85.1.2 BasicSalesOrderAttachmentsByOrderNumber: Visma.net Financials Basic Sales Order Attachments by Order Number

Get a specific SO OrderData for a single Sales Order Basic

Catalog: VismaNet

Schema: SalesOrderBasic

Label: Basic Sales Order Attachments by Order Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function BasicSalesOrderAttachmentsByOrderNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
orderNbr	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Number

Columns of Table Function

85.1.5 BasicSalesOrderLineAttachmentsByOrderNumber: Visma.net Financials Basic Sales Order Line Attachments by Order Number

Get a specific SO OrderData for a single Sales Order Basic

Catalog: VismaNet

Schema: SalesOrderBasic

Label: Basic Sales Order Line Attachments by Order Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function BasicSalesOrderLineAttachmentsByOrderNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the

execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
orderNbr	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Number

85.1.8 BasicSalesOrderLinesByOrderNumber: Visma.net Financials Basic Sales Order Lines by Order Number

Get a specific SO OrderData for a single Sales Order Basic

Catalog: VismaNet

Schema: SalesOrderBasic

Label: Basic Sales Order Lines by Order Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function BasicSalesOrderLinesByOrderNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the

default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
orderNbr	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Number

85.1.11 BasicSalesOrdersByOrderNumber: Visma.net Financials Basic Sales Orders by Order Number

Get a specific SO OrderData for a single Sales Order Basic

Catalog: VismaNet

Schema: SalesOrderBasic

Label: Basic Sales Orders by Order Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function BasicSalesOrdersByOrderNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

Catalog: VismaNet

Schema: SalesPersonV2

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesPersonV2Salespersons. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
commissionPct	double	<input type="checkbox"/>

91.1.4 ShipmentDetailLines: Visma.net Financials Shipment Detail Lines

Get a range of SO Shipments - ScreenId=SO302000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page size

Catalog: VismaNet

Schema: Shipment

Label: Shipment Detail Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ShipmentDetailLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

91.1.6 ShipmentOrderLines: Visma.net Financials Shipment Order Lines

Get a range of SO Shipments - ScreenId=SO302000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size

Catalog: VismaNet

Schema: Shipment

Label: Shipment Order Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function `ShipmentOrderLines`. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

91.1.9 ShipmentPackageLinesByNumber: Visma.net Financials Shipment Package Lines by Number

Get a specific Shipment

Catalog: VismaNet

Schema: Shipment

Label: Shipment Package Lines by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function `ShipmentPackageLinesByNumber`. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

92 Schema: Stocktake

92.1 Tables

92.1.1 StockTakeByReferenceNumber: Visma.net Financials Stock Take by Reference Number

Get a specific - Method is deprecated and will be removed from 1'st of December 2021. Start using V2 for this method.

Catalog: VismaNet

Schema: Stocktake

Label: Stock Take by Reference Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function StockTakeByReferenceNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.

93.1.1 StockTakeLinesV2: Visma.net Financials Stock Take Lines

Get a range of stocktakes - ScreenId=IN305000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.

Catalog: VismaNet

Schema: StocktakeV2

Label: Stock Take Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function StockTakeLinesV2. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

96.1.2 SupplierAttributesByCode: Visma.net Financials Supplier Attributes by Code

Get a specific supplier

Catalog: VismaNet

Schema: Supplier

Label: Supplier Attributes by Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierAttributesByCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
supplierCd	string	<input checked="" type="checkbox"/>		Identifies the supplier

96.1.6 SupplierClassAttributeDetails: Visma.net Financials Supplier Class Attribute Details

Get supplier classes

Catalog: VismaNet

Schema: Supplier

Label: Supplier Class Attribute Details

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierClassAttributeDetails. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function `SupplierClassAttributeDetails` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
<code>attributeld</code>	string	Attribute ID	<input type="checkbox"/>	The Attributes tab > Attribute ID > The identifier of the attribute.
<code>attributeType</code>	string		<input type="checkbox"/>	
<code>COMPANY_CODE</code>	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
<code>COMPANY_NAME</code>	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
<code>defaultValue</code>	string		<input type="checkbox"/>	The Attributes tab > Default value > The default value of the attribute.
<code>description_1</code>	string		<input type="checkbox"/>	The Attributes tab > Description > A read-only column that displays the detailed description of the attribute.
<code>description_2</code>	string		<input type="checkbox"/>	Click on the magnifier. > The description.
<code>description</code>	string	Description	<input type="checkbox"/>	Click on the magnifier. > The description.
<code>id_1</code>	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
<code>id</code>	string	ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
<code>required</code>	boolean	Required	<input type="checkbox"/>	The Attributes tab > Required > This check box indicates (if selected) that the attribute value is required for items of the class.
<code>sortOrder</code>	int32		<input type="checkbox"/>	The Attributes tab > Sort order > A number that represents the order of the attribute in the list of class attributes. The lower the number, the higher the attribute will be in the list of class attributes.

Label: Supplier Contacts by Supplier Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierContactsBySupplierCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

				currency. This field is applicable if the amount is given in another currency than your default.

96.1.15 SupplierInvoiceLineAttachmentsBySupplierNumber: Visma.net Financials Supplier Invoice Line Attachments by Supplier Number

Get a range of invoices for a specific supplierRequest page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added forced pagination

Catalog: VismaNet

Schema: Supplier

Label: Supplier Invoice Line Attachments by Supplier Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoiceLineAttachmentsBySupplierNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
documentType	string	<input type="checkbox"/>		By type of document. (Waarden: Invoice, CreditAdj, DebitAdj, Prepayment)
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background

Name	Data Type	Required	Default Value	Documentation
				operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApproval	boolean	<input type="checkbox"/>		Set to true to include approval information.
expandAttachment	boolean	<input type="checkbox"/>		Set to true if you want to see all attachments regarding this document.
expandNote	boolean	<input type="checkbox"/>		Set to true to include description.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
project	string	<input type="checkbox"/>		Filter by the project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.

Name	Data Type	Required	Default Value	Documentation
status	string	<input type="checkbox"/>		The status of the document (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, Printed, Prebooked, Reserved)
supplierNumber	string	<input checked="" type="checkbox"/>		Identifies the supplier for which to return data

Columns of Table Function

The columns of the table function `SupplierInvoiceLineAttachmentsBySupplierNumber` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount	double	Amount	<input type="checkbox"/>	The Top part & Amount & The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab & Default document & The default document that includes the payments requiring approval.
approvalDetails_comment	string		<input type="checkbox"/>	The Approval details tab & Comment & The comment connected with the approval of the payments.
approvalStatus	string	Approval Status	<input type="checkbox"/>	The Top part & Approval status & The status of the document in Visma.net Approval. [New , Canceled, SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.
balance	double	Balance	<input type="checkbox"/>	The Top part & Balance & The balance of the supplier ledger document after VAT (if inclusive) and the discount as specified in the tabs below .
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable

Name	Data Type	Label	Required	Documentation
				if the amount is given in another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
buyerReference	string	Buyer Reference	<input type="checkbox"/>	The Top part > Supplier ref. > The document's original reference number as assigned by the supplier (for informational purposes).
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The Top part > Cash discount > The cash discount amount that has been or will be taken in the document, which the system calculates based in the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The Top part > Cash discount date > The end date of the cash discount period, which the system calculates by using the supplier's credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
cost	double	Cost	<input type="checkbox"/>	The table > Cost > The unit cost of the item or service received from the supplier.
costInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Cost in the selected currency. This field is applicable if the amount is given in another currency than your default.
createdDateTime	datetime	Created	<input type="checkbox"/>	
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.

Name	Data Type	Label	Required	Documentation
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The Top part > Currency > The currency of the document.
curyRetainageAmt	double		<input type="checkbox"/>	
curyRetainageTotal	double		<input type="checkbox"/>	
curyRetainageUnreleasedAmt	double		<input type="checkbox"/>	
date	datetime	Date	<input type="checkbox"/>	The Top part > Date* > The date of the original supplier ledger document; by default, it is the current date, which can be changed.
deferralCode	string		<input type="checkbox"/>	The table > Deferral code > The deferral code assigned to the stock item or non-stock item specified in this document line.
deferralSchedule	int32		<input type="checkbox"/>	The table > Original deferral schedule > A read-only column filled in by the system in the Debit adjustment documents created by the reversing process. It shows the ID of the deferral schedule associated with the original document (such as a purchase invoice).
deferralScheduleNbr	string		<input type="checkbox"/>	The public CD/Code of the deferral schedule visible to user
description	string	Description	<input type="checkbox"/>	The Top part > Description > A user-provided description for this supplier ledger document.
detailTotal	double	Detail Total	<input type="checkbox"/>	The Top part > Detail total > The document total as specified in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountAmount	double		<input type="checkbox"/>	The table > Discount amount > The amount of the line-level discount that has been applied manually or automatically to this line.
discountAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount amount in the selected currency. This field is applicable if the amount is given in a another currency than your default.
discountPercent	double	Discount Percent	<input type="checkbox"/>	The table > Discount percent > The percent of the line-level discount that has been applied manually or automatically.

Name	Data Type	Label	Required	Documentation
discountTotal	double	Discount Total	<input type="checkbox"/>	The Top part > Discount total > The discount total calculated for the document. This total includes discounts of the Group and Document levels.
discountTotalInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountUnitCost	double		<input type="checkbox"/>	Background calculation giving you the Discount unit cost in the default currency.
discountUnitCostInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount unit cost in the selected currency. This field is applicable if the amount is given in a another currency than your default.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Top part > Type > The type of the document. The following types are available: Purchase invoice, credit adjustment, purchase credit note, prepayment.
documentVersionNumber	int64		<input type="checkbox"/>	
dueDate	datetime	Due Date	<input type="checkbox"/>	The Top part > Due date* > The date when payment for the document is due in accordance with the supplier's credit terms.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	The Top part > Currency > The currency of the document.
externalInventoryId	string		<input type="checkbox"/>	The table > External inventory id > External inventory number
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The Top part > Hold > A check box that indicates that the status of the supplier ledger document is On hold.
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
inventoryNumber	string	Inventory Number	<input type="checkbox"/>	The table > Item ID > The unique ID of the particular item or service delivered by the supplier.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	
lineNumber	int32	Line Number	<input type="checkbox"/>	The table > Number at the left indicating the line number of the table.
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.

Name	Data Type	Label	Required	Documentation
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
manualDiscount	boolean		<input type="checkbox"/>	The table > Manual discount > A check box that indicates (if selected) that the discount has been applied manually.
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
name	string	Name	<input type="checkbox"/>	The name of the attachment.
note_1	string		<input type="checkbox"/>	The table > Document details tab and Applications tab > Icon Notes > Pop-up window for providing any user-defined text connected with to invoice.
note	string	Note	<input type="checkbox"/>	The table > Icon Notes > Pop-up window for providing any user-defined text connected with to invoice.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The Top part > OrigInvoiceDate* > The original invoice date of the original supplier ledger document; by default, it is the current date, which can be changed.
payDate	datetime	Pay Date	<input type="checkbox"/>	The Financial details tab > The Payment information section > Pay date* > The date when the invoice should be paid. The date is the difference between the document due date or discount date and the number of days specified in the Payment lead time field in AP303000.
paymentMessage	string		<input type="checkbox"/>	The Financial details tab > The Payment information section > Payment message > The message connected with the payment.

withholdingTaxInCurrency	double		<input type="checkbox"/>	Background calculation giving you the With. tax in your default currency. This field is applicable if the amount is given in another currency than your default.

96.1.17 SupplierInvoicesBySupplierNumber: Visma.net Financials Supplier Invoices by Supplier Number

Get a range of invoices for a specific supplierRequest page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added forced pagination

Catalog: VismaNet

Schema: Supplier

Label: Supplier Invoices by Supplier Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function `SupplierInvoicesBySupplierNumber`. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
documentType	string	<input type="checkbox"/>		By type of document. (Waarden: Invoice, CreditAdj, DebitAdj, Prepayment)
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApproval	boolean	<input type="checkbox"/>		Set to true to include approval information.
expandAttachment	boolean	<input type="checkbox"/>		Set to true if you want to see all attachments regarding this document.
expandNote	boolean	<input type="checkbox"/>		Set to true to include description.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use <code>pagenumber</code> and <code>pagesize</code> for pagination purposes. <code>Pagenumber</code> and

Name	Data Type	Required	Default Value	Documentation
				pagesize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
project	string	<input type="checkbox"/>		Filter by the project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, Printed, Prebooked, Reserved)
supplierNumber	string	<input checked="" type="checkbox"/>		Identifies the supplier for which to return data

Columns of Table Function

The columns of the table function SupplierInvoicesBySupplierNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
amount	double	Amount	<input type="checkbox"/>	The Top part > Amount > The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab > Default document > The default document that includes the payments requiring approval.
approvalDetails_comment	string		<input type="checkbox"/>	The Approval details tab > Comment > The comment connected with the approval of the payments.

Name	Data Type	Label	Required	Documentation
approvalStatus	string	Approval Status	<input type="checkbox"/>	The Top part > Approval status > The status of the document in Visma.net Approval. [New , Canceled, SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.
balance	double	Balance	<input type="checkbox"/>	The Top part > Balance > The balance of the supplier ledger document after VAT (if inclusive) and the discount as specified in the tabs below .
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
buyerReference	string	Buyer Reference	<input type="checkbox"/>	The Top part > Supplier ref. > The document's original reference number as assigned by the supplier (for informational purposes).
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The Top part > Cash discount > The cash discount amount that has been or will be taken in the document, which the system calculates based in the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The Top part > Cash discount date > The end date of the cash discount period, which the system calculates by using the supplier's credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.

96.1.18 SupplierInvoiceTaxDetailLinesBySupplierNumber: Visma.net Financials Supplier Invoice Tax Detail Lines by Supplier Number

Get a range of invoices for a specific supplier. Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size. Change log: 2020-May: Added forced pagination

Catalog: VismaNet

Schema: Supplier

Label: Supplier Invoice Tax Detail Lines by Supplier Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoiceTaxDetailLinesBySupplierNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
documentType	string	<input type="checkbox"/>		By type of document. (Waarden: Invoice, CreditAdj, DebitAdj, Prepayment)
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Name	Data Type	Required	Default Value	Documentation
expandApproval	boolean	<input type="checkbox"/>		Set to true to include approval information.
expandAttachment	boolean	<input type="checkbox"/>		Set to true if you want to see all attachments regarding this document.
expandNote	boolean	<input type="checkbox"/>		Set to true to include description.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.

96.1.20 SupplierPaymentMethodDetailsByCode: Visma.net Financials Supplier Payment Method Details by Code

Get a specific supplier

Catalog: VismaNet

Schema: Supplier

Label: Supplier Payment Method Details by Code

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierPaymentMethodDetailsByCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
supplierCd	string	<input checked="" type="checkbox"/>		Identifies the supplier

Columns of Table Function

The columns of the table function SupplierPaymentMethodDetailsByCode are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
accountReference	string	Account Reference	<input type="checkbox"/>	General information tab > Main contact section > Account ref. > An optional text field that can contain a reference to your company's account number in the supplier's system.
accountUsedForPayment	string		<input type="checkbox"/>	Payment settings tab > Payment settings section > Account used for payment >

Name	Data Type	Label	Required	Documentation
				The bank account to be used for payments to the supplier.
cashAccount	string	Cash Account	<input type="checkbox"/>	Payment settings tab > Payment settings section > Cash account > The cash account to be used for operations with the supplier. You must select a cash account.

96.1.21 SupplierPOBalances: Visma.net Financials Supplier PO Balances

Get the PO balance of a range of suppliers

Catalog: VismaNet

Schema: Supplier

Label: Supplier PO Balances

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierPOBalances. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function Suppliers. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-

defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
attributes	string	<input type="checkbox"/>		
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.

Label: Supplier Documents

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierDocuments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
documentType	string	<input type="checkbox"/>		By type of document. (Waarden: Invoice, CreditAdj, DebitAdj, Prepayment)
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApproval	boolean	<input type="checkbox"/>		Set to true to include approval information.
expandNote	boolean	<input type="checkbox"/>		Set to true to include description.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.

status	string	<input type="checkbox"/>		The status of the document (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, Printed, Prebooked, Reserved)

Columns of Table Function

The columns of the table function SupplierInvoiceAttachments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
amount	double	Amount	<input type="checkbox"/>	The Top part > Amount > The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab > Default document > The default document that includes the payments requiring approval.
approvalDetails_comment	string		<input type="checkbox"/>	The Approval details tab > Comment > The comment connected with the approval of the payments.
approvalStatus	string	Approval Status	<input type="checkbox"/>	The Top part > Approval status > The status of the document in Visma.net Approval. [New , Canceled, SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.
balance	double	Balance	<input type="checkbox"/>	The Top part > Balance > The balance of the supplier ledger document after VAT (if inclusive) and the discount as specified in the tabs below .
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
buyerReference	string	Buyer Reference	<input type="checkbox"/>	The Top part > Supplier ref. > The document's original reference number as assigned by the supplier (for informational purposes).

Name	Data Type	Label	Required	Documentation
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab & The payment information section & Cash account & The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The Top part & Cash discount & The cash discount amount that has been or will be taken in the document, which the system calculates based in the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The Top part & Cash discount date & The end date of the cash discount period, which the system calculates by using the supplier's credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
createdDateTime	datetime	Created	<input type="checkbox"/>	
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. & The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The Top part & Currency & The currency of the document.
curyRetainageTotal	double		<input type="checkbox"/>	
curyRetainageUnreleasedAmt	double		<input type="checkbox"/>	
date	datetime	Date	<input type="checkbox"/>	The Top part & Date* & The date of the original supplier ledger document; by default, it is the current date, which can be changed.
description	string	Description	<input type="checkbox"/>	The Top part & Description & A user-provided description for this supplier ledger document.
detailTotal	double	Detail Total	<input type="checkbox"/>	The Top part & Detail total & The document total as specified in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.

Name	Data Type	Label	Required	Documentation
discountTotal	double	Discount Total	<input type="checkbox"/>	The Top part > Discount total > The discount total calculated for the document. This total includes discounts of the Group and Document levels.
discountTotalInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount total in your default currency. This field is applicable if the amount is given in another currency than your default.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Top part > Type > The type of the document. The following types are available: Purchase invoice, credit adjustment, purchase credit note, prepayment.
documentVersionNumber	int64		<input type="checkbox"/>	
dueDate	datetime	Due Date	<input type="checkbox"/>	The Top part > Due date* > The date when payment for the document is due in accordance with the supplier's credit terms.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	The Top part > Currency > The currency of the document.
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The Top part > Hold > A check box that indicates that the status of the supplier ledger document is On hold.
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
name	string	Name	<input type="checkbox"/>	The name of the attachment.
note	string	Note	<input type="checkbox"/>	The table > Document details tab and Applications tab > Icon Notes > Pop-up window for providing any user-defined text connected with to invoice.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The Top part > OrigInvoiceDate* > The original invoice date of the original supplier ledger document; by

Name	Data Type	Label	Required	Documentation
				default, it is the current date, which can be changed.
payDate	datetime	Pay Date	<input type="checkbox"/>	The Financial details tab & The Payment information section & Pay date* & The date when the invoice should be paid. The date is the difference between the document due date or discount date and the number of days specified in the Payment lead time field in AP303000.
paymentMessage	string		<input type="checkbox"/>	The Financial details tab & The Payment information section & Payment message & The message connected with the payment.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. & The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
paymentRefNo	string	Payment Reference Number	<input type="checkbox"/>	The Top part & Payment ref.no & The payment reference number of the document.
paySelected	boolean		<input type="checkbox"/>	The Financial details tab & The Payment information section & Approved for payment & When set to true indicates that the document is approved for payment.
postPeriod	string	Post Period	<input type="checkbox"/>	The Top part & Post period* & The post period of the payment document. Format MMYYYY.
referenceNumber	string	Reference Number	<input type="checkbox"/>	
retainageApply	boolean		<input type="checkbox"/>	The Top part & Apply retainage & A check box that indicates (if selected) that this invoice is an invoice with retainage.
revision	int32	Revision	<input type="checkbox"/>	The version of the attachment.
roundingDiff	double	Rounding Difference	<input type="checkbox"/>	The Top part & Rounding diff. & The difference between the original invoice amount (including the VAT amount calculated by the system) and rounded invoice amount (including the VAT amount modified by a user for VAT-inclusive items).
roundingDiffInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Rounding diff. in your default currency. This field is applicable if the amount is given in another currency than your default.
status	string	Status	<input type="checkbox"/>	The Top part & Document status & A read-only field that

Name	Data Type	Label	Required	Documentation
				shows the status of the supplier ledger document: [Hold, Balanced, Voided, Scheduled, Open, Closed, Printed, Prebooked, Reserved]
supplier_name	string	Supplier Name	<input type="checkbox"/>	Click the magnifier. > The name.
supplier_number	string	Supplier Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
supplierReference	string		<input type="checkbox"/>	The Top part > Supplier ref. > The document's original reference number as assigned by the supplier (for informational purposes).
supplierTaxZone_defaultTaxCategory_description	string		<input type="checkbox"/>	Name of item/description
supplierTaxZone_defaultTaxCategory_number	string		<input type="checkbox"/>	Number of item
supplierTaxZone_defaultVatCategory	string		<input type="checkbox"/>	Click the magnifier. The Default VAT category for the VAT zone of the supplier, which is specified in the AP303000 window.
supplierTaxZone_description	string		<input type="checkbox"/>	Click the magnifier. The description for the VAT zone of the supplier, which is specified in the AP303000 window.
supplierTaxZone_errorInfo	string		<input type="checkbox"/>	
supplierTaxZone_id	string		<input type="checkbox"/>	Click the magnifier. The identifier for the VAT zone of the supplier, which is specified in the AP303000 window.
supplierTaxZone_metadata_maxPageSize	int64		<input type="checkbox"/>	
supplierTaxZone_metadata_totalCount	int64		<input type="checkbox"/>	
taxCalculationMode	string		<input type="checkbox"/>	The Financial details tab > The VAT section > VAT calculation mode > The VAT calculation mode, which defines which amounts (VAT-inclusive or VAT-exclusive) should be entered in the detail lines of a document (TaxSetting, Gross, Net)
vatAmount	double	VAT Amount	<input type="checkbox"/>	The Top part > VAT amount > The VAT amount to be paid for the document. Enter this amount manually according to the VAT amount specified in the original document.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The Top part > VAT exempt total > The document total that is exempt from VAT.

Name	Data Type	Label	Required	Documentation
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt total in your default currency. This field is applicable if the amount is given in another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The Top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The Top part > VAT total > The total amount of tax paid in the document.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in another currency than your default.
withholdingTax	double		<input type="checkbox"/>	The Top part > With. tax > The amount of withholding tax calculated for the document, if applicable.
withholdingTaxInCurrency	double		<input type="checkbox"/>	Background calculation giving you the With. tax in your default currency. This field is applicable if the amount is given in another currency than your default.

98.1.2 SupplierInvoiceAttachmentsByApprovalDocumentId: Visma.net Financials Supplier Invoice Attachments by Approval Document ID

Get an invoice based on the systemId. SystemID is used for approving supplier invoices

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoice Attachments by Approval Document ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoiceAttachmentsByApprovalDocumentId. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the

execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
systemId	string	<input checked="" type="checkbox"/>		SystemID refers to the approval document id created when the document is sent to approval

Columns of Table Function

The columns of the table function `SupplierInvoiceAttachmentsByApprovalDocumentId` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
amount	double	Amount	<input type="checkbox"/>	The Top part > Amount > The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab > Default document > The default document that includes the payments requiring approval.

98.1.4 SupplierInvoiceAttachmentsByTypeByDocumentTypeInvoiceNumber: Visma.net Financials Supplier Invoice Attachmentsby Type Document Type Invoice Number

Get a specific Invoice

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoice Attachmentsby Type Document Type Invoice Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoiceAttachmentsByTypeByDocumentTypeInvoiceNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
documentType	string	<input checked="" type="checkbox"/>		Identifies the Invoice

Name	Data Type	Required	Default Value	Documentation
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
invoiceNumber	string	<input checked="" type="checkbox"/>		Identifies the Invoice

Columns of Table Function

The columns of the table function `SupplierInvoiceAttachmentsByTypeByDocumentTypeInvoiceNumber` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
amount	double	Amount	<input type="checkbox"/>	The Top part > Amount > The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab > Default document > The default document that includes the payments requiring approval.
approvalDetails_comment	string		<input type="checkbox"/>	The Approval details tab > Comment > The comment connected with the approval of the payments.
approvalStatus	string	Approval Status	<input type="checkbox"/>	The Top part > Approval status > The status of the document in Visma.net Approval. [New , Canceled, SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.

98.1.5 SupplierInvoiceByinvoiceNumber: Visma.net Financials Supplier Invoice by Invoice Number

Get a specific Invoice

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoice by Invoice Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function `SupplierInvoiceByinvoiceNumber`. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
invoiceNumber	string	<input checked="" type="checkbox"/>		Identifies the Invoice

98.1.6 SupplierInvoiceLineAttachments: Visma.net Financials Supplier Invoice Line Attachments

Get a range of Invoices - ScreenId=AP301000. Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoice Line Attachments

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoiceLineAttachments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
documentType	string	<input type="checkbox"/>		By type of document. (Waarden: Invoice, CreditAdj, DebitAdj, Prepayment)
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApproval	boolean	<input type="checkbox"/>		Set to true to include approval information.

Name	Data Type	Required	Default Value	Documentation
expandAttachment	boolean	<input type="checkbox"/>		Set to true if you want to see all attachments regarding this document.
expandNote	boolean	<input type="checkbox"/>		Set to true to include description.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
project	string	<input type="checkbox"/>		Filter by the project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, Printed, Prebooked, Reserved)

Columns of Table Function

The columns of the table function `SupplierInvoiceLineAttachments` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
<code>account_description</code>	string	Account Description	<input type="checkbox"/>	Name of item/description
<code>account_externalCode1</code>	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
<code>account_externalCode2</code>	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
<code>account_number</code>	string	Account Number	<input type="checkbox"/>	Number of item
<code>account_type</code>	string	Account Type	<input type="checkbox"/>	Account & The account number.
<code>amount</code>	double	Amount	<input type="checkbox"/>	The Top part & Amount & The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
<code>approvalDetails_attachmentID</code>	string		<input type="checkbox"/>	The Approval details tab & Default document & The default document that includes the payments requiring approval.
<code>approvalDetails_comment</code>	string		<input type="checkbox"/>	The Approval details tab & Comment & The comment connected with the approval of the payments.
<code>approvalStatus</code>	string	Approval Status	<input type="checkbox"/>	The Top part & Approval status & The status of the document in Visma.net Approval. [New , Canceled, SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.
<code>balance</code>	double	Balance	<input type="checkbox"/>	The Top part & Balance & The balance of the supplier ledger document after VAT (if inclusive) and the discount as specified in the tabs below .
<code>balanceInCurrency</code>	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
<code>branchNumber_name_1</code>	string		<input type="checkbox"/>	Click the magnifier. & The name.
<code>branchNumber_name</code>	string	Branch Name	<input type="checkbox"/>	Click the magnifier. & The name.
<code>branchNumber_number_1</code>	string		<input type="checkbox"/>	Click the magnifier. & The identifier.
<code>branchNumber_number</code>	string	Branch Number	<input type="checkbox"/>	Click the magnifier. & The identifier.
<code>buyerReference</code>	string	Buyer Reference	<input type="checkbox"/>	The Top part & Supplier ref. & The document's original

Name	Data Type	Label	Required	Documentation
				reference number as assigned by the supplier (for informational purposes).
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated w ith the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The Top part > Cash discount > The cash discount amount that has been or w ill be taken in the document, w hich the system calculates based in the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The Top part > Cash discount date > The end date of the cash discount period, w hich the system calculates by using the supplier's credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
cost	double	Cost	<input type="checkbox"/>	The table > Cost > The unit cost of the item or service received from the supplier.
costInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Cost in the selected currency.This field is applicable if the amount is given in a another currency than your default.
createdDateTime	datetime	Created	<input type="checkbox"/>	
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The Top part > Currency > The currency of the document.
curyRetainageAmt	double		<input type="checkbox"/>	
curyRetainageTotal	double		<input type="checkbox"/>	
curyRetainageUnreleasedAmt	double		<input type="checkbox"/>	
date	datetime	Date	<input type="checkbox"/>	The Top part > Date* > The date of the original supplier ledger document; by default, it is the current date, w hich can be changed.

Name	Data Type	Label	Required	Documentation
deferralCode	string		<input type="checkbox"/>	The table & Deferral code & The deferral code assigned to the stock item or non-stock item specified in this document line.
deferralSchedule	int32		<input type="checkbox"/>	The table & Original deferral schedule & A read-only column filled in by the system in the Debit adjustment documents created by the reversing process. It shows the ID of the deferral schedule associated with the original document (such as a purchase invoice).
deferralScheduleNbr	string		<input type="checkbox"/>	The public CD/Code of the deferral schedule visible to user
description	string	Description	<input type="checkbox"/>	The Top part & Description & A user-provided description for this supplier ledger document.
detailTotal	double	Detail Total	<input type="checkbox"/>	The Top part & Detail total & The document total as specified in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountAmount	double		<input type="checkbox"/>	The table & Discount amount & The amount of the line-level discount that has been applied manually or automatically to this line.
discountAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount amount in the selected currency. This field is applicable if the amount is given in another currency than your default.
discountPercent	double	Discount Percent	<input type="checkbox"/>	The table & Discount percent & The percent of the line-level discount that has been applied manually or automatically.
discountTotal	double	Discount Total	<input type="checkbox"/>	The Top part & Discount total & The discount total calculated for the document. This total includes discounts of the Group and Document levels.
discountTotalInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountUnitCost	double		<input type="checkbox"/>	Background calculation giving you the Discount unit cost in the default currency.

Name	Data Type	Label	Required	Documentation
discountUnitCostInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount unit cost in the selected currency. This field is applicable if the amount is given in a another currency than your default.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Top part > Type > The type of the document. The following types are available: Purchase invoice, credit adjustment, purchase credit note, prepayment.
documentVersionNumber	int64		<input type="checkbox"/>	
dueDate	datetime	Due Date	<input type="checkbox"/>	The Top part > Due date* > The date when payment for the document is due in accordance with the supplier's credit terms.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	The Top part > Currency > The currency of the document.
externalInventoryId	string		<input type="checkbox"/>	The table > External inventory id > External inventory number
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The Top part > Hold > A check box that indicates that the status of the supplier ledger document is On hold.
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
inventoryNumber	string	Inventory Number	<input type="checkbox"/>	The table > Item ID > The unique ID of the particular item or service delivered by the supplier.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	
lineNumber	int32	Line Number	<input type="checkbox"/>	The table > Number at the left indicating the line number of the table.
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
manualDiscount	boolean		<input type="checkbox"/>	The table > Manual discount > A check box that indicates (if selected) that the discount has been applied manually.
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
name	string	Name	<input type="checkbox"/>	The name of the attachment.
note_1	string		<input type="checkbox"/>	The table > Document details tab and Applications tab >

Name	Data Type	Label	Required	Documentation
				Icon Notes & Pop-up window for providing any user-defined text connected with to invoice.
note	string	Note	<input type="checkbox"/>	The table & Icon Notes & Pop-up window for providing any user-defined text connected with to invoice.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The Top part & OrigInvoiceDate* & The original invoice date of the original supplier ledger document; by default, it is the current date, which can be changed.
payDate	datetime	Pay Date	<input type="checkbox"/>	The Financial details tab & The Payment information section & Pay date* & The date when the invoice should be paid. The date is the difference between the document due date or discount date and the number of days specified in the Payment lead time field in AP303000.
paymentMessage	string		<input type="checkbox"/>	The Financial details tab & The Payment information section & Payment message & The message connected with the payment.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. & The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
paymentRefNo	string	Payment Reference Number	<input type="checkbox"/>	The Top part & Payment ref.no & The payment reference number of the document.
paySelected	boolean		<input type="checkbox"/>	The Financial details tab & The Payment information section & Approved for payment & When set to true indicates that the document is approved for payment.
poLineNr	int32		<input type="checkbox"/>	The table & Purchase order line & The line number of the purchase order line linked to this line of the invoice.
poNumber	string	PO Number	<input type="checkbox"/>	The table & Purchase order number & The number of the purchase order linked to this line of the invoice.
poReceiptLineNbr	int32		<input type="checkbox"/>	The table & Purchase order receipt line & The line number of the purchase receipt's line that is linked to this line of the invoice.
poReceiptNbr	string		<input type="checkbox"/>	The table & Purchase order receipt no. & The number of the purchase receipt linked to this line of the invoice.

Name	Data Type	Label	Required	Documentation
postPeriod	string	Post Period	<input type="checkbox"/>	The Top part & Post period* & The post period of the payment document. Format MMYYYY.
project_description	string	Project Description	<input type="checkbox"/>	Click on the magnifier. & The description.
project_id	string	Project ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
projectTask_description	string	Project Task Description	<input type="checkbox"/>	Click on the magnifier. & The description.
projectTask_id	string	Project Task ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.
quantity	double	Quantity	<input type="checkbox"/>	The table & Quantity & The quantity of the item or service to be delivered by the supplier.
referenceNumber	string	Reference Number	<input type="checkbox"/>	
retainageApply	boolean		<input type="checkbox"/>	The Top part & Apply retainage & A check box that indicates (if selected) that this invoice is an invoice with retainage.
retainagePct	double		<input type="checkbox"/>	
revision	int32	Revision	<input type="checkbox"/>	The version of the attachment.
roundingDiff	double	Rounding Difference	<input type="checkbox"/>	The Top part & Rounding diff. & The difference between the original invoice amount (including the VAT amount calculated by the system) and rounded invoice amount (including the VAT amount modified by a user for VAT-inclusive items).
roundingDiffInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Rounding diff. in your default currency. This field is applicable if the amount is given in another currency than your default.
splitHierarchy	string		<input type="checkbox"/>	The table & Split hierarchy & The number of the original row that has been split.
status	string	Status	<input type="checkbox"/>	The Top part & Document status & A read-only field that shows the status of the supplier ledger document:[Hold, Balanced, Voided, Scheduled, Open, Closed, Printed, Prebooked, Reserved]
stockItem	boolean	Stock Item	<input type="checkbox"/>	Background information indicating whether the item is a stock item or not.
subaccount_active	boolean		<input type="checkbox"/>	Active & The status of the identifier.
subaccount_description	string	Subaccount Description	<input type="checkbox"/>	Description & The description of the identifier.

Name	Data Type	Label	Required	Documentation
subaccount_errorInfo	string	Sub Account Error Message	<input type="checkbox"/>	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	<input type="checkbox"/>	System generated information.
subaccount_metadata_maxPageSize	int64		<input type="checkbox"/>	
subaccount_metadata_totalCount	int64		<input type="checkbox"/>	
subaccount_subaccountId	int32	Sub Account ID	<input type="checkbox"/>	SubID > The identifier of the subaccount.

unitCost	double	Unit Cost	<input type="checkbox"/>	The table > Unit cost > The unit cost of the item.
unitCostInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Unit cost in the selected currency. This field is applicable if the amount is given in a another currency than your default.
uom	string	Unit of Measure	<input type="checkbox"/>	The table > UoM > The unit of measure for the item.
vatAmount	double	VAT Amount	<input type="checkbox"/>	The Top part > VAT amount > The VAT amount to be paid for the document. Enter this amount manually according to the VAT amount specified in the original document.
vatCode_description	string	VAT Code Description	<input type="checkbox"/>	Click on the magnifier. > The description.
vatCode_id	string	VAT Code ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The Top part > VAT exempt total > The document total that is exempt from VAT.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt total in your default currency. This field is applicable if the amount is given in another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The Top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The Top part > VAT total > The total amount of tax paid in the document.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in another currency than your default.
withholdingTax	double		<input type="checkbox"/>	The Top part > With. tax > The amount of withholding tax calculated for the document, if applicable.

Name	Data Type	Label	Required	Documentation
withholdingTaxInCurrency	double		<input type="checkbox"/>	Background calculation giving you the With. tax in your default currency. This field is applicable if the amount is given in another currency than your default.

98.1.7 SupplierInvoiceLineAttachmentsByApprovalDocumentId: Visma.net Financials Supplier Invoice Line Attachments by Approval Document ID

Get an invoice based on the systemId. SystemID is used for approving supplier invoices

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoice Line Attachments by Approval Document ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoiceLineAttachmentsByApprovalDocumentId. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Name	Data Type	Required	Default Value	Documentation
systemId	string	<input checked="" type="checkbox"/>		SystemID refers to the approval document id created when the document is sent to approval

vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The Top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in another currency than your default.

Name	Data Type	Label	Required	Documentation
vatTotal	double	VAT Total	<input type="checkbox"/>	The Top part > VAT total > The total amount of tax paid in the document.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in another currency than your default.
w ithholdingTax	double		<input type="checkbox"/>	The Top part > With. tax > The amount of w ithholding tax calculated for the document, if applicable.
w ithholdingTaxInCurrency	double		<input type="checkbox"/>	Background calculation giving you the With. tax in your default currency. This field is applicable if the amount is given in another currency than your default.

98.1.8 SupplierInvoiceLineAttachmentsByNumber: Visma.net Financials Supplier Invoice Line Attachments by Number

Get a specific Invoice

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoice Line Attachments by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoiceLineAttachmentsByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.

Name	Data Type	Required	Default Value	Documentation
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
invoiceNumber	string	<input checked="" type="checkbox"/>		Identifies the Invoice

Columns of Table Function

The columns of the table function `SupplierInvoiceLineAttachmentsByNumber` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The Top part > Amount > The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab > Default document > The default document that includes the payments requiring approval.
approvalDetails_comment	string		<input type="checkbox"/>	The Approval details tab > Comment > The comment connected with the approval of the payments.
approvalStatus	string	Approval Status	<input type="checkbox"/>	The Top part > Approval status > The status of the document in Visma.net Approval. [New , Canceled, SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.
balance	double	Balance	<input type="checkbox"/>	The Top part > Balance > The balance of the supplier ledger document after VAT (if

Name	Data Type	Label	Required	Documentation
				inclusive) and the discount as specified in the tabs below .
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
buyerReference	string	Buyer Reference	<input type="checkbox"/>	The Top part > Supplier ref. > The document's original reference number as assigned by the supplier (for informational purposes).
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The Top part > Cash discount > The cash discount amount that has been or will be taken in the document, which the system calculates based in the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The Top part > Cash discount date > The end date of the cash discount period, which the system calculates by using the supplier's credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.

				is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The Top part > VAT total > The total amount of tax paid in the document.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in another currency than your default.
withholdingTax	double		<input type="checkbox"/>	The Top part > With. tax > The amount of withholding tax calculated for the document, if applicable.
withholdingTaxInCurrency	double		<input type="checkbox"/>	Background calculation giving you the With. tax in your default currency. This field is applicable if the amount is given in another currency than your default.

98.1.9 SupplierInvoiceLineAttachmentsByTypeByDocumentTypeInvoiceNumber: Visma.net Financials Supplier Invoice Line Attachments by Type Document Type Invoice Number

Get a specific Invoice

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoice Line Attachments by Type Document Type Invoice Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoiceLineAttachmentsByTypeByDocumentTypeInvoiceNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
documentType	string	<input checked="" type="checkbox"/>		Identifies the Invoice
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
invoiceNumber	string	<input checked="" type="checkbox"/>		Identifies the Invoice

Columns of Table Function

The columns of the table function SupplierInvoiceLineAttachmentsByTypeByDocumentTypeInvoiceNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The Top part > Amount > The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab > Default document > The default document that includes the payments requiring approval.
approvalDetails_comment	string		<input type="checkbox"/>	The Approval details tab > Comment > The comment connected with the approval of the payments.
approvalStatus	string	Approval Status	<input type="checkbox"/>	The Top part > Approval status > The status of the document in Visma.net Approval. [New , Canceled,

Name	Data Type	Label	Required	Documentation
				SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.
balance	double	Balance	<input type="checkbox"/>	The Top part > Balance > The balance of the supplier ledger document after VAT (if inclusive) and the discount as specified in the tabs below .
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
buyerReference	string	Buyer Reference	<input type="checkbox"/>	The Top part > Supplier ref. > The document's original reference number as assigned by the supplier (for informational purposes).
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The Top part > Cash discount > The cash discount amount that has been or will be taken in the document, which the system calculates based in the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The Top part > Cash discount date > The end date of the cash discount period, which the system calculates by using the supplier's credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.

Name	Data Type	Label	Required	Documentation
cost	double	Cost	<input type="checkbox"/>	The table & Cost &; The unit cost of the item or service received from the supplier.
costInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Cost in the selected currency. This field is applicable if the amount is given in a another currency than your default.
createdDateTime	datetime	Created	<input type="checkbox"/>	
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. &; The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. &; The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The Top part &; Currency &; The currency of the document.
curyRetainageAmt	double		<input type="checkbox"/>	
curyRetainageTotal	double		<input type="checkbox"/>	
curyRetainageUnreleasedAmt	double		<input type="checkbox"/>	
date	datetime	Date	<input type="checkbox"/>	The Top part &; Date* &; The date of the original supplier ledger document; by default, it is the current date, w hich can be changed.
deferralCode	string		<input type="checkbox"/>	The table &; Deferral code &; The deferral code assigned to the stock item or non-stock item specified in this document line.
deferralSchedule	int32		<input type="checkbox"/>	The table &; Original deferral schedule &; A read-only column filled in by the system in the Debit adjustment documents created by the reversing process. It show s the ID of the deferral schedule associated w ith the original document (such as a purchase invoice).
deferralScheduleNbr	string		<input type="checkbox"/>	The public CD/Code of the deferral schedule visible to user
description	string	Description	<input type="checkbox"/>	The Top part &; Description &; A user-provided description for this supplier ledger document.
detailTotal	double	Detail Total	<input type="checkbox"/>	The Top part &; Detail total &; The document total as specified in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountAmount	double		<input type="checkbox"/>	The table &; Discount amount &; The amount of the line-level discount that has been applied

Name	Data Type	Label	Required	Documentation
				manually or automatically to this line.
discountAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount amount in the selected currency. This field is applicable if the amount is given in a another currency than your default.
discountPercent	double	Discount Percent	<input type="checkbox"/>	The table > Discount percent > The percent of the line-level discount that has been applied manually or automatically.
discountTotal	double	Discount Total	<input type="checkbox"/>	The Top part > Discount total > The discount total calculated for the document. This total includes discounts of the Group and Document levels.
discountTotalInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountUnitCost	double		<input type="checkbox"/>	Background calculation giving you the Discount unit cost in the default currency.
discountUnitCostInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount unit cost in the selected currency. This field is applicable if the amount is given in a another currency than your default.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Top part > Type > The type of the document. The following types are available: Purchase invoice, credit adjustment, purchase credit note, prepayment.
documentVersionNumber	int64		<input type="checkbox"/>	
dueDate	datetime	Due Date	<input type="checkbox"/>	The Top part > Due date* > The date w hen payment for the document is due in accordance w ith the supplier's credit terms.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	The Top part > Currency > The currency of the document.
externalInventoryId	string		<input type="checkbox"/>	The table > External inventory id > External inventory number
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to w hich the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The Top part > Hold > A check box that indicates that the status of the supplier ledger document is On hold.

Name	Data Type	Label	Required	Documentation
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
inventoryNumber	string	Inventory Number	<input type="checkbox"/>	The table & Item ID & The unique ID of the particular item or service delivered by the supplier.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	
lineNumber	int32	Line Number	<input type="checkbox"/>	The table & Number at the left indicating the line number of the table.
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier & The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier & The displayed name
manualDiscount	boolean		<input type="checkbox"/>	The table & Manual discount & A check box that indicates (if selected) that the discount has been applied manually.
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
name	string	Name	<input type="checkbox"/>	The name of the attachment.
note_1	string		<input type="checkbox"/>	The table & Document details tab and Applications tab & Icon Notes & Pop-up window for providing any user-defined text connected with to invoice.
note	string	Note	<input type="checkbox"/>	The table & Icon Notes & Pop-up window for providing any user-defined text connected with to invoice.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The Top part & OrigInvoiceDate* & The original invoice date of the original supplier ledger document; by default, it is the current date, which can be changed.
payDate	datetime	Pay Date	<input type="checkbox"/>	The Financial details tab & The Payment information section & Pay date* & The date when the invoice should be paid. The date is the difference between the document due date or discount date and the number of days specified in the Payment lead time field in AP303000.
paymentMessage	string		<input type="checkbox"/>	The Financial details tab & The Payment information section & Payment message & The message connected with the payment.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. & The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. & The identifier.

Name	Data Type	Label	Required	Documentation
paymentRefNo	string	Payment Reference Number	<input type="checkbox"/>	The Top part > Payment ref.no > The payment reference number of the document.
paySelected	boolean		<input type="checkbox"/>	The Financial details tab > The Payment information section > Approved for payment > When set to true indicates that the document is approved for payment.
poLineNr	int32		<input type="checkbox"/>	The table > Purchase order line > The line number of the purchase order line linked to this line of the invoice.
poNumber	string	PO Number	<input type="checkbox"/>	The table > Purchase order number > The number of the purchase order linked to this line of the invoice.
poReceiptLineNbr	int32		<input type="checkbox"/>	The table > Purchase order receipt line > The line number of the purchase receipt's line that is linked to this line of the invoice.
poReceiptNbr	string		<input type="checkbox"/>	The table > Purchase order receipt no. > The number of the purchase receipt linked to this line of the invoice.
postPeriod	string	Post Period	<input type="checkbox"/>	The Top part > Post period* > The post period of the payment document. Format MMYYYY.
project_description	string	Project Description	<input type="checkbox"/>	Click on the magnifier. > The description.
project_id	string	Project ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
projectTask_description	string	Project Task Description	<input type="checkbox"/>	Click on the magnifier. > The description.
projectTask_id	string	Project Task ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
quantity	double	Quantity	<input type="checkbox"/>	The table > Quantity > The quantity of the item or service to be delivered by the supplier.
referenceNumber	string	Reference Number	<input type="checkbox"/>	
retainageApply	boolean		<input type="checkbox"/>	The Top part > Apply retainage > A check box that indicates (if selected) that this invoice is an invoice with retainage.
retainagePct	double		<input type="checkbox"/>	
revision	int32	Revision	<input type="checkbox"/>	The version of the attachment.
roundingDiff	double	Rounding Difference	<input type="checkbox"/>	The Top part > Rounding diff. > The difference between the original invoice amount (including the VAT amount calculated by the system) and rounded invoice amount (including the VAT

Name	Data Type	Label	Required	Documentation
				amount modified by a user for VAT-inclusive items).
roundingDiffInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Rounding diff. in your default currency. This field is applicable if the amount is given in another currency than your default.
splitHierarchy	string		<input type="checkbox"/>	The table & Split hierarchy & The number of the original row that has been split.
status	string	Status	<input type="checkbox"/>	The Top part & Document status & A read-only field that shows the status of the supplier ledger document:[Hold, Balanced, Voided, Scheduled, Open, Closed, Printed, Prebooked, Reserved]
stockItem	boolean	Stock Item	<input type="checkbox"/>	Background information indicating whether the item is a stock item or not.
subaccount_active	boolean		<input type="checkbox"/>	Active & The status of the identifier.
subaccount_description	string	Subaccount Description	<input type="checkbox"/>	Description & The description of the identifier.
subaccount_errorInfo	string	Sub Account Error Message	<input type="checkbox"/>	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	<input type="checkbox"/>	System generated information.
subaccount_metadata_maxPageSize	int64		<input type="checkbox"/>	
subaccount_metadata_totalCount	int64		<input type="checkbox"/>	
subaccount_subaccountId	int32	Sub Account ID	<input type="checkbox"/>	SubID & The identifier of the subaccount.
subaccount_subaccountNumber	string	Sub Account Number	<input type="checkbox"/>	Mandatory field: Subaccount* & The subaccount number. Format 9-XX.
supplier_name	string	Supplier Name	<input type="checkbox"/>	Click the magnifier. & The name.
supplier_number	string	Supplier Number	<input type="checkbox"/>	Click the magnifier. & The identifier.
supplierReference	string		<input type="checkbox"/>	The Top part & Supplier ref. & The document's original reference number as assigned by the supplier (for informational purposes).
supplierTaxZone_defaultTaxCategory_description	string		<input type="checkbox"/>	Name of item/description

taxCalculationMode	string		<input type="checkbox"/>	The Financial details tab > The VAT section > VAT calculation mode > The VAT calculation mode, which defines which amounts (VAT-inclusive or VAT-exclusive) should be entered in the detail lines of a document (TaxSetting, Gross, Net)
termEndDate	datetime	Term End Date	<input type="checkbox"/>	
termStartDate	datetime	Term Start Date	<input type="checkbox"/>	
transactionDescription	string		<input type="checkbox"/>	The table > Transaction descr. > Any description relevant to the transaction. An alphanumeric string of up to 30 characters may be used.
unitCost	double	Unit Cost	<input type="checkbox"/>	The table > Unit cost > The unit cost of the item.
unitCostInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Unit cost in the selected currency. This field is applicable if the amount is given in a another currency than your default.
uom	string	Unit of Measure	<input type="checkbox"/>	The table > UoM > The unit of measure for the item.
vatAmount	double	VAT Amount	<input type="checkbox"/>	The Top part > VAT amount > The VAT amount to be paid for the document. Enter this amount manually according to the VAT amount specified in the original document.
vatCode_description	string	VAT Code Description	<input type="checkbox"/>	Click on the magnifier. > The description.
vatCode_id	string	VAT Code ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.

Name	Data Type	Label	Required	Documentation
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The Top part > VAT exempt total > The document total that is exempt from VAT.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt total in your default currency. This field is applicable if the amount is given in another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The Top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The Top part > VAT total > The total amount of tax paid in the document.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in another currency than your default.
withholdingTax	double		<input type="checkbox"/>	The Top part > With. tax > The amount of withholding tax calculated for the document, if applicable.
withholdingTaxInCurrency	double		<input type="checkbox"/>	Background calculation giving you the With. tax in your default currency. This field is applicable if the amount is given in another currency than your default.

98.1.11 SupplierInvoiceLinesByApprovalDocumentId: Visma.net Financials Supplier Invoice Lines by Approval Document ID

Get an invoice based on the systemId. SystemID is used for approving supplier invoices

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoice Lines by Approval Document ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function `SupplierInvoiceLinesByApprovalDocumentId`. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
systemId	string	<input checked="" type="checkbox"/>		SystemID refers to the approval document id created when the document is sent to approval

Columns of Table Function

The columns of the table function `SupplierInvoiceLinesByApprovalDocumentId` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class & The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class & The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account & The account number.
amount	double	Amount	<input type="checkbox"/>	The Top part & Amount & The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab & Default document & The

Name	Data Type	Label	Required	Documentation
				default document that includes the payments requiring approval.
approvalDetails_comment	string		<input type="checkbox"/>	The Approval details tab & Comment & The comment connected with the approval of the payments.
approvalStatus	string	Approval Status	<input type="checkbox"/>	The Top part & Approval status & The status of the document in Visma.net Approval. [New , Canceled, SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.
balance	double	Balance	<input type="checkbox"/>	The Top part & Balance & The balance of the supplier ledger document after VAT (if inclusive) and the discount as specified in the tabs below .
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. & The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. & The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. & The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. & The identifier.
buyerReference	string	Buyer Reference	<input type="checkbox"/>	The Top part & Supplier ref. & The document's original reference number as assigned by the supplier (for informational purposes).
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab & The payment information section & Cash account & The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The Top part & Cash discount & The cash discount amount that has been or will be taken in the document, which the system calculates based in the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The Top part & Cash discount date & The end date of the cash discount period, which the system calculates by using the supplier's credit terms.

Name	Data Type	Label	Required	Documentation
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.

98.1.12 SupplierInvoiceLinesByNumber: Visma.net Financials Supplier Invoice Lines by Number

Get a specific Invoice

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoice Lines by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoiceLinesByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
invoiceNumber	string	<input checked="" type="checkbox"/>		Identifies the Invoice

Columns of Table Function

The columns of the table function SupplierInvoiceLinesByNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_externalCode1	string	Account External Code 1	<input type="checkbox"/>	Account class > The identifier of the account class.
account_externalCode2	string	Account External Code 2	<input type="checkbox"/>	Account class > The name of the account class.
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	Account > The account number.
amount	double	Amount	<input type="checkbox"/>	The Top part > Amount > The amount to be paid for the

Name	Data Type	Label	Required	Documentation
				document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab > Default document > The default document that includes the payments requiring approval.
approvalDetails_comment	string		<input type="checkbox"/>	The Approval details tab > Comment > The comment connected with the approval of the payments.
approvalStatus	string	Approval Status	<input type="checkbox"/>	The Top part > Approval status > The status of the document in Visma.net Approval. [New , Canceled, SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.
balance	double	Balance	<input type="checkbox"/>	The Top part > Balance > The balance of the supplier ledger document after VAT (if inclusive) and the discount as specified in the tabs below .
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.

98.1.14 SupplierInvoices: Visma.net Financials Supplier Invoices

Get a range of Invoices - ScreenId=AP301000. Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page size

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoices

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoices. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
documentType	string	<input type="checkbox"/>		By type of document. (Waarden: Invoice, CreditAdj, DebitAdj, Prepayment)
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandApproval	boolean	<input type="checkbox"/>		Set to true to include approval information.
expandAttachment	boolean	<input type="checkbox"/>		Set to true if you want to see all attachments regarding this document.
expandNote	boolean	<input type="checkbox"/>		Set to true to include description.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.

Name	Data Type	Required	Default Value	Documentation
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
project	string	<input type="checkbox"/>		Filter by the project with which the document is associated.
released	int32	<input type="checkbox"/>		Parameter for showing if invoice has been released or not.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document (Waarden: Hold, Balanced, Voided, Scheduled, Open, Closed, Printed, Prebooked, Reserved)

Columns of Table Function

The columns of the table function SupplierInvoices are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
amount	double	Amount	<input type="checkbox"/>	The Top part > Amount >; The amount to be paid for the document. Equal to the amount (or to the sum of amounts)

Name	Data Type	Label	Required	Documentation
				shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab & The default document that includes the payments requiring approval.
approvalDetails_comment	string		<input type="checkbox"/>	The Approval details tab & Comment & The comment connected with the approval of the payments.
approvalStatus	string	Approval Status	<input type="checkbox"/>	The Top part & Approval status & The status of the document in Visma.net Approval. [New , Canceled, SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.
balance	double	Balance	<input type="checkbox"/>	The Top part & Balance & The balance of the supplier ledger document after VAT (if inclusive) and the discount as specified in the tabs below .
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. & The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. & The identifier.
buyerReference	string	Buyer Reference	<input type="checkbox"/>	The Top part & Supplier ref. & The document's original reference number as assigned by the supplier (for informational purposes).
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab & The payment information section & Cash account & The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The Top part & Cash discount & The cash discount amount that has been or will be taken in the document, which the system calculates based in the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The Top part & Cash discount date & The end date of the cash discount period, which the system calculates by using the supplier's credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your

Name	Data Type	Label	Required	Documentation
				default currency. This field is applicable if the amount is given in another currency than your default.

erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Name	Data Type	Required	Default Value	Documentation
systemId	string	<input checked="" type="checkbox"/>		SystemID refers to the approval document id created when the document is sent to approval

Columns of Table Function

The columns of the table function SupplierInvoicesByApprovalDocumentId are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
amount	double	Amount	<input type="checkbox"/>	The Top part > Amount > The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab > Default document > The default document that includes the payments requiring approval.
approvalDetails_comment	string		<input type="checkbox"/>	The Approval details tab > Comment > The comment connected with the approval of the payments.
approvalStatus	string	Approval Status	<input type="checkbox"/>	The Top part > Approval status > The status of the document in Visma.net Approval. [New , Canceled, SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.
balance	double	Balance	<input type="checkbox"/>	The Top part > Balance > The balance of the supplier ledger document after VAT (if inclusive) and the discount as specified in the tabs below .
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
buyerReference	string	Buyer Reference	<input type="checkbox"/>	The Top part > Supplier ref. > The document's original reference number as assigned by the supplier (for informational purposes).
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section >

Name	Data Type	Label	Required	Documentation
				Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The Top part > Cash discount > The cash discount amount that has been or will be taken in the document, which the system calculates based in the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The Top part > Cash discount date > The end date of the cash discount period, which the system calculates by using the supplier's credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
createdDateTime	datetime	Created	<input type="checkbox"/>	
creditTerms_description	string	Credit Terms Description	<input type="checkbox"/>	Click on the magnifier. > The description.
creditTerms_id	string	Credit Terms ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
currencyId	string	Currency ID	<input type="checkbox"/>	The Top part > Currency > The currency of the document.
curyRetainageTotal	double		<input type="checkbox"/>	
curyRetainageUnreleasedAmt	double		<input type="checkbox"/>	
date	datetime	Date	<input type="checkbox"/>	The Top part > Date* > The date of the original supplier ledger document; by default, it is the current date, which can be changed.
description	string	Description	<input type="checkbox"/>	The Top part > Description > A user-provided description for this supplier ledger document.
detailTotal	double	Detail Total	<input type="checkbox"/>	The Top part > Detail total > The document total as specified in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	<input type="checkbox"/>	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in another currency than your default.
discountTotal	double	Discount Total	<input type="checkbox"/>	The Top part > Discount total > The discount total calculated for the document. This total

Name	Data Type	Label	Required	Documentation
				includes discounts of the Group and Document levels.
discountTotalInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Discount total in your default currency. This field is applicable if the amount is given in another currency than your default.
documentType	string	Document Type	<input type="checkbox"/>	The top part > Top part > Type > The type of the document. The following types are available: Purchase invoice, credit adjustment, purchase credit note, prepayment.
documentVersionNumber	int64		<input type="checkbox"/>	
dueDate	datetime	Due Date	<input type="checkbox"/>	The Top part > Due date* > The date when payment for the document is due in accordance with the supplier's credit terms.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	The Top part > Currency > The currency of the document.
financialPeriod	string	Financial Period	<input type="checkbox"/>	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The Top part > Hold > A check box that indicates that the status of the supplier ledger document is On hold.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
note	string	Note	<input type="checkbox"/>	The table > Document details tab and Applications tab > Icon Notes > Pop-up window for providing any user-defined text connected with to invoice.
origInvoiceDate	datetime	Original Invoice Date	<input type="checkbox"/>	The Top part > OrigInvoiceDate* > The original invoice date of the original supplier ledger document; by default, it is the current date, which can be changed.
payDate	datetime	Pay Date	<input type="checkbox"/>	The Financial details tab > The Payment information section > Pay date* > The date when the invoice should be paid. The date is the difference between

Name	Data Type	Label	Required	Documentation
				the document due date or discount date and the number of days specified in the Payment lead time field in AP303000.
paymentMessage	string		<input type="checkbox"/>	The Financial details tab > The Payment information section > Payment message > The message connected with the payment.
paymentMethod_description	string	Payment Method Description	<input type="checkbox"/>	Click on the magnifier. > The description.
paymentMethod_id	string	Payment Method ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
paymentRefNo	string	Payment Reference Number	<input type="checkbox"/>	The Top part > Payment ref.no > The payment reference number of the document.
paySelected	boolean		<input type="checkbox"/>	The Financial details tab > The Payment information section > Approved for payment > When set to true indicates that the document is approved for payment.
postPeriod	string	Post Period	<input type="checkbox"/>	The Top part > Post period* > The post period of the payment document. Format MMYYYY.
referenceNumber	string	Reference Number	<input type="checkbox"/>	
retainageApply	boolean		<input type="checkbox"/>	The Top part > Apply retainage > A check box that indicates (if selected) that this invoice is an invoice with retainage.
roundingDiff	double	Rounding Difference	<input type="checkbox"/>	The Top part > Rounding diff. > The difference between the original invoice amount (including the VAT amount calculated by the system) and rounded invoice amount (including the VAT amount modified by a user for VAT-inclusive items).
roundingDiffInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Rounding diff. in your default currency. This field is applicable if the amount is given in another currency than your default.
status	string	Status	<input type="checkbox"/>	The Top part > Document status > A read-only field that shows the status of the supplier ledger document: [Hold, Balanced, Voided, Scheduled, Open, Closed, Printed, Prebooked, Reserved]
supplier_name	string	Supplier Name	<input type="checkbox"/>	Click the magnifier. > The name.

Name	Data Type	Label	Required	Documentation
supplier_number	string	Supplier Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
supplierReference	string		<input type="checkbox"/>	The Top part > Supplier ref. > The document's original reference number as assigned by the supplier (for informational purposes).
supplierTaxZone_defaultTaxCategory_description	string		<input type="checkbox"/>	Name of item/description
supplierTaxZone_defaultTaxCategory_number	string		<input type="checkbox"/>	Number of item
supplierTaxZone_defaultVatCategory	string		<input type="checkbox"/>	Click the magnifier. The Default VAT category for the VAT zone of the supplier, which is specified in the AP303000 window .
supplierTaxZone_description	string		<input type="checkbox"/>	Click the magnifier. The description for the VAT zone of the supplier, which is specified in the AP303000 window .
supplierTaxZone_errorInfo	string		<input type="checkbox"/>	
supplierTaxZone_id	string		<input type="checkbox"/>	Click the magnifier. The identifier for the VAT zone of the supplier, which is specified in the AP303000 window .
supplierTaxZone_metadata_maxPageSize	int64		<input type="checkbox"/>	
supplierTaxZone_metadata_totalCount	int64		<input type="checkbox"/>	
taxCalculationMode	string		<input type="checkbox"/>	The Financial details tab > The VAT section > VAT calculation mode > The VAT calculation mode, which defines which amounts (VAT-inclusive or VAT-exclusive) should be entered in the detail lines of a document (TaxSetting, Gross, Net)
vatAmount	double	VAT Amount	<input type="checkbox"/>	The Top part > VAT amount > The VAT amount to be paid for the document. Enter this amount manually according to the VAT amount specified in the original document.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The Top part > VAT exempt total > The document total that is exempt from VAT.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT exempt total in your default currency. This field is applicable if the amount is given in another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	<input type="checkbox"/>	The Top part > VAT taxable total > The document total that is subjected to VAT.

Name	Data Type	Label	Required	Documentation
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in another currency than your default.
vatTotal	double	VAT Total	<input type="checkbox"/>	The Top part > VAT total > The total amount of tax paid in the document.
vatTotalInCurrency	double	VAT Total in Currency	<input type="checkbox"/>	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in another currency than your default.
withholdingTax	double		<input type="checkbox"/>	The Top part > With. tax > The amount of withholding tax calculated for the document, if applicable.
withholdingTaxInCurrency	double		<input type="checkbox"/>	Background calculation giving you the With. tax in your default currency. This field is applicable if the amount is given in another currency than your default.

98.1.16 SupplierInvoicesByTypeDocumentTypeInvoiceNumber: Visma.net Financials Supplier Invoices by Type Document Type Invoice Number

Get a specific Invoice

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoices by Type Document Type Invoice Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoicesByTypeDocumentTypeInvoiceNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
documentType	string	<input checked="" type="checkbox"/>		Identifies the Invoice
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
invoiceNumber	string	<input checked="" type="checkbox"/>		Identifies the Invoice

Columns of Table Function

The columns of the table function SupplierInvoicesByTypeDocumentTypeInvoiceNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
amount	double	Amount	<input type="checkbox"/>	The Top part > Amount > The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab > Default document > The default document that includes the payments requiring approval.
approvalDetails_comment	string		<input type="checkbox"/>	The Approval details tab > Comment > The comment connected with the approval of the payments.
approvalStatus	string	Approval Status	<input type="checkbox"/>	The Top part > Approval status > The status of the document in Visma.net Approval. [New , Canceled, SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.
balance	double	Balance	<input type="checkbox"/>	The Top part > Balance > The balance of the supplier ledger document after VAT (if inclusive) and the discount as specified in the tabs below .

Name	Data Type	Label	Required	Documentation
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
buyerReference	string	Buyer Reference	<input type="checkbox"/>	The Top part > Supplier ref. > The document's original reference number as assigned by the supplier (for informational purposes).
cashAccount	string	Cash Account	<input type="checkbox"/>	Financial details tab > The payment information section > Cash account > The cash account associated with the payment method.
cashDiscount	double	Cash Discount	<input type="checkbox"/>	The Top part > Cash discount > The cash discount amount that has been or will be taken in the document, which the system calculates based in the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	The Top part > Cash discount date > The end date of the cash discount period, which the system calculates by using the supplier's credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	<input type="checkbox"/>	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
closedFinancialPeriod	string	Closed Financial Period	<input type="checkbox"/>	Format YYYYMM.

98.1.18 SupplierInvoiceTaxDetailLinesByApprovalDocumentId: Visma.net Financials Supplier Invoice Tax Detail Lines by Approval Document ID

Get an invoice based on the systemId. SystemID is used for approving supplier invoices

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoice Tax Detail Lines by Approval Document ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoiceTaxDetailLinesByApprovalDocumentId. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
systemId	string	<input checked="" type="checkbox"/>		SystemID refers to the approval document id created when the document is sent to approval

Columns of Table Function

The columns of the table function SupplierInvoiceTaxDetailLinesByApprovalDocumentId are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
amount	double	Amount	<input type="checkbox"/>	The Top part > Amount > The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.
approvalDetails_attachmentID	string		<input type="checkbox"/>	The Approval details tab > Default document > The default document that includes the payments requiring approval.
approvalDetails_comment	string		<input type="checkbox"/>	The Approval details tab > Comment > The comment connected with the approval of the payments.
approvalStatus	string	Approval Status	<input type="checkbox"/>	The Top part > Approval status > The status of the document in Visma.net Approval. [New , Canceled, SentToApproval, ReceivedByApproval, InProgressApproval, RejectedInApproval, ApprovedInApproval, ActiveWorkflow Approval.
balance	double	Balance	<input type="checkbox"/>	The Top part > Balance > The balance of the supplier ledger document after VAT (if inclusive) and the discount as specified in the tabs below .
balanceInCurrency	double	Balance in Currency	<input type="checkbox"/>	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in another currency than your default.

98.1.20 SupplierInvoiceTaxDetailsByTypeByDocumentTypeInvoiceNumber: Visma.net Financials Supplier Invoice Tax Details by Type Document Type Invoice Number

Get a specific Invoice

Catalog: VismaNet

Schema: SupplierInvoice

Label: Supplier Invoice Tax Details by Type Document Type Invoice Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierInvoiceTaxDetailsByTypeByDocumentTypeInvoiceNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
documentType	string	<input checked="" type="checkbox"/>		Identifies the Invoice
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
invoiceNumber	string	<input checked="" type="checkbox"/>		Identifies the Invoice

Columns of Table Function

The columns of the table function `SupplierInvoiceTaxDetailsByTypeByDocumentTypeInvoiceNumber` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
amount	double	Amount	<input type="checkbox"/>	The Top part > Amount > The amount to be paid for the document. Equal to the amount (or to the sum of amounts) shown in the Amount column of the Document details tab.

99.1.3 SupplierPaymentLines: Visma.net Financials Supplier Payment Lines

Get all SupplierPayments. Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page sizeScreenId=AP302000

Catalog: VismaNet

Schema: SupplierPayment

Label: Supplier Payment Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SupplierPaymentLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a

pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

102.1.3 VATCategoriesById: Visma.net Financials VAT Categories by ID

Get a specific Vat - TX205000

Catalog: VismaNet

Schema: Vat

Label: VAT Categories by ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter

case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function VATCategoriesByld. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
vatId	string	<input checked="" type="checkbox"/>		Mandatory. Value for VatID to be looked for.

Columns of Table Function

The columns of the table function VATCategoriesByld are shown below. Each column has an SQL data type.

Get a range of Vats - ScreenId=TX205000

Catalog: VismaNet

Schema: Vat

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function VatVats_CategoriesVatCategoryLinesVatRates. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the

106 Schema: Warehouse

106.1 Tables

106.1.1 WarehouseBywarehouseID: Visma.net Financials Warehouse by Warehouse ID

Get a specific Warehouse

Catalog: VismaNet

Schema: Warehouse

Label: Warehouse by Warehouse ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function WarehouseBywarehouseID. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
warehouseID	string	<input checked="" type="checkbox"/>		Identifies the Warehouse

Columns of Table Function

The columns of the table function WarehouseBywarehouseID are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
active	boolean	Active	<input type="checkbox"/>	The top part > Active > This check box indicates (if selected) that the warehouse is active.
address_addressId	int32	Address ID	<input type="checkbox"/>	Information retrieved from the system.
address_addressLine1	string	Address Line 1	<input type="checkbox"/>	Address ! > The first line in the address of the warehouse.
address_addressLine2	string	Address Line 2	<input type="checkbox"/>	Address 2 > The second line in the warehouse address.

Name	Data Type	Label	Required	Documentation
address_addressType	string	Address Type	<input type="checkbox"/>	Information retrieved from the system.
address_city	string	City	<input type="checkbox"/>	City > The city of the warehouse address.
address_country_errorInfo	string		<input type="checkbox"/>	
address_country_id	string	Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
address_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
address_country_metadata_totalCount	int64		<input type="checkbox"/>	
address_country_name	string	Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
address_county_id	string	County ID	<input type="checkbox"/>	Click the magnifier > The identifier
address_county_name	string	County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
address_postalCode	string	Postal Code	<input type="checkbox"/>	Postcode > The postcode relevant for the warehouse address.
address_validated	boolean	Address Validated	<input type="checkbox"/>	Information retrieved from the system.
avgDefaultCost	string		<input type="checkbox"/>	The top part > Avg. default return cost > For items with the Average valuation method, the option that defines which of costs should be used for returns and receipts.

106.1.2 WarehouseLocations: Visma.net Financials Warehouse Locations

Get a range of Warehouses - ScreenId=IN204000

Catalog: VismaNet

Schema: Warehouse

Label: Warehouse Locations

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function WarehouseLocations. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function WarehouseLocations are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
active_1	boolean		<input type="checkbox"/>	The top part > Active > This check box indicates (if selected) that the warehouse is active.
active	boolean	Active	<input type="checkbox"/>	Active > This check box indicates whether this location is active.
address_addressId	int32	Address ID	<input type="checkbox"/>	Information retrieved from the system.
address_addressLine1	string	Address Line 1	<input type="checkbox"/>	Address ! > The first line in the address of the warehouse.
address_addressLine2	string	Address Line 2	<input type="checkbox"/>	Address 2 > The second line in the warehouse address.
