date when the cash discount is

Name	Data Type	Label	Required	Documentation
				available for the invoice based on the credit terms.
commissionable	boolean	Commissionable	<input type="checkbox"/>	VAT code > The VAT category of the goods mentioned in this line.
commissionableAmount	string		<input type="checkbox"/>	The Commissions tab > Commissionable amount> The amount used to calculate the commission.
commissionAmount	string		<input type="checkbox"/>	The Commissions tab > Commission amt. >The commission amount earned by the salesperson on this document.
commissionPercent	string		<input type="checkbox"/>	The Commissions tab > Commission (%) > The percentage of commission generally earned by the salesperson.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
completed	boolean	Completed	<input type="checkbox"/>	Completed > A check box that can be selected to indicate to the system that this line is completed.
contactId	int32	Contact ID	<input type="checkbox"/>	The top part > Contact > The contact person of the customer.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency > The currency of the document.
customer_internalId	int32	Customer Internal ID	<input type="checkbox"/>	
customer_name	string	Customer Name	<input type="checkbox"/>	The name of the particular destination of the selected type.
customer_number	string	Customer Number	<input type="checkbox"/>	The identifier of the particular destination of the selected type.
customerOrder	string	Customer Order	<input type="checkbox"/>	The top part > Customer order > The reference number of the original customer document that the sales order is based on.
customerRefNo	string	Customer Reference Number	<input type="checkbox"/>	The top part > External reference > The reference number of the sales order in a third-party application if Visma.net Financials is integrated with such an application and imports the sales orders from it.
customerVATZone_defaultTaxCategory_description	string	VAT Zone Default Tax Category Description	<input type="checkbox"/>	Name of item/description

23.1.31 CustomerOrderLinesByCustomerCode: Visma.net Financials Customer Order Lines by Customer Code

Get a range of SO Orders of a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Order Lines by Customer Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOrderLinesByCustomerCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
customerCd	string	<input checked="" type="checkbox"/>		
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Name	Data Type	Required	Default Value	Documentation
greaterThanValue	string	<input type="checkbox"/>		Filter on Order no. greater than value.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. Page number and pageSize does not work with NumberToRead and SkipRecords.
orderBy	string	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. The OrderBy parameter has no effect on the result.
orderType	string	<input type="checkbox"/>		Filter by Order type.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
showNotes	boolean	<input type="checkbox"/>		Set to true to include notes.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. Page number and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		Select to filter on status on order. (Waarden: Open, Hold, CreditHold, Completed, Cancelled, BackOrder, Shipping, Invoiced, PendingApproval, Voided)

Columns of Table Function

The columns of the table function CustomerOrderLinesByCustomerCode are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
alternateID	string	Alternate ID	<input type="checkbox"/>	Alternate ID > The alternate ID for the item, such as the item ID used by the customer.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cancelBy	datetime	Cancel by	<input type="checkbox"/>	Delivery settings tab > Shipping information section > Cancel by > The date w hen the order should be cancelled if the Back order allow ed option has been selected in the Shipping rule field.
canceled	boolean	Canceled	<input type="checkbox"/>	The Delivery settings tab > The Shipping information section > Canceled > A check box that indicates that the order has been cancelled on the date specified in Cancel by.
cashAccount	string	Cash Account	<input type="checkbox"/>	Payment settings tab > Cash account
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Financial settings tab > Financial information section > Cash discount date > The date w hen the cash discount is available for the invoice based on the credit terms.
commissionable	boolean	Commissionable	<input type="checkbox"/>	VAT code > The VAT category of the goods mentioned in this line.
commissionableAmount	string		<input type="checkbox"/>	The Commissions tab > Commissionable amount> The amount used to calculate the commission.
commissionAmount	string		<input type="checkbox"/>	The Commissions tab > Commission amt. >The commission amount earned by the salesperson on this document.
commissionPercent	string		<input type="checkbox"/>	The Commissions tab > Commission (%) > The percentage of commission generally earned by the salesperson.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
completed	boolean	Completed	<input type="checkbox"/>	Completed > A check box that can be selected to indicate to the

Name	Data Type	Label	Required	Documentation
				system that this line is completed.
contactId	int32	Contact ID	<input type="checkbox"/>	The top part > Contact >; The contact person of the customer.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency >; The currency of the document.
customer_internalId	int32	Customer Internal ID	<input type="checkbox"/>	
customer_name	string	Customer Name	<input type="checkbox"/>	The name of the particular destination of the selected type.
customer_number	string	Customer Number	<input type="checkbox"/>	The identifier of the particular destination of the selected type.
customerOrder	string	Customer Order	<input type="checkbox"/>	The top part > Customer order >; The reference number of the original customer document that the sales order is based on.
customerRefNo	string	Customer Reference Number	<input type="checkbox"/>	The top part > External reference >; The reference number of the sales order in a third-party application if Visma.net Financials is integrated with such an application and imports the sales orders from it.
customerVATZone_defaultTaxCategory_description	string	VAT Zone Default Tax Category Description	<input type="checkbox"/>	Name of item/description
customerVATZone_defaultTaxCategory_number	string	VAT Zone Default Tax Category Number	<input type="checkbox"/>	Number of item
customerVATZone_defaultVatCategory	string	VAT Zone Default VAT Category	<input type="checkbox"/>	Click the magnifier. The Default VAT category for the VAT zone of the supplier, which is specified in the AP303000 window .
customerVATZone_description	string	VAT Zone Description	<input type="checkbox"/>	Click the magnifier. The description for the VAT zone of the supplier, which is specified in the AP303000 window .
customerVATZone_errorInfo	string		<input type="checkbox"/>	
customerVATZone_id	string	VAT Zone ID	<input type="checkbox"/>	Click the magnifier. The identifier for the VAT zone of the supplier, which is specified in the AP303000 window .
customerVATZone_metadata_maxPageSize	int64		<input type="checkbox"/>	
customerVATZone_metadata_totalCount	int64		<input type="checkbox"/>	
date	datetime	Date	<input type="checkbox"/>	Mandatory field: The top part > Date* >; The date of the document.
description	string	Description	<input type="checkbox"/>	The top part > Description >; A brief description of the document.

Name	Data Type	Label	Required	Documentation
discountAmount	double		<input type="checkbox"/>	Document details tab >; Discount amount >; The amount of the line-level discount that has been applied manually or automatically to this line item (if the item is not a free item).
discountCode	string	Discount Code	<input type="checkbox"/>	Mandatory field: Document details tab >; Discount details tab >; Discount code* >; The code of the discount that has been applied to this line.
discountPercent	double	Discount Percent	<input type="checkbox"/>	Document details tab >; Discount percent >; The percent of the line-level discount that has been applied manually or automatically to this line item (if the item is not a free item).
discountTotal	double	Discount Total	<input type="checkbox"/>	
discountTotalInBaseCurrency	double		<input type="checkbox"/>	
discUnitPrice	double		<input type="checkbox"/>	Document details tab >; Disc. unit price >; The unit price, which has been recalculated after the application of discounts.
dueDate	datetime	Due Date	<input type="checkbox"/>	Financial settings tab >; Financial information section >; Due date >; The due date of the invoice according to the credit terms.
emailed	boolean	Emailed	<input type="checkbox"/>	A check box indicating if the document is emailed
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	
expirationDate	datetime	Expiration Date	<input type="checkbox"/>	Expiration date >; The expiration date for the item with the specified lot number.
externalLink	string		<input type="checkbox"/>	
extPrice	double		<input type="checkbox"/>	Document details tab >; Extended cost >; The extended price, which is the unit price multiplied by the quantity.
fobPoint_description	string		<input type="checkbox"/>	Click on the magnifier. >; The description.
fobPoint_id	string		<input type="checkbox"/>	Click on the magnifier. >; The identifier.
freeItem	boolean		<input type="checkbox"/>	A check box that indicates (if selected) that the stock item specified in the row is a free item. This information is collected from the system and not visible on the sales order line.
hold	boolean	Hold	<input type="checkbox"/>	The top part >; Hold >; A check box that you select if the document is on hold and should

Name	Data Type	Label	Required	Documentation
				not be processed further at this time.
insurance	boolean	Insurance	<input type="checkbox"/>	Delivery settings tab > Shipping information section > Insurance > A check box that you select to indicate that insurance is required for this order.
inventory_description	string	Inventory Description	<input type="checkbox"/>	Name of item/description
inventory_number	string	Inventory Number	<input type="checkbox"/>	Number of item
invoiceDate	datetime	Invoice Date	<input type="checkbox"/>	Financial settings tab > Financial information section > Invoice date> The date of the invoice generated for the order.
invoiceNbr_1	string		<input type="checkbox"/>	Financial settings tab > Financial information section > Invoice no.> The invoice number of the invoice generated for this order.
invoiceNbr	string	Invoice Number	<input type="checkbox"/>	The reference number of the invoice generated for this order. This number is collected from the system and not visible on the sales order line.
invoiceSeparately	boolean	Invoice Separately	<input type="checkbox"/>	Financial settings tab > Financial information section > Invoice separately > A check box that indicating that this document is to be invoiced separately (if that is required).
isRotRutDeductible_1	boolean		<input type="checkbox"/>	A check box indicating if the document is Rot/rut deductible (applicable for the Sw edish markets)
isRotRutDeductible	boolean		<input type="checkbox"/>	
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	Background information collected from the system.
lineDescription	string	Line Description	<input type="checkbox"/>	Document details tab > Line description > The description of the unit.
lineNbr	int32		<input type="checkbox"/>	Document details tab > Line no. > The line number of the document.
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
lotSerialNbr	string		<input type="checkbox"/>	Lot/serial no. > The lot or serial number of the item for returns
manualDiscount	boolean		<input type="checkbox"/>	Document details tab > Manual discount > A check box that indicates (if selected) that the

Name	Data Type	Label	Required	Documentation
				discount has been applied manually.
markForPO	boolean		<input type="checkbox"/>	Mark for purchase order > A check box that indicates (if selected) that the order line was marked for purchasing (if it has not been shipped completely).
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
note_1	string		<input type="checkbox"/>	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the order.
note	string	Note	<input type="checkbox"/>	Tables in tab > Icon Notes > Pop-up window for providing any user-defined text connected to the order.
openQty	double	Open Quantity	<input type="checkbox"/>	Document details tab > Open qty. > The quantity of the item to be shipped; that is, the total quantity minus the quantity shipped according to closed shipment documents.
operation	string	Operation	<input type="checkbox"/>	The operation to be performed in the workspace to fulfil the order. This information is collected from the system and not visible on the sales order line.
orderNo	string	Order Number	<input type="checkbox"/>	The top part > Order no.: > The reference number of the document.
orderTotal	double	Order Total	<input type="checkbox"/>	The top part > Order total > The total amount of the document, which is calculated as follows: Line Total + Misc.Charges + Freight + Premium Freight – Discount Total+ Tax Total
orderTotalInBaseCurrency	double		<input type="checkbox"/>	
orderType	string	Order Type	<input type="checkbox"/>	Mandatory field: The top part > Order type > The type of the document, which is one of the predefined order types or a custom order type created by using the (SO201000) window .
origOrderNbr	string		<input type="checkbox"/>	The top part > Order no. > The order number of the document.
origOrderType	string		<input type="checkbox"/>	Mandatory field: The top part > Order type* > The type of the document, which is one of the predefined order types or a custom order type created by using the window SO201000.

23.1.32 CustomerOrderShipmentsByCustomerCode: Visma.net Financials Customer Order Shipments by CustomerCode

Get a range of SO Orders of a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Order Shipments by CustomerCode

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariant SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOrderShipmentsByCustomerCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the

execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
customerCd	string	<input checked="" type="checkbox"/>		
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Filter on Order no. greater than value.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
orderBy	string	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. The OrderBy parameter has no effect on the result.
orderType	string	<input type="checkbox"/>		Filter by Order type.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata

Name	Data Type	Required	Default Value	Documentation
				information. If requested page size is greater than allowed max page size, request will be limited to max page size.
show Notes	boolean	<input type="checkbox"/>		Set to true to include notes.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		Select to filter on status on order. (Waarden: Open, Hold, CreditHold, Completed, Cancelled, BackOrder, Shipping, Invoiced, PendingApproval, Voided)

Columns of Table Function

The columns of the table function CustomerOrderShipmentsByCustomerCode are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cancelBy	datetime	Cancel by	<input type="checkbox"/>	Delivery settings tab > Shipping information section > Cancel by > The date when the order should be cancelled if the Back order allowed option has been selected in the Shipping rule field.
canceled	boolean	Canceled	<input type="checkbox"/>	The Delivery settings tab > The Shipping information section > Canceled > A check box that indicates that the order has been cancelled on the date specified in Cancel by.
cashAccount	string	Cash Account	<input type="checkbox"/>	Payment settings tab > Cash account
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Financial settings tab > Financial information section > Cash discount date > The date when the cash discount is available for the invoice based on the credit terms.
commissionableAmount	string		<input type="checkbox"/>	The Commissions tab > Commissionable amount> The amount used to calculate the commission.

Name	Data Type	Label	Required	Documentation
commissionAmount	string		<input type="checkbox"/>	The Commissions tab > Commission amt. > The commission amount earned by the salesperson on this document.
commissionPercent	string		<input type="checkbox"/>	The Commissions tab > Commission (%) > The percentage of commission generally earned by the salesperson.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contactId	int32	Contact ID	<input type="checkbox"/>	The top part > Contact > The contact person of the customer.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency > The currency of the document.
customer_internalId	int32	Customer Internal ID	<input type="checkbox"/>	
customer_name	string	Customer Name	<input type="checkbox"/>	The name of the particular destination of the selected type.
customer_number	string	Customer Number	<input type="checkbox"/>	The identifier of the particular destination of the selected type.
customerOrder	string	Customer Order	<input type="checkbox"/>	The top part > Customer order > The reference number of the original customer document that the sales order is based on.
customerRefNo	string	Customer Reference Number	<input type="checkbox"/>	The top part > External reference > The reference number of the sales order in a third-party application if Visma.net Financials is integrated with such an application and imports the sales orders from it.
customerVATZone_defaultTaxCategory_description	string	VAT Zone Default Tax Category Description	<input type="checkbox"/>	Name of item/description

email	string	<input type="checkbox"/>		Equals Email for customer.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandAccountInformation	boolean	<input type="checkbox"/>		
expandDirectDebit	boolean	<input type="checkbox"/>		Expand direct debit info
expandPaymentMethods	boolean	<input type="checkbox"/>		
greaterThanValue	string	<input type="checkbox"/>		This field does not work and has been deprecated. It will be removed in future versions.
lastModifiedDateTime	string	<input type="checkbox"/>		System retrieved information for last modified date and time.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for date, time and state/condition.
name	string	<input type="checkbox"/>		Equals Customer name.
numberToRead	int32	<input type="checkbox"/>		[This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.]Tells the service to return only {numberToRead} number of records.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
phone	string	<input type="checkbox"/>		Equals Phone 1 for customer.
skipRecords	int32	<input type="checkbox"/>		[This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.]Tells the service to return only records after the first {skipRecords} number of records.

Name	Data Type	Required	Default Value	Documentation
status	string	<input type="checkbox"/>		Drop down and select Status. (Waarden: Active, OnHold, CreditHold, Inactive, OneTime)
vatRegistrationId	string	<input type="checkbox"/>		Equals VAT registration ID from Delivery settings tab.

Columns of Table Function

The columns of the table function CustomerPaymentMethods are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
acceptAutoInvoices	boolean	Accept Auto-invoices	<input type="checkbox"/>	Invoicing settings & Print and email settings section & Send invoices to AutoInvoice & Select this check box if you are using AutoInvoice and want to send invoices directly to this service.
accountReference	string	Account Reference	<input type="checkbox"/>	General information tab & Main contact section & Account ref. & Your company's account number in the customer's system.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
corporateld	string	Corporate ID	<input type="checkbox"/>	Delivery settings tab & Default location settings section & Corporate ID & The customers company ID, associated with the location.
createdDateTime	datetime	Created	<input type="checkbox"/>	Information collected from the system. Not visible on the screen.
creditDaysPastDue	int32	Credit Days Past Due	<input type="checkbox"/>	General information tab & Credit verification rules section & Credit days past due & The maximum number of days by which the customer payment may exceed the invoice date.
creditLimit	double	Credit Limit	<input type="checkbox"/>	The General information tab & Credit verification rules section & Credit limit & The amount, if applicable, that serves as a credit limit for the customer.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. & The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
creditVerification	string	Credit Verification	<input type="checkbox"/>	The General information tab & Credit verification rules & Credit verification & The credit rule applied to this customer. The

Name	Data Type	Label	Required	Documentation
				following options are available: Days past due, Credit limit, Limit and days past due, disabled.
currencyId	string	Currency ID	<input type="checkbox"/>	The General information tab > Financial settings section > Currency ID > The currency used in operations with the customer, which you can select from the list of currencies defined in the system.
customerClass_description	string	Customer Class Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerClass_id	string	Customer Class ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
defaultPaymentMethodId	string		<input type="checkbox"/>	Invoicing settings tab > Default payment method section > The default payment method.
deliveryAddress_addressId	int32	Delivery Address ID	<input type="checkbox"/>	
deliveryAddress_addressLine1	string	Delivery Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.
deliveryAddress_addressLine2	string	Delivery Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
deliveryAddress_addressLine3	string	Delivery Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
deliveryAddress_city	string	Delivery Address City	<input type="checkbox"/>	City > The city.
deliveryAddress_country_errorInfo	string		<input type="checkbox"/>	
deliveryAddress_country_id	string	Delivery Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
deliveryAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
deliveryAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
deliveryAddress_country_name	string	Delivery Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
deliveryAddress_country_id	string	Delivery Address Country ID	<input type="checkbox"/>	Click the magnifier > The identifier
deliveryAddress_country_name	string	Delivery Address Country Name	<input type="checkbox"/>	Click the magnifier > The displayed name
deliveryAddress_postalCode	string	Delivery Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
deliveryContact_attention	string	Delivery Contact Attention	<input type="checkbox"/>	Attention > The attention line as it is used in your customer's/supplier's/company's business letters. The intention of this line is to direct the letter to the right person if the letter is not

Name	Data Type	Label	Required	Documentation
				addressed to any specific person.

23.1.34 CustomerPaymentMethodsByCustomerCode: Visma.net Financials Customer Payment Methods by Customer Code

Get a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Payment Methods by Customer Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerPaymentMethodsByCustomerCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
customerCd	string	<input checked="" type="checkbox"/>		Identifies the customer
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerPaymentMethodsByCustomerCode are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
acceptAutoInvoices	boolean	Accept Auto-invoices	<input type="checkbox"/>	Invoicing settings & Print and email settings section & Send invoices to AutoInvoice & Select this check box if you are using AutoInvoice and want to send invoices directly to this service.
accountReference	string	Account Reference	<input type="checkbox"/>	General information tab & Main contact section & Account ref. & Your company's account number in the customer's system.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.

23.1.35 Customers: Visma.net Financials Customers

Get a range of customers - ScreenId=AR303000

Catalog: VismaNet

Schema: Customer

Label: Customers

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function Customers. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
attributes	string	<input type="checkbox"/>		Attributes (additional information) connected to the entity. Examples: <code>{{base}}/customer?attributes={"AttributeID":"ValueID","AttributeID":"ValueID"}</code> <code>{{base}}/customer?attributes={"AttributeID":"ValueID1,ValueID2"}</code>
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
corporateld	string	<input type="checkbox"/>		Equals Corporate ID from Delivery settings tab.
createdDateTime	string	<input type="checkbox"/>		
createdDateTimeCondition	string	<input type="checkbox"/>		
email	string	<input type="checkbox"/>		Equals Email for customer.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandAccountInformation	boolean	<input type="checkbox"/>		

Name	Data Type	Required	Default Value	Documentation
expandDirectDebit	boolean	<input type="checkbox"/>		Expand direct debit info
expandPaymentMethods	boolean	<input type="checkbox"/>		
greaterThanValue	string	<input type="checkbox"/>		This field does not work and has been deprecated. It will be removed in future versions.
lastModifiedDateTime	string	<input type="checkbox"/>		System retrieved information for last modified date and time.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for date, time and state/condition.
name	string	<input type="checkbox"/>		Equals Customer name.
numberToRead	int32	<input type="checkbox"/>		[This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.]Tells the service to return only {numberToRead} number of records.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
phone	string	<input type="checkbox"/>		Equals Phone 1 for customer.
skipRecords	int32	<input type="checkbox"/>		[This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.]Tells the service to return only records after the first {skipRecords} number of records.
status	string	<input type="checkbox"/>		Drop down and select Status. (Waarden: Active, OnHold, CreditHold, Inactive, OneTime)
vatRegistrationId	string	<input type="checkbox"/>		Equals VAT registration ID from Delivery settings tab.

Columns of Table Function

The columns of the table function Customers are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
acceptAutoInvoices	boolean	Accept Auto-invoices	<input type="checkbox"/>	Invoicing settings > Print and email settings section > Send invoices to AutoInvoice > Select this check box if you are using AutoInvoice and want to send invoices directly to this service.
accountReference	string	Account Reference	<input type="checkbox"/>	General information tab > Main contact section > Account ref. > Your company's account number in the customer's system.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
corporateld	string	Corporate ID	<input type="checkbox"/>	Delivery settings tab > Default location settings section > Corporate ID > The customer's company ID, associated with the location.
createdDateTime	datetime	Created	<input type="checkbox"/>	Information collected from the system. Not visible on the screen.
creditDaysPastDue	int32	Credit Days Past Due	<input type="checkbox"/>	General information tab > Credit verification rules section > Credit days past due > The maximum number of days by which the customer payment may exceed the invoice date.
creditLimit	double	Credit Limit	<input type="checkbox"/>	The General information tab > Credit verification rules section > Credit limit > The amount, if applicable, that serves as a credit limit for the customer.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
creditVerification	string	Credit Verification	<input type="checkbox"/>	The General information tab > Credit verification rules > Credit verification > The credit rule applied to this customer. The following options are available: Days past due, Credit limit, Limit and days past due, disabled.
currencyId	string	Currency ID	<input type="checkbox"/>	The General information tab > Financial settings section > Currency ID > The currency used in operations with the customer, which you can select from the list of currencies defined in the system.
customerClass_description	string	Customer Class Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerClass_id	string	Customer Class ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.

Name	Data Type	Label	Required	Documentation
defaultPaymentMethodId	string		<input type="checkbox"/>	Invoicing settings tab > Default payment method section > The default payment method.
deliveryAddress_addressId	int32	Delivery Address ID	<input type="checkbox"/>	
deliveryAddress_addressLine1	string	Delivery Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.
deliveryAddress_addressLine2	string	Delivery Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
deliveryAddress_addressLine3	string	Delivery Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
deliveryAddress_city	string	Delivery Address City	<input type="checkbox"/>	City > The city.
deliveryAddress_country_errorInfo	string		<input type="checkbox"/>	
deliveryAddress_country_id	string	Delivery Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.

23.1.36 CustomerSalesOrderBasicAttachmentsByCustomerCode: Visma.net Financials Customer Sales Order Attachments by Customer Code

Get a range of SO Orders Basic of a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Sales Order Attachments by Customer Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerSalesOrderBasicAttachmentsByCustomerCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
customerCd	string	<input checked="" type="checkbox"/>		
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Filter on Order no. greater than value.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
orderBy	string	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. The OrderBy parameter has no effect on the result.
orderType	string	<input type="checkbox"/>		Filter by Order type.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
show Notes	boolean	<input type="checkbox"/>		Set to true to include notes.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.

Name	Data Type	Required	Default Value	Documentation
status	string	<input type="checkbox"/>		Select to filter on status on order. (Waarden: Open, Hold, CreditHold, Completed, Cancelled, BackOrder, Shipping, Invoiced, PendingApproval, Voided)

23.1.38 CustomerSalesOrderBasicLineAttachmentsByCustomerCode: Visma.net Financials Customer Sales Order Line Attachments by Customer Code

Get a range of SO Orders Basic of a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Sales Order Line Attachments by Customer Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerSalesOrderBasicLineAttachmentsByCustomerCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
customerCd	string	<input checked="" type="checkbox"/>		
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a

Name	Data Type	Required	Default Value	Documentation
				reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Filter on Order no. greater than value.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
orderBy	string	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. The OrderBy parameter has no effect on the result.
orderType	string	<input type="checkbox"/>		Filter by Order type.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteApplications. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<); after (>); before and including (=<); OR after and including (=>); to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.

Name	Data Type	Required	Default Value	Documentation
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.

Name	Data Type	Required	Default Value	Documentation
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerCreditNoteApplications are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountPaid	double	Amount Paid	<input type="checkbox"/>	
applicationDate	datetime	Application Date	<input type="checkbox"/>	
applicationPeriod	string	Application Period	<input type="checkbox"/>	
balance_1	double		<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balance	double	Balance	<input type="checkbox"/>	
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a

Name	Data Type	Label	Required	Documentation
				another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The top part > Cash discount date* > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
cashDiscountTaken	double		<input type="checkbox"/>	
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.

Name	Data Type	Label	Required	Documentation
customer_number	string	Customer Number	<input type="checkbox"/>	
customerCD	string		<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	string	VAT Zone Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerVatZone_id	string	VAT Zone ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, w hich the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
docType	string	Document Type	<input type="checkbox"/>	
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	<input type="checkbox"/>	The top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
dunningLetterDate	datetime	Dunning Letter Date	<input type="checkbox"/>	The Financial details tab > The Dunning information section > Dunning letter date > The date of the last released dunning letter in w hich the document w as listed.

Name	Data Type	Label	Required	Documentation
dunningLetterLevel	int32	Dunning Letter Level	<input type="checkbox"/>	The Financial details tab > The Dunning information section > Dunning level > The dunning level of the document.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	The top part > Currency > The middle field, click the down arrow > Exchange rate - To change the currency rate, click the arrow by the rate to invoke the Rate selection dialog box.
externalReference	string	External Reference	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold_1	boolean		<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
hold	boolean	Hold	<input type="checkbox"/>	
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier > The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address > A check box that indicates (if selected) that the invoice address is not

Name	Data Type	Label	Required	Documentation
				the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText_1	string		<input type="checkbox"/>	The top part > Invoice text > Any user-provided description of the customer ledger document.
invoiceText	string	Invoice Text	<input type="checkbox"/>	
isRotRutDeductible	boolean		<input type="checkbox"/>	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Sw edish markets)
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
note	string	Note	<input type="checkbox"/>	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The top part > Orig invoice date > The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences.By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. > The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
paymentRef	string	Payment Reference	<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
paymentReference	string	Payment Reference	<input type="checkbox"/>	///The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
pendingPPD	boolean		<input type="checkbox"/>	
postPeriod	string	Post Period	<input type="checkbox"/>	The top part > Post period > The period to which the document should be posted. Format YYYYMM.
ppdCrMemoRefNbr	string		<input type="checkbox"/>	
project_description	string	Project Description	<input type="checkbox"/>	Click on the magnifier. > The description.
project_id	string	Project ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
referenceNumber	string	Reference Number	<input type="checkbox"/>	The Top part > Ref. no. > The reference number of the customer ledger document in the system.
refNbr	string	Reference Number	<input type="checkbox"/>	
released	boolean	Released	<input type="checkbox"/>	
roundingDiff	double	Rounding Difference	<input type="checkbox"/>	The top part > Rounding diff. > The difference between the original amount and the rounded amount.
salesPerson_description	string	Sales Person Description	<input type="checkbox"/>	Click on the magnifier. > The description.
salesPerson_id	string	Sales Person ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
salesPersonDescr	string	Sales Person Name	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
salesPersonID	int32	Sales Person ID	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
sendToAutoInvoice	boolean	Send to Auto-invoice	<input type="checkbox"/>	The Attachment tab > Send the file to AutoInvoice > The selected files will be attached to the invoice.
status_1	string		<input type="checkbox"/>	The top part > Status > The status of the document, which can be one of the following: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
status	string	Status	<input type="checkbox"/>	
subaccount_active	boolean		<input type="checkbox"/>	Active > The status of the identifier.
subaccount_description	string	Subaccount Description	<input type="checkbox"/>	Description > The description of the identifier.

Name	Data Type	Label	Required	Documentation
subaccount_errorInfo	string	Sub Account Error Message	<input type="checkbox"/>	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	<input type="checkbox"/>	System generated information.
subaccount_metadata_maxPageSize	int64		<input type="checkbox"/>	
subaccount_metadata_totalCount	int64		<input type="checkbox"/>	
subaccount_subaccountId	int32	Sub Account ID	<input type="checkbox"/>	SubID > The identifier of the subaccount.
subaccount_subaccountNumber	string	Sub Account Number	<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The top part > VAT exempt total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax with the Include in VAT Exempt Total check box selected on the Taxes form. This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.
voided	boolean		<input type="checkbox"/>	

25.1.2 CustomerCreditNoteApplicationsByCreditNoteNumber: Visma.net Financials Customer Credit Note Applications by Credit Note Number

Get a specific Customer Credit NoteData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Applications by Credit Note Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteApplicationsByCreditNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
creditNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Customer Credit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerCreditNoteApplicationsByCreditNoteNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.

Name	Data Type	Label	Required	Documentation
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountPaid	double	Amount Paid	<input type="checkbox"/>	
applicationDate	datetime	Application Date	<input type="checkbox"/>	
applicationPeriod	string	Application Period	<input type="checkbox"/>	
balance_1	double		<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balance	double	Balance	<input type="checkbox"/>	
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The top part > Cash discount date* > The end date of the

Name	Data Type	Label	Required	Documentation
				cash discount period, w hich the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
cashDiscountTaken	double		<input type="checkbox"/>	
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.

				selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.
voided	boolean		<input type="checkbox"/>	

25.1.3 CustomerCreditNoteAttachments: Visma.net Financials Customer Credit Note Attachments

Get a range of Customer Credit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Attachments

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteAttachments. A value must be provided at all times for required

parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=amp;lt;) OR after and including (=amp;gt;) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Name	Data Type	Required	Default Value	Documentation
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in

Name	Data Type	Required	Default Value	Documentation
				the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerCreditNoteAttachments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount	double	Amount	<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part & Balance & For an open customer ledger

Name	Data Type	Label	Required	Documentation
				document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The top part > Cash discount date* > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document.

Name	Data Type	Label	Required	Documentation
				By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window .
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	string	VAT Zone Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerVatZone_id	string	VAT Zone ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, w hich the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	<input type="checkbox"/>	The top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
dunningLetterDate	datetime	Dunning Letter Date	<input type="checkbox"/>	The Financial details tab > The Dunning information section >

Name	Data Type	Label	Required	Documentation
				Dunning letter date & The date of the last released dunning letter in which the document was listed.
dunningLetterLevel	int32	Dunning Letter Level	<input type="checkbox"/>	The Financial details tab & The Dunning information section & Dunning level & The dunning level of the document.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	The top part & Currency & The middle field, click the down arrow & Exchange rate - To change the currency rate, click the arrow by the rate to invoke the Rate selection dialog box.
externalReference	string	External Reference	<input type="checkbox"/>	The top part & External reference & The external reference used in AutoInvoice.
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part & Hold & A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 & The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 & The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 & The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City & The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* & The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>

25.1.4 CustomerCreditNoteAttachmentsByCreditNoteNumber: Visma.net Financials Customer Credit Note Attachments by Credit Note Number

Get a specific Customer Credit NoteData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Attachments by Credit Note Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteAttachmentsByCreditNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
creditNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Customer Credit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerCreditNoteAttachmentsByCreditNoteNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item

Name	Data Type	Label	Required	Documentation
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.

vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

25.1.5 CustomerCreditNoteByNumber: Visma.net Financials Customer Credit Notes by Number

Get a specific Customer Credit NoteData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Notes by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
creditNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Customer Credit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the

Name	Data Type	Required	Default Value	Documentation
				specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerCreditNoteByNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount	double	Amount	<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part & Balance & For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. & The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. & The identifier.

Name	Data Type	Label	Required	Documentation
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The top part > Cash discount date* > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteLineAttachments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four

parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=amp;lt;) OR after and including (=amp;gt;) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this

Name	Data Type	Required	Default Value	Documentation
				document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.

Name	Data Type	Required	Default Value	Documentation
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerCreditNoteLineAttachments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class & The name of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account & The account number.
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount_1	double		<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.
amount	double	Amount	<input type="checkbox"/>	Amount & The amount after the discount has been applied. The value of this read-only box is calculated automatically by

Name	Data Type	Label	Required	Documentation
				deducting the discount amount from the extended price.
amountInCurrency_1	double		<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The top part > Cash discount date* > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.

Name	Data Type	Label	Required	Documentation
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
cost	double	Cost	<input type="checkbox"/>	Cost > The total cost of the line in default currency. The value will always be 0 for unreleased documents.
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	string	VAT Zone Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerVatZone_id	string	VAT Zone ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
deductableAmount	double		<input type="checkbox"/>	
deferralCode	string		<input type="checkbox"/>	The deferral code assigned to the stock item or non-stock item specified in this document line. Upon release of the document, the system generates a deferralschedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		<input type="checkbox"/>	Original deferral schedule > A read-only column filled in by the system in the Cash return

Name	Data Type	Label	Required	Documentation
				documents created by the reversing process. It shows the identifier of the deferral schedule associated with the original Cash sale document.
description	string	Description	<input type="checkbox"/>	Transaction descr. > Any brief comment relevant to the transaction. The alphanumeric string may contain up to 30 characters.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountAmount	double		<input type="checkbox"/>	Discount amount > The amount of the line-level discount that has been applied manually or automatically to this line. The system selects the Manual Discount check box and calculates the line amount after you have entered the discount amount manually and save your changes or added a new line.
discountAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.
discountCode	string	Discount Code	<input type="checkbox"/>	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent > The percent of the line-level discount that has been applied manually or automatically. The system selects the Manual Discount check box and calculates the discount amount after you have entered the percent manually and saved your changes or added a new line.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.

Name	Data Type	Label	Required	Documentation
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date when the customer ledger document was created. By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	<input type="checkbox"/>	The top part > Due date* > The date when payment for the document is due, in accordance with the credit terms.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
dunningLetterDate	datetime	Dunning Letter Date	<input type="checkbox"/>	The Financial details tab > The Dunning information section > Dunning letter date > The date of the last released dunning letter in which the document was listed.
dunningLetterLevel	int32	Dunning Letter Level	<input type="checkbox"/>	The Financial details tab > The Dunning information section > Dunning level > The dunning level of the document.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	The top part > Currency > The middle field, click the down arrow > Exchange rate - To change the currency rate, click the arrow by the rate to invoke the Rate selection dialog box.
externalLink	string		<input type="checkbox"/>	
externalReference	string	External Reference	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
inventoryNumber	string	Inventory Number	<input type="checkbox"/>	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.

Name	Data Type	Label	Required	Documentation
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier > The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText	string	Invoice Text	<input type="checkbox"/>	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible_1	boolean		<input type="checkbox"/>	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
isRotRutDeductible	boolean		<input type="checkbox"/>	
itemType	string	Item Type	<input type="checkbox"/>	
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.

Name	Data Type	Label	Required	Documentation
lineNumber	int32	Line Number	<input type="checkbox"/>	Line no. > A counter of lines in the overview of cash sales document overview .
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location* .
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
manualAmount	double	Manual Amount	<input type="checkbox"/>	Manual amount > a check box indicating that the amount has been entered manually.
manualAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Manual amount in your default currency. This field is applicable if the amount is given in another currency than your default.
manualDiscount	boolean		<input type="checkbox"/>	Manual discount > A check box that indicates (if selected) that the discount has been applied manually. If you clear the check box, the system clears entered discount percent, or discount amount, or selected discount code.
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
name	string	Name	<input type="checkbox"/>	The name of the attachment.
note_1	string		<input type="checkbox"/>	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
note	string	Note	<input type="checkbox"/>	Table > Icon Notes > Pop-up window for providing any user-defined text connected to the order.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The top part > Orig invoice date > The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences. By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. > The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
paymentReference	string	Payment Reference	<input type="checkbox"/>	//The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number

Name	Data Type	Label	Required	Documentation
				series assigned to cash sales in the Customer ledger preferences window ..
postPeriod	string	Post Period	<input type="checkbox"/>	The top part & Post period & The period to which the document should be posted. Format YYYYMM.
project_description	string	Project Description	<input type="checkbox"/>	Click on the magnifier. & The description.
project_id	string	Project ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
projectTask_description	string	Project Task Description	<input type="checkbox"/>	Click on the magnifier. & The description.
projectTask_id	string	Project Task ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
quantity	double	Quantity	<input type="checkbox"/>	Quantity & The quantity of items (goods or services) of a particular type sold to the customer.
referenceNumber	string	Reference Number	<input type="checkbox"/>	The Top part & Ref. no. & The reference number of the customer ledger document in the system.
revision	int32	Revision	<input type="checkbox"/>	The version of the attachment.
roundingDiff	double	Rounding Difference	<input type="checkbox"/>	The top part & Rounding diff. & The difference between the original amount and the rounded amount.
salesPerson_1_description	string		<input type="checkbox"/>	Click on the magnifier. & The description.
salesPerson_1_id	string		<input type="checkbox"/>	Click on the magnifier. & The identifier.
salesperson	string		<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use Seller instead
salesPersonDescr	string	Sales Person Name	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
salesPersonID	int32	Sales Person ID	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
seller_description	string	Seller Description	<input type="checkbox"/>	Click on the magnifier. & The description.
seller_id	string	Seller ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
sendToAutoInvoice	boolean	Send to Auto-invoice	<input type="checkbox"/>	The Attachment tab & Send the file to AutoInvoice & The selected files will be attached to the invoice.
soOrderNbr	string		<input type="checkbox"/>	
soOrderType	string		<input type="checkbox"/>	
soShipmentNbr	string		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
status	string	Status	<input type="checkbox"/>	The top part > Status > The status of the document, w hich can be one of the follow ing: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.

This total is calculated as the taxable amount for the tax with the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The top part > VAT taxable total > The document total that

Name	Data Type	Label	Required	Documentation
				is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

25.1.7 CustomerCreditNoteLineAttachmentsByCreditNoteNumber: Visma.net Financials Customer Credit Note Line Attachments by Credit Note Number

Get a specific Customer Credit NoteData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Line Attachments by Credit Note Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteLineAttachmentsByCreditNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
creditNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Customer Credit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerCreditNoteLineAttachmentsByCreditNoteNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class > The name of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account > The account number.
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount_1	double		<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.
amount	double	Amount	<input type="checkbox"/>	Amount > The amount after the discount has been applied. The value of this read-only box is calculated automatically by deducting the discount amount from the extended price.

Name	Data Type	Label	Required	Documentation
amountInCurrency_1	double		<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance >; For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The top part > Cash discount date* > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.

Name	Data Type	Label	Required	Documentation
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
cost	double	Cost	<input type="checkbox"/>	Cost > The total cost of the line in default currency. The value will always be 0 for unreleased documents.
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	string	VAT Zone Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerVatZone_id	string	VAT Zone ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
deductableAmount	double		<input type="checkbox"/>	
deferralCode	string		<input type="checkbox"/>	The deferral code assigned to the stock item or non-stock item specified in this document line. Upon release of the document, the system generates a deferral schedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		<input type="checkbox"/>	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It shows the identifier of the deferral schedule

Name	Data Type	Label	Required	Documentation
				associated with the original Cash sale document.
description	string	Description	<input type="checkbox"/>	Transaction descr. > Any brief comment relevant to the transaction. The alphanumeric string may contain up to 30 characters.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountAmount	double		<input type="checkbox"/>	Discount amount > The amount of the line-level discount that has been applied manually or automatically to this line. The system selects the Manual Discount check box and calculates the line amount after you have entered the discount amount manually and save your changes or added a new line.
discountAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.
discountCode	string	Discount Code	<input type="checkbox"/>	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent > The percent of the line-level discount that has been applied manually or automatically. The system selects the Manual Discount check box and calculates the discount amount after you have entered the percent manually and saved your changes or added a new line.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date when the customer ledger document was created. By default, for a new document, it is

Name	Data Type	Label	Required	Documentation
				the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	<input type="checkbox"/>	The top part > Due date* >; The date when payment for the document is due, in accordance with the credit terms.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type >; The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
dunningLetterDate	datetime	Dunning Letter Date	<input type="checkbox"/>	The Financial details tab >; The Dunning information section >; Dunning letter date >; The date of the last released dunning letter in which the document was listed.
dunningLetterLevel	int32	Dunning Letter Level	<input type="checkbox"/>	The Financial details tab >; The Dunning information section >; Dunning level >; The dunning level of the document.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	The top part >; Currency >; The middle field, click the down arrow >; Exchange rate - To change the currency rate, click the arrow by the rate to invoke the Rate selection dialog box.
externalLink	string		<input type="checkbox"/>	
externalReference	string	External Reference	<input type="checkbox"/>	The top part >; External reference >; The external reference used in AutoInvoice.
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part >; Hold >; A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
inventoryNumber	string	Inventory Number	<input type="checkbox"/>	Item ID >; The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 >; The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 >; The second line of the address.

Name	Data Type	Label	Required	Documentation
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier > The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode > The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText	string	Invoice Text	<input type="checkbox"/>	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible_1	boolean		<input type="checkbox"/>	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
isRotRutDeductible	boolean		<input type="checkbox"/>	
itemType	string	Item Type	<input type="checkbox"/>	
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.
lineNumber	int32	Line Number	<input type="checkbox"/>	Line no. > A counter of lines in the overview of cash sales

Name	Data Type	Label	Required	Documentation
				document overview .
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.

subaccount_subaccountld_1	int32		<input type="checkbox"/>	SubID > The identifier of the subaccount.
subaccount_subaccountld	int32	Sub Account ID	<input type="checkbox"/>	SubID > The identifier of the subaccount.
subaccount_subaccountNumber_1	string		<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
subaccount_subaccountNumber	string	Sub Account Number	<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
termEndDate	datetime	Term End Date	<input type="checkbox"/>	The date w hen the process of the deferred revenue recognition should finishfor the selected item; this date can be specified manually if the deferral codeassigned to the item is based on the Flexible by Periods, Prorate by days orFlexible by Days in Period recognition method.This column appears only if theDeferred Revenue Management feature is enabled on the Enable/Disable Features form.

Name	Data Type	Label	Required	Documentation
termStartDate	datetime	Term Start Date	<input type="checkbox"/>	The date when the process of deferred revenue recognition should start for theselected item; this date can be specified manually if the deferral code assignedto the item is based on the Flexible by Periods, Prorate by days or Flexible byDays in Period recognition method.This column appears only if the DeferredRevenue Management feature is enabled on the Enable/Disable Features screen.
typeOfWork_description	string		<input type="checkbox"/>	
typeOfWork_rutRotType	string		<input type="checkbox"/>	
typeOfWork_xmlTag	string		<input type="checkbox"/>	
unitPrice	double		<input type="checkbox"/>	Unit price > The unit price set for the item or service. If you want to update the unit priceautomatically to the current value(that is, the applicable sales or default price),you can use the Recalculate Prices and Discounts action.If you have modifiedthe unit price and saved the document, the value will not be updated by thesystem if you change the document date.
unitPriceInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Unit price in your default currency. This field is applicable if the amount is given in another currency than your default.
uom	string	Unit of Measure	<input type="checkbox"/>	UoM > The unit of measure (UoM) for the item.
vatCode_description	string	VAT Code Description	<input type="checkbox"/>	Click on the magnifier. > The description.
vatCode_id	string	VAT Code ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax with the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The top part > VAT taxable total > The document total that

Name	Data Type	Label	Required	Documentation
				is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

25.1.8 CustomerCreditNoteLines: Visma.net Financials Customer Credit Note Lines

Get a range of Customer Credit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=amp;lt;) OR after and including (=amp;gt;) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.

Name	Data Type	Required	Default Value	Documentation
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.

25.1.9 CustomerCreditNoteLinesByCreditNoteNumber: Visma.net Financials Customer Credit Note Lines by Credit Note Number

Get a specific Customer Credit NoteData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Lines by Credit Note Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteLinesByCreditNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
creditNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Customer Credit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint

Name	Data Type	Required	Default Value	Documentation
				itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerCreditNoteLinesByCreditNoteNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class & The name of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account & The account number.
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount_1	double		<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amount	double	Amount	<input type="checkbox"/>	Amount & The amount after the discount has been applied. The value of this read-only box is calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_1	double		<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable

Name	Data Type	Label	Required	Documentation
				if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance >; For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.

25.1.10 CustomerCreditNotePrintByCreditNoteNumber: Visma.net Financials Customer Credit Note Print by Credit Note Number

Get the print report of a Customer Credit NoteThe File is in Content of the message

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Print by Credit Note Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNotePrintByCreditNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
creditNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the customer credit note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a

Name	Data Type	Required	Default Value	Documentation
				reference to a state document for the background operation.

Columns of Table Function

The columns of the table function `CustomerCreditNotePrintByCreditNoteNumber` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
DUMMY	string(1)	Dummy	<input checked="" type="checkbox"/>	Default column added since the specification specifies that no data is returned.

25.1.11 CustomerCreditNotes: Visma.net Financials Customer Credit Notes

Get a range of Customer Credit Notes - `ScreenId=AR301000Request` page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size. Data for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Notes

The data in this table is partitioned per value of the `COMPANY_CODE` column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table `NativePlatformScalarRequests` to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function `CustomerCreditNotes`. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

25.1.12 CustomerCreditNoteTaxDetails: Visma.net Financials Customer Credit Note Tax Details

Get a range of Customer Credit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Tax Details

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteTaxDetails. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the

execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=amp;lt;) OR after and including (=amp;gt;) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Name	Data Type	Required	Default Value	Documentation

				another currency than your default.

25.1.13 CustomerCreditNoteTaxDetailsByCreditNoteNumber: Visma.net Financials Customer Credit Note Tax Details by Credit Note Number

Get a specific Customer Credit NoteData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Tax Details by Credit Note Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteTaxDetailsByCreditNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
creditNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Customer Credit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function `CustomerCreditNoteTaxDetailsByCreditNoteNumber` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount	double	Amount	<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part & Balance & For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. & The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. & The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab & The payment information section & Cash account & The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part & Cash discount & The cash discount amount that has been or will be taken on the document, which the system

Name	Data Type	Label	Required	Documentation
				calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The top part > Cash discount date* > The end date of the cash discount period, w hich the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.

roundingDiff	double	Rounding Difference	<input type="checkbox"/>	The top part > Rounding diff. > The difference between the original amount and the rounded amount.
salesPerson_description	string	Sales Person Description	<input type="checkbox"/>	Click on the magnifier. > The description.
salesPerson_id	string	Sales Person ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
salesPersonDescr	string	Sales Person Name	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
salesPersonID	int32	Sales Person ID	<input type="checkbox"/>	The field is deprecated for customer document endpoints, please use SalesPerson instead
sendToAutoInvoice	boolean	Send to Auto-invoice	<input type="checkbox"/>	The Attachment tab > Send the file to AutoInvoice > The selected files will be attached to the invoice.
status	string	Status	<input type="checkbox"/>	The top part > Status > The status of the document, which can be one of the following: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
subaccount_active	boolean		<input type="checkbox"/>	Active > The status of the identifier.
subaccount_description	string	Subaccount Description	<input type="checkbox"/>	Description > The description of the identifier.
subaccount_errorInfo	string	Sub Account Error Message	<input type="checkbox"/>	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	<input type="checkbox"/>	System generated information.
subaccount_metadata_maxPageSize	int64		<input type="checkbox"/>	
subaccount_metadata_totalCount	int64		<input type="checkbox"/>	
subaccount_subaccountId	int32	Sub Account ID	<input type="checkbox"/>	SubID > The identifier of the subaccount.
subaccount_subaccountNumber	string	Sub Account Number	<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
taxableAmount	double	Taxable Amount	<input type="checkbox"/>	Taxable amount > The taxable amount for the VAT, which is calculated at the document level.
taxId	string	Tax ID	<input type="checkbox"/>	Mandatory field: VAT ID* > The ID of the VAT applied to the document.
vatAmount	double	VAT Amount	<input type="checkbox"/>	VAT > The VAT amount for the specific VAT, which is calculated at the document level.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The top part > VAT exempt total > The document total that is exempt from VAT. This total is calculated as the taxable amount

Name	Data Type	Label	Required	Documentation
				for the tax with the Include in VAT Exempt Total check box selected on the Taxes form. This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatId_description	string		<input type="checkbox"/>	Name of item/description
vatId_number	string		<input type="checkbox"/>	Number of item
vatRate	double		<input type="checkbox"/>	VAT rate > The rate of the VAT.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

26 Schema: CustomerCreditWriteOff

26.1 Tables

26.1.1 CustomerCreditWriteOffByCreditWriteOffNumber

Get a specific Customer Credit WriteOffData for Customer Credit WriteOff

Catalog: VismaNet

Schema: CustomerCreditWriteOff

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditWriteOffByCreditWriteOffNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
creditWriteOffNumber	string	<input checked="" type="checkbox"/>		Identifies the Customer Credit WriteOff
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerCreditWriteOffByCreditWriteOffNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount	double	Amount	<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears

Name	Data Type	Label	Required	Documentation
				when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance >; For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.

invoiceText	string	Invoice Text	<input type="checkbox"/>	The top part > Invoice text > Any user-provided description of the customer ledger document.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
note	string	Note	<input type="checkbox"/>	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The top part > Orig invoice date > The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences. By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. > The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
postPeriod	string	Post Period	<input type="checkbox"/>	The top part > Post period > The period to which the document should be posted. Format YYYYMM.
project_description	string	Project Description	<input type="checkbox"/>	Click on the magnifier. > The description.
project_id	string	Project ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
referenceNumber	string	Reference Number	<input type="checkbox"/>	The Top part > Ref. no. > The reference number of the customer ledger document in the system.
roundingDiff	double	Rounding Difference	<input type="checkbox"/>	The top part > Rounding diff. > The difference between the original amount and the rounded amount.
status	string	Status	<input type="checkbox"/>	The top part > Status > The status of the document, which

Name	Data Type	Label	Required	Documentation
				can be one of the following: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
subaccount_active	boolean		<input type="checkbox"/>	Active & The status of the identifier.
subaccount_description	string	Subaccount Description	<input type="checkbox"/>	Description & The description of the identifier.
subaccount_errorInfo	string	Sub Account Error Message	<input type="checkbox"/>	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	<input type="checkbox"/>	System generated information.
subaccount_metadata_maxPageSize	int64		<input type="checkbox"/>	
subaccount_metadata_totalCount	int64		<input type="checkbox"/>	
subaccount_subaccountId	int32	Sub Account ID	<input type="checkbox"/>	SubID & The identifier of the subaccount.
subaccount_subaccountNumber	string	Sub Account Number	<input type="checkbox"/>	Mandatory field: Subaccount* & The subaccount number. Format 9-XX.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part & VAT total & The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

27 Schema: CustomerDebitNote

27.1 Tables

27.1.1 CustomerDebitNoteApplications: Visma.net Financials Customer Debit Note Applications

Get a range of Customer Debit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Debit Note

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Applications

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function `CustomerDebitNoteApplications`. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
<code>closedFinancialPeriod</code>	string	<input type="checkbox"/>		The date of the closing of the financial period.
<code>COMPANY_CODE</code>	string	<input type="checkbox"/>		Partition to retrieve data from.
<code>createdDateTime</code>	string	<input type="checkbox"/>		Creation date and time.
<code>createdDateTimeCondition</code>	string	<input type="checkbox"/>		System-retrieved information for state/condition
<code>customerRefNumber</code>	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
<code>documentDueDate</code>	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
<code>documentType</code>	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
<code>dunningLetterDateTime</code>	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
<code>dunningLetterDateTimeCondition</code>	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=<) OR after and including (=>) to filter on time frame.
<code>dunningLevel</code>	int32	<input type="checkbox"/>		The dunning level of the document.
<code>erp-api-background</code>	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system

Name	Data Type	Required	Default Value	Documentation
				will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.

Name	Data Type	Required	Default Value	Documentation
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerDebitNoteApplications are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default

Name	Data Type	Label	Required	Documentation
				currency. This field is applicable if the amount is given in a another currency than your default.
amountPaid	double	Amount Paid	<input type="checkbox"/>	
applicationDate	datetime	Application Date	<input type="checkbox"/>	
applicationPeriod	string	Application Period	<input type="checkbox"/>	
balance_1	double		<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balance	double	Balance	<input type="checkbox"/>	
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Mandatory field: The Top part > Cash discount date* > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
cashDiscountTaken	double		<input type="checkbox"/>	
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.

Name	Data Type	Label	Required	Documentation
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window .

voided	boolean		<input type="checkbox"/>	

27.1.2 CustomerDebitNoteApplicationsByDebitNoteNumber: Visma.net Financials Customer Debit Note Applications by Debit Note Number

Get a specific Customer Debit NoteData for Customer Debit Note

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Applications by Debit Note Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteApplicationsByDebitNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
debitNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Customer Debit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint

Name	Data Type	Required	Default Value	Documentation
				itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerDebitNoteApplicationsByDebitNoteNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount	double	Amount	<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountPaid	double	Amount Paid	<input type="checkbox"/>	
applicationDate	datetime	Application Date	<input type="checkbox"/>	
applicationPeriod	string	Application Period	<input type="checkbox"/>	
balance_1	double		<input type="checkbox"/>	The top part & Balance & For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balance	double	Balance	<input type="checkbox"/>	
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.

Name	Data Type	Label	Required	Documentation
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.

27.1.3 CustomerDebitNoteAttachments: Visma.net Financials Customer Debit Note Attachments

Get a range of Customer Debit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Debit Note

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Attachments

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteAttachments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including

Name	Data Type	Required	Default Value	Documentation
				(=<) OR after and including (= >) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.

Name	Data Type	Required	Default Value	Documentation
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerDebitNoteAttachments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.

vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

27.1.4 CustomerDebitNoteAttachmentsByNumber: Visma.net Financials Customer Debit Note Attachments by Number

Get a specific Customer Debit NoteData for Customer Debit Note

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Attachments by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteAttachmentsByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
debitNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Customer Debit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerDebitNoteAttachmentsByNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Mandatory field: The Top part > Cash discount date* > The end date of the cash discount period, which the

Name	Data Type	Label	Required	Documentation
				system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.

27.1.5 CustomerDebitNoteByNumber: Visma.net Financials Customer Debit Note by Number

Get a specific Customer Debit NoteData for Customer Debit Note

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
debitNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Customer Debit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background

Name	Data Type	Required	Default Value	Documentation
				operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerDebitNoteByNumber are shown below. Each column has an SQL data type.

27.1.6 CustomerDebitNoteLineAttachments: Visma.net Financials Customer Debit Note Line Attachments

Get a range of Customer Debit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Debit Note

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Line Attachments

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteLineAttachments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four

parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<), after (>), before and including (=amp;lt;) OR after and including (=amp;gt;) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this

skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pagesize for pagination purposes. Page number and pagesize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerDebitNoteLineAttachments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class & The name of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account & The account number.
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount_1	double		<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.
amount	double	Amount	<input type="checkbox"/>	Amount & The amount after the discount has been applied. The value of this read-only box is calculated automatically by

Name	Data Type	Label	Required	Documentation
				deducting the discount amount from the extended price.
amountInCurrency_1	double		<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Mandatory field: The Top part > Cash discount date* > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.

Name	Data Type	Label	Required	Documentation
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
cost	double	Cost	<input type="checkbox"/>	Cost > The total cost of the line in default currency. The value will always be 0 for unreleased documents.
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	string	VAT Zone Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerVatZone_id	string	VAT Zone ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
deductableAmount	double		<input type="checkbox"/>	
deferralCode	string		<input type="checkbox"/>	The deferral code assigned to the stock item or non-stock item specified in this document line. Upon release of the document, the system generates a deferralschedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		<input type="checkbox"/>	Original deferral schedule > A read-only column filled in by the system in the Cash return

Name	Data Type	Label	Required	Documentation
				documents created by the reversing process. It shows the identifier of the deferral schedule associated with the original Cash sale document.
description	string	Description	<input type="checkbox"/>	Transaction descr. > Any brief comment relevant to the transaction. The alphanumeric string may contain up to 30 characters.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountAmount	double		<input type="checkbox"/>	Discount amount > The amount of the line-level discount that has been applied manually or automatically to this line. The system selects the Manual Discount check box and calculates the line amount after you have entered the discount amount manually and save your changes or added a new line.
discountAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.
discountCode	string	Discount Code	<input type="checkbox"/>	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent > The percent of the line-level discount that has been applied manually or automatically. The system selects the Manual Discount check box and calculates the discount amount after you have entered the percent manually and saved your changes or added a new line.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part > Discount total > The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in another currency than your default.

Name	Data Type	Label	Required	Documentation
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part > Date* > The date when the customer ledger document was created. By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	<input type="checkbox"/>	Mandatory field: The Top part > Due date* > The date when payment for the document is due, in accordance with the credit terms.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
dunningLetterDate	datetime	Dunning Letter Date	<input type="checkbox"/>	The Financial details tab > The Dunning information section > Dunning letter date > The date of the last released dunning letter in which the document was listed.
dunningLetterLevel	int32	Dunning Letter Level	<input type="checkbox"/>	The Financial details tab > The Dunning information section > Dunning level > The dunning level of the document.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	The Top part > Currency > The middle field, click the down arrow > Exchange rate.

27.1.7 CustomerDebitNoteLineAttachmentsByNumber: Visma.net Financials Customer Debit Note Line Attachments by Number

Get a specific Customer Debit NoteData for Customer Debit Note

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Line Attachments by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteLineAttachmentsByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
debitNoteNumber	string	<input checked="" type="checkbox"/>		Identifies the Customer Debit Note
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system

Name	Data Type	Required	Default Value	Documentation
				will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function CustomerDebitNoteLineAttachmentsByNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class > The name of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account > The account number.
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount_1	double		<input type="checkbox"/>	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window. If the check box is cleared, then the value appears when the document status is Open.
amount	double	Amount	<input type="checkbox"/>	Amount > The amount after the discount has been applied. The value of this read-only box is calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_1	double		<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default

Name	Data Type	Label	Required	Documentation
				currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part > Balance > For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The top part > Cash discount > The cash discount amount that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Mandatory field: The Top part > Cash discount date* > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_id	int32	Contact ID	<input type="checkbox"/>	Click the magnifier > The identifier

Name	Data Type	Label	Required	Documentation
contact_name	string	Contact Name	<input type="checkbox"/>	Click the magnifier > The displayed name
cost	double	Cost	<input type="checkbox"/>	Cost > The total cost of the line in default currency. The value will always be 0 for unreleased documents.
createdDateTime	datetime	Created	<input type="checkbox"/>	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency of the document. By default, it is the customer's default currency, but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerProject	string		<input type="checkbox"/>	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	string	Custom Reference Number	<input type="checkbox"/>	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	string	VAT Zone Description	<input type="checkbox"/>	Click on the magnifier. > The description.
customerVatZone_id	string	VAT Zone ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
deductableAmount	double		<input type="checkbox"/>	
deferralCode	string		<input type="checkbox"/>	The deferral code assigned to the stock item or non-stock item specified in this document line. Upon release of the document, the system generates a deferral schedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		<input type="checkbox"/>	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It shows the identifier of the deferral schedule associated with the original Cash sale document.
description	string	Description	<input type="checkbox"/>	Transaction descr. > Any brief comment relevant to the transaction. The alphanumeric

Name	Data Type	Label	Required	Documentation
				string may contain up to 30 characters.
detailTotal	double	Detail Total	<input type="checkbox"/>	The top part > Detail total >; The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountAmount	double		<input type="checkbox"/>	Discount amount >; The amount of the line-level discount that has been applied manually or automatically to this line. The system selects the Manual Discount check box and calculates the line amount after you have entered the discount amount manually and save your changes or added a new line.
discountAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.
discountCode	string	Discount Code	<input type="checkbox"/>	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent >; The percent of the line-level discount that has been applied manually or automatically. The system selects the Manual Discount check box and calculates the discount amount after you have entered the percent manually and saved your changes or added a new line.
discountTotal	double	Discount Total	<input type="checkbox"/>	The top part >; Discount total >; The document discount total.
discountTotalInCurrency	double		<input type="checkbox"/>	The top part >; Discount total >; The document discount total in your default currency. This field is applicable if the amount is given in another currency than your default.
documentDate	datetime	Document Date	<input type="checkbox"/>	The top part >; Date* >; The date when the customer ledger document was created. By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	<input type="checkbox"/>	Mandatory field: The Top part >; Due date* >; The date when payment for the document

Name	Data Type	Label	Required	Documentation
				is due, in accordance with the credit terms.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	boolean	Don't Email	<input type="checkbox"/>	
dontPrint	boolean	Don't Print	<input type="checkbox"/>	
dunningLetterDate	datetime	Dunning Letter Date	<input type="checkbox"/>	The Financial details tab > The Dunning information section > Dunning letter date > The date of the last released dunning letter in which the document was listed.
dunningLetterLevel	int32	Dunning Letter Level	<input type="checkbox"/>	The Financial details tab > The Dunning information section > Dunning level > The dunning level of the document.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	The Top part > Currency > The middle field, click the down arrow > Exchange rate.
externalLink	string		<input type="checkbox"/>	
externalReference	string	External Reference	<input type="checkbox"/>	The Top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
inventoryNumber	string	Inventory Number	<input type="checkbox"/>	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	<input type="checkbox"/>	
invoiceAddress_addressLine1	string	Invoice Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	string	Invoice Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
invoiceAddress_addressLine3	string	Invoice Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
invoiceAddress_city	string	Invoice Address City	<input type="checkbox"/>	City > The city.
invoiceAddress_country_errorInfo	string		<input type="checkbox"/>	
invoiceAddress_country_id	string	Invoice Address Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID

Name	Data Type	Label	Required	Documentation
				according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
invoiceAddress_country_metadata_totalCount	int64		<input type="checkbox"/>	
invoiceAddress_country_name	string	Invoice Address Country Name	<input type="checkbox"/>	Mandatory field: Country name* & The complete name of the country.
invoiceAddress_county_id	string	Invoice Address County ID	<input type="checkbox"/>	Click the magnifier & The identifier
invoiceAddress_county_name	string	Invoice Address County Name	<input type="checkbox"/>	Click the magnifier & The displayed name
invoiceAddress_overrideAddress	boolean		<input type="checkbox"/>	Override address & A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	string	Invoice Address Postal Code	<input type="checkbox"/>	Postcode & The postcode.
invoiceContact_attention	string	Invoice Contact Attention	<input type="checkbox"/>	
invoiceContact_businessName	string		<input type="checkbox"/>	
invoiceContact_contactId	int32	Invoice Contact ID	<input type="checkbox"/>	
invoiceContact_email	string	Invoice Contact Email Address	<input type="checkbox"/>	
invoiceContact_overrideContact	boolean		<input type="checkbox"/>	
invoiceContact_phone1	string	Invoice Contact Phone 1	<input type="checkbox"/>	
invoiceText	string	Invoice Text	<input type="checkbox"/>	The top part & Invoice text & Any user-provided description of the customer ledger document.
isRotRutDeductible_1	boolean		<input type="checkbox"/>	The top part & Domestic services deductible document & A check box indicating if the document is Rot/rut deductible (applicable for the Sw edish markets)
isRotRutDeductible	boolean		<input type="checkbox"/>	Domestic services deductible document & A check box indicating if the document is Rot/rut deductible (applicable for the Sw edish markets)
itemType	string	Item Type	<input type="checkbox"/>	
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated field for last modification date/time of document.
lineNumber	int32	Line Number	<input type="checkbox"/>	Line no. & A counter of lines in the overview of cash sales document overview .
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.

Name	Data Type	Label	Required	Documentation
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
manualAmount	double	Manual Amount	<input type="checkbox"/>	Manual amount > a check box indicating that the amount has been entered manually.
manualAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Manual amount in your default currency. This field is applicable if the amount is given in another currency than your default.
manualDiscount	boolean		<input type="checkbox"/>	Manual discount > A check box that indicates (if selected) that the discount has been applied manually. If you clear the check box, the system clears entered discount percent, or discount amount, or selected discount code.
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
name	string	Name	<input type="checkbox"/>	The name of the attachment.
note_1	string		<input type="checkbox"/>	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
note	string	Note	<input type="checkbox"/>	Table > Icon Notes > Pop-up window for providing any user-defined text connected to the order.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The top part > Orig invoice date > The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences. By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. > The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
paymentReference	string	Payment Reference	<input type="checkbox"/>	//The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
postPeriod	string	Post Period	<input type="checkbox"/>	The top part > Post period > The period to which the

Name	Data Type	Label	Required	Documentation
				document should be posted. Format YYYYMM.
project_description	string	Project Description	<input type="checkbox"/>	Click on the magnifier. > The description.
project_id	string	Project ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
quantity	double	Quantity	<input type="checkbox"/>	Quantity > The quantity of items (goods or services) of a particular type sold to the customer.
referenceNumber	string	Reference Number	<input type="checkbox"/>	The Top part > Ref. no. > The reference number of the customer ledger document in the system.
revision	int32	Revision	<input type="checkbox"/>	The version of the attachment.
roundingDiff	double	Rounding Difference	<input type="checkbox"/>	The Top part > Rounding diff. > The difference between the original amount and the rounded amount.
salesPerson_1_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
salesPerson_1_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.

subaccount_subaccountId	int32	Sub Account ID	<input type="checkbox"/>	SubID > The identifier of the subaccount.
subaccount_subaccountNumber_1	string		<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
subaccount_subaccountNumber	string	Sub Account Number	<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
termEndDate	datetime	Term End Date	<input type="checkbox"/>	The date when the process of the deferred revenue recognition should finish for the selected item; this date can be specified manually if the deferral code assigned to the item is based on the Flexible by Periods, Prorate by days or Flexible by Days in Period recognition method. This column appears only if the Deferred Revenue Management feature is enabled on the Enable/Disable Features form.
termStartDate	datetime	Term Start Date	<input type="checkbox"/>	The date when the process of deferred revenue recognition should start for theselected item; this date can be specified manually if the deferral code assigned to the item is based on the Flexible by Periods, Prorate by days or Flexible by Days in Period recognition method. This column appears only if the Deferred Revenue Management feature is enabled on the Enable/Disable Features screen.
typeOfWork_description	string		<input type="checkbox"/>	
typeOfWork_rutRotType	string		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
typeOfWork_xmlTag	string		<input type="checkbox"/>	
unitPrice	double		<input type="checkbox"/>	Unit price > The unit price set for the item or service. If you want to update the unit price automatically to the current value (that is, the applicable sales or default price), you can use the Recalculate Prices and Discounts action. If you have modified the unit price and saved the document, the value will not be updated by the system if you change the document date.
unitPriceInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Unit price in your default currency. This field is applicable if the amount is given in another currency than your default.
uom	string	Unit of Measure	<input type="checkbox"/>	UoM > The unit of measure (UoM) for the item.
vatCode_description	string	VAT Code Description	<input type="checkbox"/>	Click on the magnifier. > The description.
vatCode_id	string	VAT Code ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The top part > VAT exempt total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax with the Include in VAT Exempt Total check box selected on the Taxes form. This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a

Name	Data Type	Label	Required	Documentation
				another currency than your default.

27.1.8 CustomerDebitNoteLines: Visma.net Financials Customer Debit Note Lines

Get a range of Customer Debit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Debit Note

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod	string	<input type="checkbox"/>		The date of the closing of the financial period.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
customerRefNumber	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
documentDueDate	datetime	<input type="checkbox"/>		The date when payment for the document is due, in accordance with the credit terms.

Name	Data Type	Required	Default Value	Documentation
documentType	string	<input type="checkbox"/>		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Waarden: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime	string	<input type="checkbox"/>		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition	string	<input type="checkbox"/>		Set time/date as before (<); after (>); before and including (=<); OR after and including (=>) to filter on time frame.
dunningLevel	int32	<input type="checkbox"/>		The dunning level of the document.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApplications	boolean	<input type="checkbox"/>		True if you want to see all dunning information regarding this document.
expandAttachments	boolean	<input type="checkbox"/>		True if you want to see all attachments regarding this document.
expandDunningInformation	boolean	<input type="checkbox"/>		
expandInvoiceAddress	boolean	<input type="checkbox"/>		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails	boolean	<input type="checkbox"/>		True if you want to see all VAT details regarding this document.
externalReference	string	<input type="checkbox"/>		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	string	<input type="checkbox"/>		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format:

Name	Data Type	Required	Default Value	Documentation
				YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
paymentReference	string	<input type="checkbox"/>		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project	string	<input type="checkbox"/>		The project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. Use the dropdown to select status. (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerDebitNoteLines are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description_1	string		<input type="checkbox"/>	Name of item/description
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1_1	string		<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2_1	string		<input type="checkbox"/>	Account class & The name of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number_1	string		<input type="checkbox"/>	Number of item
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type_1	string		<input type="checkbox"/>	Account & The account number.
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount_1	double		<input type="checkbox"/>	The top part & Amount & The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 window .If the check box is cleared, then the value appears when the document status is Open.
amount	double	Amount	<input type="checkbox"/>	Amount & The amount after the discount has been applied. The value of this read-only box is calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_1	double		<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
amountInCurrency	double	Amount in Currency	<input type="checkbox"/>	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	<input type="checkbox"/>	The top part & Balance & For an open customer ledger document, the balance after any cash discount was taken. For a document used in the application process, this is the balance after the payments were applied.
