erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandAttachments	boolean	<input type="checkbox"/>		If true there will be included all attachments regarding batch. Default on false
lastModifiedDateTime	string	<input type="checkbox"/>		When setting this parameter there will be exported only the batches changed or created since the provided date and time. Mandatory if 'PeriodId' is not provided. Format: yyyy-MM-dd HH:mm:ss
module	string	<input type="checkbox"/>		Module to query data for. Allowed values: GL, AP, AR, CM, CA, IN, DR, FA, PM
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
periodId	string	<input type="checkbox"/>		Financial Period to query data for. Mandatory if 'LastModifiedDateTime' not provided. Format: YYYYPP
releasedBatch	boolean	<input type="checkbox"/>		If true there will be exported the batches having Released flag on true. If false there will be exported the batches having Released flag on false. If not set no filtering based on Released flag is applied

Columns of Table Function

The columns of the table function JournalTransactionAttachmentsByPeriodOrDateV2 are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
autoReversing	boolean		<input type="checkbox"/>	The top part > Automatic reversing > A check box that indicates (if selected) that the batch is auto-reversing.
batchNumber	string	Batch Number	<input type="checkbox"/>	The top part > Batch number > The unique ID of the batch, which is generated by the numbering sequence assigned to batches in the GL102000 window .
branch	string	Branch	<input type="checkbox"/>	The top part > Branch > The branch to which this batch is related. This field is available if your company is set up with branches.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
controlTotal	double	Total for Control	<input type="checkbox"/>	The top part > Control total > The control total of the batch, which is used for batch status validation.
controlTotalInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Control total in your default currency. This field is applicable if the amount is given in another currency than your default.
createVatTransaction	boolean		<input type="checkbox"/>	The top part > Create VAT transactions > A check box that indicates (if selected) that a VAT-related transaction can be created manually; select this check box when you begin to create the transaction.
creditTotal	double		<input type="checkbox"/>	The top part > Credit total > The total of transaction credit amounts for the batch; the value is calculated automatically.
creditTotalInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Credit total in your default currency. This field is applicable if the amount is given in a another currency than your default.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency > The currency used for all the journal transactions in the selected batch.
debitTotal	double	Debit Total	<input type="checkbox"/>	The top part > Debit total > The total of transaction debit amounts for the batch; the value is calculated automatically.

Name	Data Type	Label	Required	Documentation
debitTotalInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Debit total in your default currency. This field is applicable if the amount is given in another currency than your default.
description	string	Description	<input type="checkbox"/>	The top part > Description > A description of the batch.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	Information collected from the system to calculate currency amount.
financialPeriod	string	Financial Period	<input type="checkbox"/>	Mandatory field: The top part Post period* > The financial period to which the transactions should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the batch has the On hold status and cannot be released or posted. You can clear the check box only if the batch has total debits equal to total credits.
id	guid	ID	<input type="checkbox"/>	The ID of the attachment
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated information.
ledger	string	Ledger	<input type="checkbox"/>	Mandatory field: The top part > Ledger* > The unique ID of the ledger to which batch transactions are posted. By default, it is the default posting ledger specified for the branch in the GL101010 window, but another posting ledger can be selected.
ledgerDescription	string	Ledger Description	<input type="checkbox"/>	Mandatory field: The top part > Ledger* > Click the magnifier > The description of the ledger to which batch transactions are posted. By default, it is the default posting ledger specified for the branch in the GL101010 window, but another posting ledger can be selected.
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
module	string	Module	<input type="checkbox"/>	The top part > Workspace > The workspace where the batch originates. New batches can be created only for General ledger.
name	string	Name	<input type="checkbox"/>	The name of the attachment.
originalBatchNumber	string		<input type="checkbox"/>	The top part > Orig. batch number > For a scheduled or auto-reversing batch, the reference number of the batch used as a template.

Name	Data Type	Label	Required	Documentation
postPeriod	string	Post Period	<input type="checkbox"/>	Mandatory field: The top part > Post period* > The financial period to which the transactions recorded in the document should be posted. Format MMYYYY.
reversingEntry	boolean		<input type="checkbox"/>	The top part > Reversing entry > A check box that indicates (if selected) that the batch is a reversing batch. The Orig.batch number field displays the ID of the batch that was reversed by this batch.
revision	int32	Revision	<input type="checkbox"/>	The version of the attachment.
skipVatAmountValidation	boolean		<input type="checkbox"/>	The top part > Skip VAT amount validation > A check box that (if selected) causes automatic validation of a VAT-related transaction that you create manually to be skipped.
status	string	Status	<input type="checkbox"/>	The top part > Status > The current status of the batch. The status defines what processing can be applied to the batch. The following options are available: On hold, Balanced, Scheduled, Unposted, Posted, Void.
transactionCode	string		<input type="checkbox"/>	
transactionCodeDescription	string		<input type="checkbox"/>	The Table part > Transaction description > A description of the transaction or any comments relevant to the transaction.
transactionDate	datetime		<input type="checkbox"/>	Mandatory field: The top part > Transaction date* > The date when the batch was created, which relates to the transaction dates of the journal entries.

59.1.3 JournalTransactionLineAttachmentsByNumberV2: Visma.net Financials Journal Transaction Line Attachments by Number

Get a specific Journal Transaction

Catalog: VismaNet

Schema: JournalTransactionV2

Label: Journal Transaction Line Attachments by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function JournalTransactionLineAttachmentsByNumberV2. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
journalTransactionNumber	string	<input checked="" type="checkbox"/>		Identifies the Journal Transaction

Columns of Table Function

59.1.4 JournalTransactionLineAttachmentsV2: Visma.net Financials Journal Transaction Line Attachments

Get a range of Journal Transactions - ScreenId=GL301000. On this particular endpoint, pagesize and totalcount denotes number of journaltransaction lines. When using pagination, the transactions for one specific batch can be split into several responses. Please use a page size lower or equal to the allowed max page size which is returned under metadata. If pagesize is greater than the max page size, it will be limited to max page size.

Catalog: VismaNet

Schema: JournalTransactionV2

Label: Journal Transaction Line Attachments

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function JournalTransactionLineAttachmentsV2. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Columns of Table Function

The columns of the table function JournalTransactionLinesByNumberV2 are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
accountNumber	string	General Ledger Account Number	<input type="checkbox"/>	Mandatory field: The table > Account* > The account (associated with the specified branch) whose balance will be updated by the journal entry.
autoReversing	boolean		<input type="checkbox"/>	The top part > Automatic reversing > A check box that indicates (if selected) that the batch is auto-reversing.
batchNumber	string	Batch Number	<input type="checkbox"/>	The top part > Batch number > The unique ID of the batch, which is generated by the numbering sequence assigned to batches in the GL102000 window .
branch_1	string		<input type="checkbox"/>	The top part > Branch > The branch to which this batch is related. This field is available if your company is set up with branches.
branch	string	Branch	<input type="checkbox"/>	The table > Branch > The branch associated with this journal entry.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
controlTotal	double	Total for Control	<input type="checkbox"/>	The top part > Control total > The control total of the batch, which is used for batch status validation.
controlTotalInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Control total in your default currency. This field is applicable if the amount is given in another currency than your default.
createVatTransaction	boolean		<input type="checkbox"/>	The top part > Create VAT transactions > A check box that indicates (if selected) that a VAT-related transaction can be created manually; select this check box when you begin to create the transaction.

Name	Data Type	Label	Required	Documentation
creditAmount	double	Credit Amount	<input type="checkbox"/>	The table > Credit amount >; The credit amount of the journal entry.
creditAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Credit amount in your default currency. This field is applicable if the amount is given in another currency than your default.
creditTotal	double		<input type="checkbox"/>	The top part > Credit total >; The total of transaction credit amounts for the batch; the value is calculated automatically.
creditTotalInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Credit total in your default currency. This field is applicable if the amount is given in a another currency than your default.
currencyId	string	Currency ID	<input type="checkbox"/>	The top part > Currency >; The currency used for all the journal transactions in the selected batch.
customerSupplier	string		<input type="checkbox"/>	The table > Customer/Supplier >; The customer or supplier associated with the entry.
debitAmount	double	Debit Amount	<input type="checkbox"/>	The table > Debit amount >; The debit amount of the journal entry.
debitAmountInCurrency	double		<input type="checkbox"/>	Background calculation giving you the debit amount in your default currency. This field is applicable if the amount is given in another currency than your default.
debitTotal	double	Debit Total	<input type="checkbox"/>	The top part > Debit total >; The total of transaction debit amounts for the batch; the value is calculated automatically.
debitTotalInCurrency	double		<input type="checkbox"/>	Background calculation giving you the Debit total in your default currency. This field is applicable if the amount is given in another currency than your default.
description_1	string		<input type="checkbox"/>	The top part > Description >; A description of the batch.
description	string	Description	<input type="checkbox"/>	The table > Description >; A detailed description provided by a user or generated by the system.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	Information collected from the system to calculate currency amount.
financialPeriod	string	Financial Period	<input type="checkbox"/>	Mandatory field: The top part Post period* >; The financial

Name	Data Type	Label	Required	Documentation
				period to which the transactions should be posted. Format YYYYMM.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that indicates (if selected) that the batch has the On hold status and cannot be released or posted. You can clear the check box only if the batch has total debits equal to total credits.
inventoryNumber	string	Inventory Number	<input type="checkbox"/>	Item ID > The item ID of the line item, if applicable.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated information.
ledger	string	Ledger	<input type="checkbox"/>	Mandatory field: The top part > Ledger* > The unique ID of the ledger to which batch transactions are posted. By default, it is the default posting ledger specified for the branch in the GL101010 window, but another posting ledger can be selected.
ledgerDescription	string	Ledger Description	<input type="checkbox"/>	Mandatory field: The top part > Ledger* > Click the magnifier > The description of the ledger to which batch transactions are posted. By default, it is the default posting ledger specified for the branch in the GL101010 window, but another posting ledger can be selected.
lineNumber	int32	Line Number	<input type="checkbox"/>	The table > Number at the left indicating the line number of the table.
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
module_1	string		<input type="checkbox"/>	The top part > Workspace > The workspace where the batch originates. New batches can be created only for General ledger.
module	string	Module	<input type="checkbox"/>	The workspace where the batch originates. See module in the Top part > Workspace
note	string	Note	<input type="checkbox"/>	
originalBatchNumber	string		<input type="checkbox"/>	The top part > Orig. batch number > For a scheduled or auto-reversing batch, the reference number of the batch used as a template.
postPeriod	string	Post Period	<input type="checkbox"/>	Mandatory field: The top part > Post period* > The financial period to which the transactions recorded in the document should be posted. Format MMYYYY.

Name	Data Type	Label	Required	Documentation
project_description	string	Project Description	<input type="checkbox"/>	Click on the magnifier. > The description.
project_id	string	Project ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
projectTask_description	string	Project Task Description	<input type="checkbox"/>	Click on the magnifier. > The description.
projectTask_id	string	Project Task ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
quantity	double	Quantity	<input type="checkbox"/>	The table > Quantity > The quantity of items associated with the transaction, if relevant.
referenceNumber	string	Reference Number	<input type="checkbox"/>	The table > Ref. no. > The reference number of the external or internal document associated with the journal transaction.
reversingEntry	boolean		<input type="checkbox"/>	The top part > Reversing entry > A check box that indicates (if selected) that the batch is a reversing batch. The Orig.batch number field displays the ID of the batch that was reversed by this batch.
skipVatAmountValidation	boolean		<input type="checkbox"/>	The top part > Skip VAT amount validation > A check box that (if selected) causes automatic validation of a VAT-related transaction that you create manually to be skipped.
status	string	Status	<input type="checkbox"/>	The top part > Status > The current status of the batch. The status defines what processing can be applied to the batch. The following options are available: On hold, Balanced, Scheduled, Unposted, Posted, Void.
subaccount_active	boolean		<input type="checkbox"/>	Active > The status of the identifier.
subaccount_description	string	Subaccount Description	<input type="checkbox"/>	Description > The description of the identifier.
subaccount_errorInfo	string	Sub Account Error Message	<input type="checkbox"/>	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	<input type="checkbox"/>	System generated information.
subaccount_metadata_maxPageSize	int64		<input type="checkbox"/>	
subaccount_metadata_totalCount	int64		<input type="checkbox"/>	
subaccount_subaccountId	int32	Sub Account ID	<input type="checkbox"/>	SubID > The identifier of the subaccount.
subaccount_subaccountNumber	string	Sub Account Number	<input type="checkbox"/>	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
transactionCode	string		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
transactionCodeDescription	string		<input type="checkbox"/>	The Table part > Transaction description > A description of the transaction or any comments relevant to the transaction.

59.1.6 JournalTransactionLinesByPeriodOrDateV2: Visma.net Financials Journal Transaction Line Attachments by Period or Date

Get a range of Journal Transactions - ScreenId=GL301000. On this particular endpoint, pagesize and totalcount denotes number of journaltransaction lines. When using pagination, the transactions for one specific batch can be split into several responses. Please use a page size lower or equal to the allowed max page size which is returned under metadata. If pagesize is greater than the max page size, it will be limited to max page size.

59.1.8 JournalTransactionsByPeriodOrDateV2: Visma.net Financials Journal Transaction Line Subaccount Segments by Period or Date

Get a range of Journal Transactions - ScreenId=GL301000. On this particular endpoint, pagesize and totalcount denotes number of journaltransaction lines. When using pagination, the transactions for one specific batch can be split into several responses. Please use a page size lower or equal to the allowed max page size which is returned under metadata. If pagesize is greater than the max page size, it will be limited to max page size.

Catalog: VismaNet

Schema: JournalTransactionV2

Label: Journal Transaction Line Subaccount Segments by Period or Date

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function JournalTransactionsByPeriodOrDateV2. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch	string	<input type="checkbox"/>		Branch to query data for.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint

Name	Data Type	Required	Default Value	Documentation
				itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandAttachments	boolean	<input type="checkbox"/>		If true there will be included all attachments regarding batch. Default on false
lastModifiedDateTime	string	<input type="checkbox"/>		When setting this parameter there will be exported only the batches changed or created since the provided date and time. Mandatory if 'PeriodId' is not provided. Format: yyyy-MM-dd HH:mm:ss
module	string	<input type="checkbox"/>		Module to query data for. Allowed values: GL, AP, AR, CM, CA, IN, DR, FA, PM
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.

60.1.6 KitAssemblyNonStockComponentLinesByTypeRefNumber: Visma.net Financials Kit-assembly Non-stock Component Lines by Type Reference Number

Get a Kit Assembly - ScreenId = IN307000

Catalog: VismaNet

Schema: KitAssembly

Label: Kit-assembly Non-stock Component Lines by Type Reference Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function KitAssemblyNonStockComponentLinesByTypeRefNumber. A value must be provided at all

times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

61.1.1 KitSpecificationNonStockComponentLines: Visma.net Financials Kit-specification Non-stock Component Lines

Get a range of Kit Specifications - ScreenId = IN209500

Catalog: VismaNet

Schema: KitSpecifications

Label: Kit-specification Non-stock Component Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function KitSpecificationNonStockComponentLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

61.1.8 KitSpecifications: Visma.net Financials Kit Specifications

Get a range of Kit Specifications - ScreenId = IN209500

Catalog: VismaNet

Schema: KitSpecifications

Label: Kit Specifications

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariant SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function KitSpecifications. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

63.1.3 LocationsByBAccountId: Visma.net Financials Locations by Bank Account ID

Get a range of Locations for a BAccountRequest page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page sizeData for the Locations

Catalog: VismaNet

Schema: Location

Label: Locations by Bank Account ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function LocationsByBAccountId. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

65 Schema: Multilanguage

65.1 Tables

65.1.1 MultilanguageActiveLanguages: Visma.net Financials Multi-language Active Languages

Get all languages (screenId:SM200550)

Catalog: VismaNet

Schema: Multilanguage

Label: Multi-language Active Languages

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter

case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function MultilanguageActiveLanguages. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function MultilanguageActiveLanguages are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
isActive	boolean	Is Active	<input type="checkbox"/>	
isDefault	boolean	Is Default	<input type="checkbox"/>

69.1.4 OrganizationByOrganizationCdByorganizationNumber: Visma.net Financials Organization by Organization Code Organization Number

Get organisation information by organization number.

Catalog: VismaNet

Schema: Organization

Label: Organization by Organization Code Organization Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function OrganizationByOrganizationCdByorganizationNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

71.1.5 PaymentOrdersToApplyByNumber: Visma.net Financials Payment Orders to Apply by Number

Get a specific PaymentPayment is deprecated, please use CustomerPayment instead.

Catalog: VismaNet

Schema: Payment

Label: Payment Orders to Apply by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PaymentOrdersToApplyByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
paymentNumber	string	<input checked="" type="checkbox"/>		Identifies the Payment

Columns of Table Function

The columns of the table function PaymentOrdersToApplyByNumber are shown below. Each column has an SQL data type.

description_1	string		<input type="checkbox"/>	Mandatory field: The top part > Description* > A description of the payment method.

Name	Data Type	Label	Required	Documentation
description	string	Description	<input type="checkbox"/>	Table column > Description > The name for the payment method element.
detailID	string	Detail ID	<input type="checkbox"/>	Mandatory field: Table column > ID* > The identifier of the payment method element.
meansOfPayment	string		<input type="checkbox"/>	The top part > Means of payment > One of the system's built-in payment templates. The following options are available: Credit card, Cash, Direct deposit.
paymentMethodID	string	Payment Method ID	<input type="checkbox"/>	Mandatory field: The top part > Payment method ID* > The unique identifier of the payment method.
useInAP	boolean		<input type="checkbox"/>	The top part > Use for supplier > A check box that indicates whether the payment method will be used in Supplier ledger.

72.1.4 PaymentMethods: Visma.net Financials Payment Methods

Get a range of Payment Method - ScreenId=CA204000

Catalog: VismaNet

Schema: PaymentMethod

Label: Payment Methods

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PaymentMethods. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		
lastModifiedDateTime	string	<input type="checkbox"/>		
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		
numberToRead	int32	<input type="checkbox"/>		
skipRecords	int32	<input type="checkbox"/>

Catalog: VismaNet

Schema: Project

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function Project_TasksEmployeesWorkGroupDescription. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Columns of Table Function

The columns of the table function `Project_TasksEmployeesWorkGroupDescription` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
address_addressId	int32	Address ID	<input type="checkbox"/>	
address_addressLine1	string	Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.
address_addressLine2	string	Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
address_addressLine3	string	Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
address_city	string	City	<input type="checkbox"/>	City > The city.
address_country_errorInfo	string		<input type="checkbox"/>	
address_country_id	string	Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
address_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
address_country_metadata_totalCount	int64		<input type="checkbox"/>	
address_country_name	string	Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
address_county_id	string	County ID	<input type="checkbox"/>	Click the magnifier > The identifier
address_county_name	string	County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
address_postalCode	string	Postal Code	<input type="checkbox"/>	Postcode > The postcode.
allocationRule_active	boolean		<input type="checkbox"/>	
allocationRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
allocationRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.

Name	Data Type	Label	Required	Documentation
assets	double	Assets	<input type="checkbox"/>	The top part > Assest > The actual assets for the project.
autoAllocate	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Run allocation w hen you release project transactions > A check box that indicates (if selected) that allocation is run automatically during the release of the documents associated w ith this project.
automaticReleaseAr	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Automatically release customer documents > A check box that indicates (if selected) that invoice documents are released automatically after the project invoicing is completed.
billingPeriod	string	Billing Period	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Invoicing period > The frequency of invoicing, w hich can be one of the follow ing options: Week, Month, Quarter, Year, On demand.
billingRule_active	boolean		<input type="checkbox"/>	
billingRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
billingRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
branch_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branch_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
calendarID	string		<input type="checkbox"/>	
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_attention	string		<input type="checkbox"/>	Attention > The attention line as it is used in your customer's/supplier's/company's business letters. The intention of this line is to direct the letter to the right person if the letter is not addressed to any specific person.
contact_contactId	int32	Contact ID	<input type="checkbox"/>	
contact_email	string	Contact Email	<input type="checkbox"/>	Email > The email address of the customer/supplier/company as a business entity.
contact_employeeContact	string		<input type="checkbox"/>	Employee contact > The link to the contact record associated w ith the employee.
contact_fax	string	Contact Fax	<input type="checkbox"/>	Fax > The fax number.

Name	Data Type	Label	Required	Documentation
contact_firstName	string	Contact First Name	<input type="checkbox"/>	First name > The first name of the employee.
contact_lastName	string	Contact Last Name	<input type="checkbox"/>	Mandatory field: Last name* > The last name of the employee.
contact_midName	string	Contact Middle Name	<input type="checkbox"/>	Middle name > The middle name of the employee.
contact_name	string	Contact Name	<input type="checkbox"/>	Name > The legal name of to appear on the documents.
contact_phone1	string	Contact Phone 1	<input type="checkbox"/>	Phone 1 > The default phone number.
contact_phone2	string	Contact Phone 2	<input type="checkbox"/>	Phone 2 > An additional phone number.
contact_phone3	string	Contact Phone 3	<input type="checkbox"/>	Phone 3 > An additional phone number of the employee.
contact_title	string	Contact Title	<input type="checkbox"/>	Title > The courtesy title to be used for the employee.
contact_w eb	string	Contact Website	<input type="checkbox"/>	Web > The website of the company, if one exists.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier . > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerLocation_id	int32		<input type="checkbox"/>	Click the magnifier > The identifier
customerLocation_name	string		<input type="checkbox"/>	Click the magnifier > The displayed name
defAccount_description	string		<input type="checkbox"/>	Name of item/description
defAccount_number	string		<input type="checkbox"/>	Number of item
defAccount_type	string		<input type="checkbox"/>	
defAccrualAccount_description	string		<input type="checkbox"/>	Name of item/description
defAccrualAccount_number	string		<input type="checkbox"/>	Number of item
defAccrualAccount_type	string		<input type="checkbox"/>	
defAccrualSub_description	string		<input type="checkbox"/>	Click on the magnifier . > The description.
defAccrualSub_id	string		<input type="checkbox"/>	Click on the magnifier . > The identifier.
defSub_description	string		<input type="checkbox"/>	Click on the magnifier . > The description.
defSub_id	string		<input type="checkbox"/>	Click on the magnifier . > The identifier.
department	string	Department	<input type="checkbox"/>	Mandatory field: General information tab > Employee section > Department* > The department the employee works for.
description_1	string		<input type="checkbox"/>	Mandatory field: The top part > Description* > The description of the project.
description	string	Description	<input type="checkbox"/>	Mandatory field: Description > The description of the task.

Name	Data Type	Label	Required	Documentation
employeeClass_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
employeeClass_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
employeeId	int32	Employee ID	<input type="checkbox"/>	Mandatory field: The top part > Employee ID* > The unique identifier, which is assigned to the employee in accordance with the configuration of the EMPLOYEE segmented key.
employeeLogin	string		<input type="checkbox"/>	
employeeName	string	Employee Name	<input type="checkbox"/>	The top part > Employee name > The name of this employee.
employeeNumber	string	Employee Number	<input type="checkbox"/>	General information tab > Employee settings section > Employee ref. no. > A reference number for the employee.
employeeUserId	guid		<input type="checkbox"/>	Employee internal user ID. This is the ID of the user linked to the employee
endDate	datetime	End Date	<input type="checkbox"/>	Summary tab > Project properties section > End date > The date when the project is expected to end.
errorInfo_1	string		<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
expenses	double	Expenses	<input type="checkbox"/>	The top part > Expenses > The total of the current expenses incurred by the project.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that you select to indicate that the project should have the In planning status.
income	double	Income	<input type="checkbox"/>	The top part > Income > The income expected from the project.
internalID	int32	Internal ID	<input type="checkbox"/>	
lastBillingDate	datetime	Last Billing Date	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Last invoicing date > The date when the latest invoicing was performed for the project.
lastModifiedDateTime_1	datetime		<input type="checkbox"/>	System generated information
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	
liability	double	Liability	<input type="checkbox"/>	The top part > Liabilities > The actual liabilities for the project.
metadata_maxPageSize_1	int64		<input type="checkbox"/>	
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount_1	int64		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
nextBillingDate	datetime	Next Billing Date	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Next invoicing date > The date for which the next invoicing is scheduled for the project.
plannedEnd	datetime		<input type="checkbox"/>	
plannedStart	datetime		<input type="checkbox"/>	
projectID	string	Project ID	<input type="checkbox"/>	Mandatory field: The top part > Project ID* > The unique ID for the project.
projectManager_address_addressId	int32		<input type="checkbox"/>	
projectManager_address_addressLine1	string		<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.
projectManager_address_addressLine2	string		<input type="checkbox"/>	Address 2 > The second line of the address.
projectManager_address_addressLine3	string		<input type="checkbox"/>	Address 3 > The third line of the address.
projectManager_address_city	string		<input type="checkbox"/>	City > The city.
projectManager_address_country_errorInfo	string		<input type="checkbox"/>	
projectManager_address_country_id	string		<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
projectManager_address_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
projectManager_address_country_metadata_totalCount	int64		<input type="checkbox"/>	
projectManager_address_country_name	string		<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
projectManager_address_county_id	string		<input type="checkbox"/>	Click the magnifier > The identifier
projectManager_address_county_name	string		<input type="checkbox"/>	Click the magnifier > The displayed name
projectManager_address_postalCode	string		<input type="checkbox"/>	Postcode > The postcode.
projectManager_branch_name	string		<input type="checkbox"/>	Click the magnifier. > The name.
projectManager_branch_number	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
projectManager_calendarID	string		<input type="checkbox"/>	
projectManager_contact_attention	string		<input type="checkbox"/>	Attention > The attention line as it is used in your customer's/supplier's/company's business letters. The intention of this line is to direct the letter to the right person if the letter is not

Name	Data Type	Label	Required	Documentation
				addressed to any specific person.
projectManager_contact_contactId	int32		<input type="checkbox"/>	
projectManager_contact_email	string		<input type="checkbox"/>	Email > The email address of the customer/supplier/company as a business entity.
projectManager_contact_employeeContact	string		<input type="checkbox"/>	Employee contact > The link to the contact record associated with the employee.
projectManager_contact_fax	string		<input type="checkbox"/>	Fax > The fax number.
projectManager_contact_firstName	string		<input type="checkbox"/>	First name > The first name of the employee.
projectManager_contact_lastName	string		<input type="checkbox"/>	Mandatory field: Last name* > The last name of the employee.
projectManager_contact_midName	string		<input type="checkbox"/>	Middle name > The middle name of the employee.
projectManager_contact_name	string		<input type="checkbox"/>	Name > The legal name of to appear on the documents.
projectManager_contact_phone1	string		<input type="checkbox"/>	Phone 1 > The default phone number.
projectManager_contact_phone2	string		<input type="checkbox"/>	Phone 2 > An additional phone number.
projectManager_contact_phone3	string		<input type="checkbox"/>	Phone 3 > An additional phone number of the employee.
projectManager_contact_title	string		<input type="checkbox"/>	Title > The courtesy title to be used for the employee.
projectManager_contact_w eb	string		<input type="checkbox"/>	Web > The website of the company, if one exists.
projectManager_department	string	Project Manager Department	<input type="checkbox"/>	Mandatory field: General information tab > Employee section > Department* > The department the employee works for.
projectManager_employeeClass_d escription	string		<input type="checkbox"/>	Click on the magnifier. > The description.
projectManager_employeeClass_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
projectManager_employeeId	int32	Project Manager Employee ID	<input type="checkbox"/>	Mandatory field: The top part > Employee ID* > The unique identifier, which is assigned to the employee in accordance with the configuration of the EMPLOYEE segmented key.
projectManager_employeeLogin	string		<input type="checkbox"/>	
projectManager_employeeName	string	Project Manager Employee Name	<input type="checkbox"/>	The top part > Employee name > The name of this employee.
projectManager_employeeNumber	string	Project Manager Employee Number	<input type="checkbox"/>	General information tab > Employee settings section > Employee ref. no. > A reference number for the employee.

Name	Data Type	Label	Required	Documentation
projectManager_employeeUserId	guid		<input type="checkbox"/>	Employee internal user ID. This is the ID of the user linked to the employee
projectManager_errorInfo	string		<input type="checkbox"/>	
projectManager_lastModifiedDateTime	datetime		<input type="checkbox"/>	
projectManager_metadata_maxPageSize	int64		<input type="checkbox"/>	
projectManager_metadata_totalCount	int64		<input type="checkbox"/>	
projectManager_status	string	Project Manager Status	<input type="checkbox"/>	Mandatory field: The top part > Status > The status of the employee. The following options are available: Active, On hold, Hold payments, Inactive, One-time.
publicId	guid	Public ID	<input type="checkbox"/>	
rateTable_description_1	string		<input type="checkbox"/>	Click on the magnifier. > The description.
rateTable_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
rateTable_id_1	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
rateTable_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
restrictEmployees_1	boolean		<input type="checkbox"/>	Summary tab > Project properties section > Restrict employees > A check box that indicates (if selected) that only the employees listed on the Employees tab of this window can create activities and documents associated with the current project.
restrictEmployees	boolean	Restrict Employees	<input type="checkbox"/>	Summary tab > Task properties section > Restrict employees > A check box that indicates (if selected) that only the employees listed on the Employees tab of this window can create activities and documents associated with the current task.
restrictEquipment	boolean	Restrict Equipment	<input type="checkbox"/>	
startDate_1	datetime		<input type="checkbox"/>	Mandatory field: Summary tab > Project properties section > Start date* > The date when the project starts.
startDate	datetime	Start Date	<input type="checkbox"/>	Start date > The date when the task was actually started.
status_1	string		<input type="checkbox"/>	Mandatory field: Status* > The status of the task, which can be one of the following: In planning, Active, Cancelled, Completed.

Name	Data Type	Label	Required	Documentation
status_2	string		<input type="checkbox"/>	The top part > Status > The status of the project, w hich can be one of the follow ing options: In planning, Active, Completed, Suspended, Cancelled.
status	string	Status	<input type="checkbox"/>	Mandatory field: The top part > Status > The status of the employee. The follow ing options are available: Active, On hold, Hold payments, Inactive, One-time.
systemTemplate	boolean		<input type="checkbox"/>	
taskId	string	Task ID	<input type="checkbox"/>	Mandatory field: > Task ID* > The ID of the task.
template_description	string		<input type="checkbox"/>	Name of item/description
template_number	string	Template Number	<input type="checkbox"/>	Number of item
template_status	string	Template Status	<input type="checkbox"/>	
TEXT	string		<input type="checkbox"/>	
visibility_visibleInAp_1	boolean		<input type="checkbox"/>	Supplier ledger
visibility_visibleInAp	boolean		<input type="checkbox"/>	Supplier ledger
visibility_visibleInAr_1	boolean		<input type="checkbox"/>	Customer ledger
visibility_visibleInAr	boolean		<input type="checkbox"/>	Customer ledger
visibility_visibleInCa_1	boolean		<input type="checkbox"/>	Cash management
visibility_visibleInCa	boolean		<input type="checkbox"/>	Cash management
visibility_visibleInCr_1	boolean		<input type="checkbox"/>	
visibility_visibleInCr	boolean		<input type="checkbox"/>	
visibility_visibleInEa_1	boolean		<input type="checkbox"/>	Expenses
visibility_visibleInEa	boolean		<input type="checkbox"/>	Expenses
visibility_visibleInGl_1	boolean		<input type="checkbox"/>	General ledger
visibility_visibleInGl	boolean		<input type="checkbox"/>	General ledger
visibility_visibleInIn_1	boolean		<input type="checkbox"/>	Inventory
visibility_visibleInIn	boolean		<input type="checkbox"/>	Inventory
visibility_visibleInPo_1	boolean		<input type="checkbox"/>	Purchases
visibility_visibleInPo	boolean		<input type="checkbox"/>	Purchases
visibility_visibleInSo_1	boolean		<input type="checkbox"/>	Sales
visibility_visibleInSo	boolean		<input type="checkbox"/>	Sales
visibility_visibleInTa_1	boolean		<input type="checkbox"/>	Time entries
visibility_visibleInTa	boolean		<input type="checkbox"/>	Time entries

73.1.3 ProjectAttributes: Visma.net Financials Project Attributes

Get a range of Projects - ScreenId=PM301000If AccModules_MaxPagination Feature Toggle is ON then request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page size

Catalog: VismaNet

Schema: Project

Label: Project Attributes

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectAttributes. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
attributes	string	<input type="checkbox"/>		Identifies the attributes
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandAttribute	boolean	<input type="checkbox"/>		Expands project attributes
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.

Name	Data Type	Required	Default Value	Documentation
nonProject	boolean	<input type="checkbox"/>		Set to true to return the non-project.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
publicId	guid	<input type="checkbox"/>		Identifies the Project by its publicId
restrictedEmployee	string	<input type="checkbox"/>		ID of the employee where access restrictions apply
restrictedUser	int64	<input type="checkbox"/>		Id of the odp user where access restrictions apply
startDate	datetime	<input type="checkbox"/>		Project's start date
status	string	<input type="checkbox"/>		Use drop down and select Status. (Waarden: Planned, Active, Completed, Cancelled, OnHold, PendingApproval)
systemTemplate	boolean	<input type="checkbox"/>		If the project is a template
taskStatus	string	<input type="checkbox"/>		Use drop down and select Status. (Waarden: Planned, Active, Cancelled, Canceled, Completed)
taskVisibleInAp	boolean	<input type="checkbox"/>		If the project task is visible in the Supplier ledger
taskVisibleInAr	boolean	<input type="checkbox"/>		If the project task is visible in the Customer ledger
taskVisibleInCa	boolean	<input type="checkbox"/>		If the project task is visible in the Cash management workspace
taskVisibleInCr	boolean	<input type="checkbox"/>		If the project task is visible in the CRM workspace
taskVisibleInEa	boolean	<input type="checkbox"/>		If the project task is visible in the Expense workspace
taskVisibleInGl	boolean	<input type="checkbox"/>		If the project task is visible in the General ledger workspace
taskVisibleInIn	boolean	<input type="checkbox"/>		If the project task is visible in the Inventory workspace
taskVisibleInPo	boolean	<input type="checkbox"/>		If the project task is visible in the Purchases workspace
taskVisibleInSo	boolean	<input type="checkbox"/>		If the project task is visible in the Sales workspace
taskVisibleInTa	boolean	<input type="checkbox"/>		If the project task is visible in the Time entities workspace
visibleInAP	boolean	<input type="checkbox"/>		If the project is visible in AP

Columns of Table Function

The columns of the table function ProjectAttributes are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
allocationRule_active	boolean		<input type="checkbox"/>	
allocationRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
allocationRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
assets	double	Assets	<input type="checkbox"/>	The top part > Assesst > The actual assets for the project.
autoAllocate	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Run allocation w hen you release project transactions > A check box that indicates (if selected) that allocation is run automatically during the release of the documents associated w ith this project.
automaticReleaseAr	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Automatically release customer documents > A check box that indicates (if selected) that invoice documents are released automatically after the project invoicing is completed.
billingPeriod	string	Billing Period	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Invoicing period > The frequency of invoicing, w hich can be one of the follow ing options: Week, Month, Quarter, Year, On demand.
billingRule_active	boolean		<input type="checkbox"/>	
billingRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
billingRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerLocation_id	int32		<input type="checkbox"/>	Click the magnifier > The identifier
customerLocation_name	string		<input type="checkbox"/>	Click the magnifier > The displayed name
defAccount_description	string		<input type="checkbox"/>	Name of item/description
defAccount_number	string		<input type="checkbox"/>	Number of item

Name	Data Type	Label	Required	Documentation
defAccount_type	string		<input type="checkbox"/>	
defAccrualAccount_description	string		<input type="checkbox"/>	Name of item/description
defAccrualAccount_number	string		<input type="checkbox"/>	Number of item
defAccrualAccount_type	string		<input type="checkbox"/>	
defAccrualSub_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
defAccrualSub_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
defSub_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
defSub_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
description_1	string		<input type="checkbox"/>	Mandatory field: The top part > Description* > The description of the project.
description	string	Description	<input type="checkbox"/>	Attribute > The description of the attribute.
endDate	datetime	End Date	<input type="checkbox"/>	Summary tab > Project properties section > End date > The date w hen the project is expected to end.
errorInfo	string	Error Message	<input type="checkbox"/>	
expenses	double	Expenses	<input type="checkbox"/>	The top part > Expenses > The total of the current expenses incurred by the project.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that you select to indicate that the project should have the In planning status.
id	string	ID	<input type="checkbox"/>	
income	double	Income	<input type="checkbox"/>	The top part > Income > The income expected from the project.
internalID	int32	Internal ID	<input type="checkbox"/>	
lastBillingDate	datetime	Last Billing Date	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Last invoicing date > The date w hen the latest invoicing w as performed for the project.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated information
liability	double	Liability	<input type="checkbox"/>	The top part > Liabilities > The actual liabilities for the project.
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
nextBillingDate	datetime	Next Billing Date	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Next invoicing date > The date for w hich the next invoicing is scheduled for the project.

Name	Data Type	Label	Required	Documentation
projectID	string	Project ID	<input type="checkbox"/>	Mandatory field: The top part & Project ID* & The unique ID for the project.
projectManager_address_addressId	int32		<input type="checkbox"/>	
projectManager_address_addressLine1	string		<input type="checkbox"/>	Address 1 & The first line of the customer's/supplier's/company's/employee's contact address.
projectManager_address_addressLine2	string		<input type="checkbox"/>	Address 2 & The second line of the address.
projectManager_address_addressLine3	string		<input type="checkbox"/>	Address 3 & The third line of the address.
projectManager_address_city	string		<input type="checkbox"/>	City & The city.
projectManager_address_country_errorInfo	string		<input type="checkbox"/>	
projectManager_address_country_id	string		<input type="checkbox"/>	Mandatory field: Country ID* & The unique two-letter country ID according to international standard ISO 3166.
projectManager_address_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
projectManager_address_country_metadata_totalCount	int64		<input type="checkbox"/>	
projectManager_address_country_name	string		<input type="checkbox"/>	Mandatory field: Country name* & The complete name of the country.
projectManager_address_county_id	string		<input type="checkbox"/>	Click the magnifier & The identifier
projectManager_address_county_name	string		<input type="checkbox"/>	Click the magnifier & The displayed name
projectManager_address_postalCode	string		<input type="checkbox"/>	Postcode & The postcode.
projectManager_branch_name	string		<input type="checkbox"/>	Click the magnifier. & The name.
projectManager_branch_number	string		<input type="checkbox"/>	Click the magnifier. & The identifier.
projectManager_calendarID	string		<input type="checkbox"/>	
projectManager_contact_attention	string		<input type="checkbox"/>	Attention & The attention line as it is used in your customer's/supplier's/company's business letters. The intention of this line is to direct the letter to the right person if the letter is not addressed to any specific person.
projectManager_contact_contactId	int32		<input type="checkbox"/>	
projectManager_contact_email	string		<input type="checkbox"/>	Email & The email address of the customer/supplier/company as a business entity.
projectManager_contact_employeeContact	string		<input type="checkbox"/>	Employee contact & The link to the contact record associated

Name	Data Type	Label	Required	Documentation
				w ith the employee.
projectManager_contact_fax	string		<input type="checkbox"/>	Fax > The fax number.
projectManager_contact_firstName	string		<input type="checkbox"/>	First name > The first name of the employee.
projectManager_contact_lastName	string		<input type="checkbox"/>	Mandatory field: Last name* > The last name of the employee.
projectManager_contact_midName	string		<input type="checkbox"/>	Middle name > The middle name of the employee.
projectManager_contact_name	string		<input type="checkbox"/>	Name > The legal name of to appear on the documents.
projectManager_contact_phone1	string		<input type="checkbox"/>	Phone 1 > The default phone number.

73.1.4 ProjectAttributesByProjectID: Visma.net Financials Project Attributes by Project ID

Get a specific Project

Catalog: VismaNet

Schema: Project

Label: Project Attributes by Project ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariant SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectAttributesByProjectID. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
projectID	string	<input checked="" type="checkbox"/>		Identifies the Project

Columns of Table Function

The columns of the table function ProjectAttributesByProjectID are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
allocationRule_active	boolean		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
allocationRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
allocationRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
assets	double	Assets	<input type="checkbox"/>	The top part > Assesst > The actual assets for the project.
autoAllocate	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Run allocation w hen you release project transactions > A check box that indicates (if selected) that allocation is run automatically during the release of the documents associated w ith this project.
automaticReleaseAr	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Automatically release customer documents > A check box that indicates (if selected) that invoice documents are released automatically after the project invoicing is completed.
billingPeriod	string	Billing Period	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Invoicing period > The frequency of invoicing, w hich can be one of the follow ing options: Week, Month, Quarter, Year, On demand.
billingRule_active	boolean		<input type="checkbox"/>	
billingRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.

73.1.6 ProjectByinternalID

Get a specific Project by internal ID

Catalog: VismaNet

Schema: Project

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectByinternalID. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
internalID	int32	<input checked="" type="checkbox"/>		Identifies the Project

Columns of Table Function

The columns of the table function ProjectByinternalID are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation

73.1.9 ProjectByinternalID_EmployeesWorkGroupDescription

Get a specific Project by internal ID

Catalog: VismaNet

Schema: Project

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectByinternalID_EmployeesWorkGroupDescription. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
internalID	int32	<input checked="" type="checkbox"/>		Identifies the Project

Columns of Table Function

The columns of the table function ProjectByinternalID_EmployeesWorkGroupDescription are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
address_addressId	int32	Address ID	<input type="checkbox"/>	
address_addressLine1	string	Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.
address_addressLine2	string	Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
address_addressLine3	string	Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
address_city	string	City	<input type="checkbox"/>	City > The city.
address_country_errorInfo	string		<input type="checkbox"/>	
address_country_id	string	Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
address_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
address_country_metadata_totalCount	int64		<input type="checkbox"/>	
address_country_name	string	Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
address_county_id	string	County ID	<input type="checkbox"/>	Click the magnifier > The identifier
address_county_name	string	County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
address_postalCode	string	Postal Code	<input type="checkbox"/>	Postcode > The postcode.
allocationRule_active	boolean		<input type="checkbox"/>	
allocationRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
allocationRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
assets	double	Assets	<input type="checkbox"/>	The top part > Asset > The actual assets for the project.
autoAllocate	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Run allocation when you release project transactions > A check box that indicates (if selected) that allocation is run automatically during the release of the documents associated with this project.
automaticReleaseAr	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Automatically release customer documents > A check box that indicates (if selected) that

Name	Data Type	Label	Required	Documentation
				invoice documents are released automatically after the project invoicing is completed.
billingPeriod	string	Billing Period	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Invoicing period > The frequency of invoicing, which can be one of the following options: Week, Month, Quarter, Year, On demand.

73.1.10 ProjectByinternalID_Tasks

Get a specific Project by internal ID

Catalog: VismaNet

Schema: Project

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectByinternalID_Tasks. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
internalID	int32	<input checked="" type="checkbox"/>		Identifies the Project

Columns of Table Function

The columns of the table function ProjectByinternalID_Tasks are shown below. Each column has an SQL data type.

73.1.12 ProjectByinternalID_TasksEmployeesWorkGroupDescription

Get a specific Project by internal ID

Catalog: VismaNet

Schema: Project

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectByinternalID_TasksEmployeesWorkGroupDescription. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
internalID	int32	<input checked="" type="checkbox"/>		Identifies the Project

Columns of Table Function

The columns of the table function ProjectByinternalID_TasksEmployeesWorkGroupDescription are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
address_addressId	int32	Address ID	<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
address_addressLine1	string	Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.
address_addressLine2	string	Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
address_addressLine3	string	Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
address_city	string	City	<input type="checkbox"/>	City > The city.
address_country_errorInfo	string		<input type="checkbox"/>	
address_country_id	string	Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
address_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
address_country_metadata_totalCount	int64		<input type="checkbox"/>	
address_country_name	string	Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
address_county_id	string	County ID	<input type="checkbox"/>	Click the magnifier > The identifier
address_county_name	string	County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
address_postalCode	string	Postal Code	<input type="checkbox"/>	Postcode > The postcode.
allocationRule_active	boolean		<input type="checkbox"/>	
allocationRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
allocationRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
assets	double	Assets	<input type="checkbox"/>	The top part > Asset > The actual assets for the project.
autoAllocate	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Run allocation when you release project transactions > A check box that indicates (if selected) that allocation is run automatically during the release of the documents associated with this project.
automaticReleaseAr	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Automatically release customer documents > A check box that indicates (if selected) that invoice documents are released automatically after the project invoicing is completed.
billingPeriod	string	Billing Period	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Invoicing period > The

73.1.14 ProjectByprojectId_TasksEmployeesWorkGroupDescription

Get a specific Project

Catalog: VismaNet

Schema: Project

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectByprojectId_TasksEmployeesWorkGroupDescription. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When

Name	Data Type	Required	Default Value	Documentation
				the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
projectID	string	<input checked="" type="checkbox"/>		Identifies the Project

Columns of Table Function

The columns of the table function ProjectByprojectID_TasksEmployeesWorkGroupDescription are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
address_addressId	int32	Address ID	<input type="checkbox"/>	
address_addressLine1	string	Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.
address_addressLine2	string	Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
address_addressLine3	string	Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
address_city	string	City	<input type="checkbox"/>	City > The city.
address_country_errorInfo	string		<input type="checkbox"/>	
address_country_id	string	Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
address_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
address_country_metadata_totalCount	int64		<input type="checkbox"/>	
address_country_name	string	Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
address_county_id	string	County ID	<input type="checkbox"/>	Click the magnifier > The identifier
address_county_name	string	County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
address_postalCode	string	Postal Code	<input type="checkbox"/>	Postcode > The postcode.
allocationRule_active	boolean		<input type="checkbox"/>	
allocationRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
allocationRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.

Name	Data Type	Label	Required	Documentation
assets	double	Assets	<input type="checkbox"/>	The top part > Assest > The actual assets for the project.

73.1.15 ProjectEmployees: Visma.net Financials Project Employees

Get a range of Projects - ScreenId=PM301000If AccModules_MaxPagination Feature Toggle is ON then request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page size

Catalog: VismaNet

Schema: Project

Label: Project Employees

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectEmployees. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
attributes	string	<input type="checkbox"/>		Identifies the attributes
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandAttribute	boolean	<input type="checkbox"/>		Expands project attributes
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.

Name	Data Type	Required	Default Value	Documentation
nonProject	boolean	<input type="checkbox"/>		Set to true to return the non-project.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
publicId	guid	<input type="checkbox"/>		Identifies the Project by its publicId
restrictedEmployee	string	<input type="checkbox"/>		ID of the employee where access restrictions apply
restrictedUser	int64	<input type="checkbox"/>		Id of the odp user where access restrictions apply
startDate	datetime	<input type="checkbox"/>		Project's start date
status	string	<input type="checkbox"/>		Use drop down and select Status. (Waarden: Planned, Active, Completed, Cancelled, OnHold, PendingApproval)
systemTemplate	boolean	<input type="checkbox"/>		If the project is a template
taskStatus	string	<input type="checkbox"/>		Use drop down and select Status. (Waarden: Planned, Active, Cancelled, Canceled, Completed)
taskVisibleInAp	boolean	<input type="checkbox"/>		If the project task is visible in the Supplier ledger
taskVisibleInAr	boolean	<input type="checkbox"/>		If the project task is visible in the Customer ledger
taskVisibleInCa	boolean	<input type="checkbox"/>		If the project task is visible in the Cash management workspace
taskVisibleInCr	boolean	<input type="checkbox"/>		If the project task is visible in the CRM workspace
taskVisibleInEa	boolean	<input type="checkbox"/>		If the project task is visible in the Expense workspace
taskVisibleInGl	boolean	<input type="checkbox"/>		If the project task is visible in the General ledger workspace
taskVisibleInIn	boolean	<input type="checkbox"/>		If the project task is visible in the Inventory workspace
taskVisibleInPo	boolean	<input type="checkbox"/>		If the project task is visible in the Purchases workspace
taskVisibleInSo	boolean	<input type="checkbox"/>		If the project task is visible in the Sales workspace

73.1.17 Projects: Visma.net Financials Projects

Get a range of Projects - ScreenId=PM301000If AccModules_MaxPagination Feature Toggle is ON then request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page size

Catalog: VismaNet

Schema: Project

Label: Projects

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter

case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function Projects. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
attributes	string	<input type="checkbox"/>		Identifies the attributes
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandAttribute	boolean	<input type="checkbox"/>		Expands project attributes
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
nonProject	boolean	<input type="checkbox"/>		Set to true to return the non-project.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata

Name	Data Type	Required	Default Value	Documentation
				information. If requested page size is greater than allowed max page size, request will be limited to max page size.
publicId	guid	<input type="checkbox"/>		Identifies the Project by its publicId
restrictedEmployee	string	<input type="checkbox"/>		ID of the employee where access restrictions apply
restrictedUser	int64	<input type="checkbox"/>		Id of the odp user where access restrictions apply
startDate	datetime	<input type="checkbox"/>		Project's start date
status	string	<input type="checkbox"/>		Use drop down and select Status. (Waarden: Planned, Active, Completed, Cancelled, OnHold, PendingApproval)
systemTemplate	boolean	<input type="checkbox"/>		If the project is a template
taskStatus	string	<input type="checkbox"/>		Use drop down and select Status. (Waarden: Planned, Active, Cancelled, Canceled, Completed)
taskVisibleInAp	boolean	<input type="checkbox"/>		If the project task is visible in the Supplier ledger
taskVisibleInAr	boolean	<input type="checkbox"/>		If the project task is visible in the Customer ledger
taskVisibleInCa	boolean	<input type="checkbox"/>		If the project task is visible in the Cash management workspace
taskVisibleInCr	boolean	<input type="checkbox"/>		If the project task is visible in the CRM workspace
taskVisibleInEa	boolean	<input type="checkbox"/>		If the project task is visible in the Expense workspace
taskVisibleInGl	boolean	<input type="checkbox"/>		If the project task is visible in the General ledger workspace
taskVisibleInIn	boolean	<input type="checkbox"/>		If the project task is visible in the Inventory workspace
taskVisibleInPo	boolean	<input type="checkbox"/>		If the project task is visible in the Purchases workspace
taskVisibleInSo	boolean	<input type="checkbox"/>		If the project task is visible in the Sales workspace
taskVisibleInTa	boolean	<input type="checkbox"/>		If the project task is visible in the Time entities workspace
visibleInAP	boolean	<input type="checkbox"/>		If the project is visible in AP

Columns of Table Function

The columns of the table function Projects are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
allocationRule_active	boolean		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
allocationRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
allocationRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
assets	double	Assets	<input type="checkbox"/>	The top part > Assesst > The actual assets for the project.
autoAllocate	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Run allocation w hen you release project transactions > A check box that indicates (if selected) that allocation is run automatically during the release of the documents associated w ith this project.
automaticReleaseAr	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Automatically release customer documents > A check box that indicates (if selected) that invoice documents are released automatically after the project invoicing is completed.
billingPeriod	string	Billing Period	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Invoicing period > The frequency of invoicing, w hich can be one of the follow ing options: Week, Month, Quarter, Year, On demand.
billingRule_active	boolean		<input type="checkbox"/>	
billingRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
billingRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>

Get a range of Projects - ScreenId=PM301000If AccModules_MaxPagination Feature Toggle is ON then request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page size

Catalog: VismaNet

Schema: Project

Label: Project Task Employees

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectTaskEmployees. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
attributes	string	<input type="checkbox"/>		Identifies the attributes
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandAttribute	boolean	<input type="checkbox"/>		Expands project attributes
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
nonProject	boolean	<input type="checkbox"/>		Set to true to return the non-project.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.

Name	Data Type	Required	Default Value	Documentation
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
publicId	guid	<input type="checkbox"/>		Identifies the Project by its publicId
restrictedEmployee	string	<input type="checkbox"/>		ID of the employee where access restrictions apply
restrictedUser	int64	<input type="checkbox"/>		Id of the odp user where access restrictions apply
startDate	datetime	<input type="checkbox"/>		Project's start date
status	string	<input type="checkbox"/>		Use drop down and select Status. (Waarden: Planned, Active, Completed, Cancelled, OnHold, PendingApproval)
systemTemplate	boolean	<input type="checkbox"/>		If the project is a template
taskStatus	string	<input type="checkbox"/>		Use drop down and select Status. (Waarden: Planned, Active, Cancelled, Canceled, Completed)
taskVisibleInAp	boolean	<input type="checkbox"/>		If the project task is visible in the Supplier ledger
taskVisibleInAr	boolean	<input type="checkbox"/>		If the project task is visible in the Customer ledger
taskVisibleInCa	boolean	<input type="checkbox"/>		If the project task is visible in the Cash management workspace
taskVisibleInCr	boolean	<input type="checkbox"/>		If the project task is visible in the CRM workspace
taskVisibleInEa	boolean	<input type="checkbox"/>		If the project task is visible in the Expense workspace
taskVisibleInGl	boolean	<input type="checkbox"/>		If the project task is visible in the General ledger workspace
taskVisibleInIn	boolean	<input type="checkbox"/>		If the project task is visible in the Inventory workspace
taskVisibleInPo	boolean	<input type="checkbox"/>		If the project task is visible in the Purchases workspace
taskVisibleInSo	boolean	<input type="checkbox"/>		If the project task is visible in the Sales workspace
taskVisibleInTa	boolean	<input type="checkbox"/>		If the project task is visible in the Time entities workspace
visibleInAP	boolean	<input type="checkbox"/>		If the project is visible in AP

Columns of Table Function

The columns of the table function ProjectTaskEmployees are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
address_addressId	int32	Address ID	<input type="checkbox"/>	
address_addressLine1	string	Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.
address_addressLine2	string	Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
address_addressLine3	string	Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
address_city	string	City	<input type="checkbox"/>	City > The city.
address_country_errorInfo	string		<input type="checkbox"/>	
address_country_id	string	Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
address_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
address_country_metadata_totalCount	int64		<input type="checkbox"/>	
address_country_name	string	Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
address_county_id	string	County ID	<input type="checkbox"/>	Click the magnifier > The identifier
address_county_name	string	County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
address_postalCode	string	Postal Code	<input type="checkbox"/>	Postcode > The postcode.
allocationRule_active	boolean		<input type="checkbox"/>	
allocationRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
allocationRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
assets	double	Assets	<input type="checkbox"/>	The top part > Asstest > The actual assets for the project.
autoAllocate	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Run allocation when you release project transactions > A check box that indicates (if selected) that allocation is run automatically during the release of the documents associated with this project.
automaticReleaseAr	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Automatically release customer documents > A check box that indicates (if selected) that invoice documents are released automatically after the project invoicing is completed.
billingPeriod	string	Billing Period	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section >

Name	Data Type	Label	Required	Documentation
				Invoicing period & The frequency of invoicing, which can be one of the following options: Week, Month, Quarter, Year, On demand.
billingRule_active	boolean		<input type="checkbox"/>	
billingRule_description	string		<input type="checkbox"/>	Click on the magnifier. & The description.
billingRule_id	string		<input type="checkbox"/>	Click on the magnifier. & The identifier.
branch_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. & The name.
branch_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. & The identifier.
calendarID	string		<input type="checkbox"/>	
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_attention	string		<input type="checkbox"/>	Attention & The attention line as it is used in your customer's/supplier's/company's business letters. The intention of this line is to direct the letter to the right person if the letter is not addressed to any specific person.
contact_contactId	int32	Contact ID	<input type="checkbox"/>	
contact_email	string	Contact Email	<input type="checkbox"/>	Email & The email address of the customer/supplier/company as a business entity.
contact_employeeContact	string		<input type="checkbox"/>	Employee contact & The link to the contact record associated with the employee.
contact_fax	string	Contact Fax	<input type="checkbox"/>	Fax & The fax number.
contact_firstName	string	Contact First Name	<input type="checkbox"/>	First name & The first name of the employee.
contact_lastName	string	Contact Last Name	<input type="checkbox"/>	Mandatory field: Last name* & The last name of the employee.
contact_midName	string	Contact Middle Name	<input type="checkbox"/>	Middle name & The middle name of the employee.
contact_name	string	Contact Name	<input type="checkbox"/>	Name & The legal name of to appear on the documents.
contact_phone1	string	Contact Phone 1	<input type="checkbox"/>	Phone 1 & The default phone number.
contact_phone2	string	Contact Phone 2	<input type="checkbox"/>	Phone 2 & An additional phone number.
contact_phone3	string	Contact Phone 3	<input type="checkbox"/>	Phone 3 & An additional phone number of the employee.
contact_title	string	Contact Title	<input type="checkbox"/>	Title & The courtesy title to be used for the employee.

Name	Data Type	Label	Required	Documentation
contact_w eb	string	Contact Website	<input type="checkbox"/>	Web > The website of the company, if one exists.

73.1.19 ProjectTaskEmployees1: Visma.net Financials Project Task Employees

Get all tasks for a project

Catalog: VismaNet

Schema: Project

Label: Project Task Employees

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectTaskEmployees1. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four

parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
description	string	<input type="checkbox"/>		Identifies the Project task description
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
projectId	string	<input type="checkbox"/>		Identifies the Project

Name	Data Type	Required	Default Value	Documentation
projectInternalId	int32	<input type="checkbox"/>		Identifies the project by internal id
publicId	guid	<input type="checkbox"/>		Identifies the project by publicId

73.1.20 ProjectTasks: Visma.net Financials Project Tasks

Get a range of Projects - ScreenId=PM301000If AccModules_MaxPagination Feature Toggle is ON then request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page size

Catalog: VismaNet

Schema: Project

Label: Project Tasks

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectTasks. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
attributes	string	<input type="checkbox"/>		Identifies the attributes
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandAttribute	boolean	<input type="checkbox"/>		Expands project attributes
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
nonProject	boolean	<input type="checkbox"/>		Set to true to return the non-project.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
publicId	guid	<input type="checkbox"/>		Identifies the Project by its publicId
restrictedEmployee	string	<input type="checkbox"/>		ID of the employee where access restrictions apply
restrictedUser	int64	<input type="checkbox"/>		Id of the odp user where access restrictions apply
startDate	datetime	<input type="checkbox"/>		Project's start date
status	string	<input type="checkbox"/>		Use drop down and select Status. (Waarden: Planned, Active, Completed, Cancelled, OnHold, PendingApproval)
systemTemplate	boolean	<input type="checkbox"/>		If the project is a template
taskStatus	string	<input type="checkbox"/>		Use drop down and select Status. (Waarden: Planned, Active, Cancelled, Canceled, Completed)

Name	Data Type	Required	Default Value	Documentation
taskVisibleInAp	boolean	<input type="checkbox"/>		If the project task is visible in the Supplier ledger
taskVisibleInAr	boolean	<input type="checkbox"/>		If the project task is visible in the Customer ledger
taskVisibleInCa	boolean	<input type="checkbox"/>		If the project task is visible in the Cash management workspace
taskVisibleInCr	boolean	<input type="checkbox"/>		If the project task is visible in the CRM workspace
taskVisibleInEa	boolean	<input type="checkbox"/>		If the project task is visible in the Expense workspace
taskVisibleInGl	boolean	<input type="checkbox"/>		If the project task is visible in the General ledger workspace
taskVisibleInIn	boolean	<input type="checkbox"/>		If the project task is visible in the Inventory workspace
taskVisibleInPo	boolean	<input type="checkbox"/>		If the project task is visible in the Purchases workspace
taskVisibleInSo	boolean	<input type="checkbox"/>		If the project task is visible in the Sales workspace
taskVisibleInTa	boolean	<input type="checkbox"/>		If the project task is visible in the Time entities workspace
visibleInAP	boolean	<input type="checkbox"/>		If the project is visible in AP

Columns of Table Function

The columns of the table function ProjectTasks are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
allocationRule_active	boolean		<input type="checkbox"/>	
allocationRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
allocationRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
assets	double	Assets	<input type="checkbox"/>	The top part > Assesst >; The actual assets for the project.
autoAllocate	boolean		<input type="checkbox"/>	Summary tab >; Invoicing and allocation settings section >; Run allocation when you release project transactions >; A check box that indicates (if selected) that allocation is run automatically during the release of the documents associated with this project.
automaticReleaseAr	boolean		<input type="checkbox"/>	Summary tab >; Invoicing and allocation settings section >; Automatically release customer documents >; A check box that indicates (if selected) that invoice documents are released automatically after the project invoicing is completed.

Name	Data Type	Label	Required	Documentation
billingPeriod	string	Billing Period	<input type="checkbox"/>	Summary tab & Invoicing and allocation settings section & Invoicing period & The frequency of invoicing, which can be one of the following options: Week, Month, Quarter, Year, On demand.
billingRule_active	boolean		<input type="checkbox"/>	
billingRule_description	string		<input type="checkbox"/>	Click on the magnifier. & The description.
billingRule_id	string		<input type="checkbox"/>	Click on the magnifier. & The identifier.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. & The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerLocation_id	int32		<input type="checkbox"/>	Click the magnifier & The identifier
customerLocation_name	string		<input type="checkbox"/>	Click the magnifier & The displayed name
defAccount_description	string		<input type="checkbox"/>	Name of item/description
defAccount_number	string		<input type="checkbox"/>	Number of item
defAccount_type	string		<input type="checkbox"/>	
defAccrualAccount_description	string		<input type="checkbox"/>	Name of item/description
defAccrualAccount_number	string		<input type="checkbox"/>	Number of item
defAccrualAccount_type	string		<input type="checkbox"/>	
defAccrualSub_description	string		<input type="checkbox"/>	Click on the magnifier. & The description.
defAccrualSub_id	string		<input type="checkbox"/>	Click on the magnifier. & The identifier.
defSub_description	string		<input type="checkbox"/>	Click on the magnifier. & The description.
defSub_id	string		<input type="checkbox"/>	Click on the magnifier. & The identifier.
description_1	string		<input type="checkbox"/>	Mandatory field: The top part & Description* & The description of the project.
description	string	Description	<input type="checkbox"/>	Mandatory field: Description & The description of the task.
endDate	datetime	End Date	<input type="checkbox"/>	Summary tab & Project properties section & End date & The date when the project is expected to end.
errorInfo	string	Error Message	<input type="checkbox"/>	
expenses	double	Expenses	<input type="checkbox"/>	The top part & Expenses & The total of the current expenses incurred by the project.

Name	Data Type	Label	Required	Documentation
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that you select to indicate that the project should have the In planning status.
income	double	Income	<input type="checkbox"/>	The top part > Income > The income expected from the project.
internalID	int32	Internal ID	<input type="checkbox"/>	
lastBillingDate	datetime	Last Billing Date	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Last invoicing date > The date when the latest invoicing was performed for the project.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated information
liability	double	Liability	<input type="checkbox"/>	The top part > Liabilities > The actual liabilities for the project.
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
nextBillingDate	datetime	Next Billing Date	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Next invoicing date > The date for which the next invoicing is scheduled for the project.
plannedEnd	datetime		<input type="checkbox"/>	
plannedStart	datetime		<input type="checkbox"/>	
projectID	string	Project ID	<input type="checkbox"/>	Mandatory field: The top part > Project ID* > The unique ID for the project.
projectManager_address_addressID	int32		<input type="checkbox"/>	
projectManager_address_addressLine1	string		<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.
projectManager_address_addressLine2	string		<input type="checkbox"/>	Address 2 > The second line of the address.
projectManager_address_addressLine3	string		<input type="checkbox"/>	Address 3 > The third line of the address.
projectManager_address_city	string		<input type="checkbox"/>	City > The city.
projectManager_address_country_errorInfo	string		<input type="checkbox"/>	
projectManager_address_country_id	string		<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
projectManager_address_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
projectManager_address_country_metadata_totalCount	int64		<input type="checkbox"/>	
projectManager_address_country_name	string		<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the

Name	Data Type	Label	Required	Documentation
				country.
projectManager_address_county_id	string		<input type="checkbox"/>	Click the magnifier > The identifier
projectManager_address_county_name	string		<input type="checkbox"/>	Click the magnifier > The displayed name
projectManager_address_postalCode	string		<input type="checkbox"/>	Postcode > The postcode.
projectManager_branch_name	string		<input type="checkbox"/>	Click the magnifier. > The name.
projectManager_branch_number	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
projectManager_calendarID	string		<input type="checkbox"/>	
projectManager_contact_attention	string		<input type="checkbox"/>	Attention > The attention line as it is used in your customer's/supplier's/company's business letters. The intention of this line is to direct the letter to the right person if the letter is not addressed to any specific person.
projectManager_contact_contactId	int32		<input type="checkbox"/>	
projectManager_contact_email	string		<input type="checkbox"/>	Email > The email address of the customer/supplier/company as a business entity.
projectManager_contact_employeeContact	string		<input type="checkbox"/>	Employee contact > The link to the contact record associated with the employee.
projectManager_contact_fax	string		<input type="checkbox"/>	Fax > The fax number.
projectManager_contact_firstName	string		<input type="checkbox"/>	First name > The first name of the employee.
projectManager_contact_lastName	string		<input type="checkbox"/>	Mandatory field: Last name* > The last name of the employee.
projectManager_contact_midName	string		<input type="checkbox"/>	Middle name > The middle name of the employee.
projectManager_contact_name	string		<input type="checkbox"/>	Name > The legal name of to appear on the documents.
projectManager_contact_phone1	string		<input type="checkbox"/>	Phone 1 > The default phone number.
projectManager_contact_phone2	string		<input type="checkbox"/>	Phone 2 > An additional phone number.
projectManager_contact_phone3	string		<input type="checkbox"/>	Phone 3 > An additional phone number of the employee.
projectManager_contact_title	string		<input type="checkbox"/>	Title > The courtesy title to be used for the employee.
projectManager_contact_web	string		<input type="checkbox"/>	Web > The website of the company, if one exists.
projectManager_department	string	Project Manager Department	<input type="checkbox"/>	Mandatory field: General information tab > Employee section > Department* > The department the employee works for.

Name	Data Type	Label	Required	Documentation

73.1.21 ProjectTasks_EmployeesWorkGroupDescription

Get all tasks for a project

Catalog: VismaNet

Schema: Project

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectTasks_EmployeesWorkGroupDescription. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
description	string	<input type="checkbox"/>		Identifies the Project task description
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Name	Data Type	Required	Default Value	Documentation
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. Page number and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
projectId	string	<input type="checkbox"/>		Identifies the Project
projectInternalId	int32	<input type="checkbox"/>		Identifies the project by internal id
publicId	guid	<input type="checkbox"/>		Identifies the project by publicId
restrictedEmployee	string	<input type="checkbox"/>		Id of the employee where access restrictions apply
restrictedUser	int64	<input type="checkbox"/>		Id of the Odp User where access restrictions apply
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. Page number and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. (Waarden: Planned, Active, Cancelled, Canceled, Completed)
taskCd	string	<input type="checkbox"/>		Identifies the Project task ID
taskCdDesc	string	<input type="checkbox"/>		Identifies the Project task ID and description
visibleInAp	boolean	<input type="checkbox"/>		If the project task is visible in the Supplier ledger

Name	Data Type	Required	Default Value	Documentation
visibleInAr	boolean	<input type="checkbox"/>		If the project task is visible in the Customer ledger
visibleInCa	boolean	<input type="checkbox"/>		If the project task is visible in the Cash management workspace
visibleInCr	boolean	<input type="checkbox"/>		If the project task is visible in the CRM workspace
visibleInEa	boolean	<input type="checkbox"/>		If the project task is visible in the Expense workspace
visibleInGl	boolean	<input type="checkbox"/>		If the project task is visible in the General ledger workspace
visibleInIn	boolean	<input type="checkbox"/>		If the project task is visible in the Inventory workspace
visibleInPo	boolean	<input type="checkbox"/>		If the project task is visible in the Purchases workspace
visibleInSo	boolean	<input type="checkbox"/>		If the project task is visible in the Sales workspace
visibleInTa	boolean	<input type="checkbox"/>		If the project task is visible in the Time entities workspace

Columns of Table Function

The columns of the table function ProjectTasks_EmployeesWorkGroupDescription are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
address_addressId	int32	Address ID	<input type="checkbox"/>	
address_addressLine1	string	Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.
address_addressLine2	string	Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
address_addressLine3	string	Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
address_city	string	City	<input type="checkbox"/>	City > The city.
address_country_errorInfo	string		<input type="checkbox"/>	
address_country_id	string	Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
address_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
address_country_metadata_totalCount	int64		<input type="checkbox"/>	
address_country_name	string	Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
address_county_id	string	County ID	<input type="checkbox"/>	Click the magnifier > The identifier

Name	Data Type	Label	Required	Documentation
address_county_name	string	County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
address_postalCode	string	Postal Code	<input type="checkbox"/>	Postcode > The postcode.
branch_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branch_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
calendarID	string		<input type="checkbox"/>

73.1.22 ProjectTasks1: Visma.net Financials Project Tasks

Get all tasks for a project

Catalog: VismaNet

Schema: Project

Label: Project Tasks

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectTasks1. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
description	string	<input type="checkbox"/>		Identifies the Project task description
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.

Name	Data Type	Required	Default Value	Documentation
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
projectId	string	<input type="checkbox"/>		Identifies the Project
projectInternalId	int32	<input type="checkbox"/>		Identifies the project by internal id
publicId	guid	<input type="checkbox"/>		Identifies the project by publicId
restrictedEmployee	string	<input type="checkbox"/>		Id of the employee where access restrictions apply
restrictedUser	int64	<input type="checkbox"/>		Id of the Odp User where access restrictions apply
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. (Waarden: Planned, Active, Cancelled, Canceled, Completed)
taskCd	string	<input type="checkbox"/>		Identifies the Project task ID
taskCdDesc	string	<input type="checkbox"/>		Identifies the Project task ID and description
visibleInAp	boolean	<input type="checkbox"/>		If the project task is visible in the Supplier ledger
visibleInAr	boolean	<input type="checkbox"/>		If the project task is visible in the Customer ledger
visibleInCa	boolean	<input type="checkbox"/>		If the project task is visible in the Cash management workspace
visibleInCr	boolean	<input type="checkbox"/>		If the project task is visible in the CRM workspace
visibleInEa	boolean	<input type="checkbox"/>		If the project task is visible in the Expense workspace
visibleInGl	boolean	<input type="checkbox"/>		If the project task is visible in the General ledger workspace

Name	Data Type	Required	Default Value	Documentation
visibleInIn	boolean	<input type="checkbox"/>		If the project task is visible in the Inventory workspace
visibleInPo	boolean	<input type="checkbox"/>		If the project task is visible in the Purchases workspace
visibleInSo	boolean	<input type="checkbox"/>		If the project task is visible in the Sales workspace
visibleInTa	boolean	<input type="checkbox"/>		If the project task is visible in the Time entities workspace

Label: Project Tasks Employees by Project ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectTasksEmployeesByProjectID. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with

Name	Data Type	Required	Default Value	Documentation
				a 202-Accepted status and a reference to a state document for the background operation.
projectID	string	<input checked="" type="checkbox"/>		Identifies the Project

Columns of Table Function

The columns of the table function ProjectTasksEmployeesByProjectID are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
address_addressId	int32	Address ID	<input type="checkbox"/>	
address_addressLine1	string	Address Line 1	<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.
address_addressLine2	string	Address Line 2	<input type="checkbox"/>	Address 2 > The second line of the address.
address_addressLine3	string	Address Line 3	<input type="checkbox"/>	Address 3 > The third line of the address.
address_city	string	City	<input type="checkbox"/>	City > The city.
address_country_errorInfo	string		<input type="checkbox"/>	
address_country_id	string	Country ID	<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
address_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
address_country_metadata_totalCount	int64		<input type="checkbox"/>	
address_country_name	string	Country Name	<input type="checkbox"/>	Mandatory field: Country name* > The complete name of the country.
address_county_id	string	County ID	<input type="checkbox"/>	Click the magnifier > The identifier
address_county_name	string	County Name	<input type="checkbox"/>	Click the magnifier > The displayed name
address_postalCode	string	Postal Code	<input type="checkbox"/>	Postcode > The postcode.
allocationRule_active	boolean		<input type="checkbox"/>	
allocationRule_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
allocationRule_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
assets	double	Assets	<input type="checkbox"/>	The top part > Asset > The actual assets for the project.
autoAllocate	boolean		<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Run allocation when you release project transactions > A check box that indicates (if

Name	Data Type	Label	Required	Documentation
				selected) that allocation is run automatically during the release of the documents associated with this project.
automaticReleaseAr	boolean		<input type="checkbox"/>	Summary tab & Invoicing and allocation settings section & Automatically release customer documents & A check box that indicates (if selected) that invoice documents are released automatically after the project invoicing is completed.
billingPeriod	string	Billing Period	<input type="checkbox"/>	Summary tab & Invoicing and allocation settings section & Invoicing period & The frequency of invoicing, which can be one of the following options: Week, Month, Quarter, Year, On demand.
billingRule_active	boolean		<input type="checkbox"/>	
billingRule_description	string		<input type="checkbox"/>	Click on the magnifier. & The description.
billingRule_id	string		<input type="checkbox"/>	Click on the magnifier. & The identifier.
branch_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. & The name.
branch_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. & The identifier.
calendarID	string		<input type="checkbox"/>	
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contact_attention	string		<input type="checkbox"/>	Attention & The attention line as it is used in your customer's/supplier's/company's business letters. The intention of this line is to direct the letter to the right person if the letter is not addressed to any specific person.
contact_contactId	int32	Contact ID	<input type="checkbox"/>	
contact_email	string	Contact Email	<input type="checkbox"/>	Email & The email address of the customer/supplier/company as a business entity.
contact_employeeContact	string		<input type="checkbox"/>	Employee contact & The link to the contact record associated with the employee.
contact_fax	string	Contact Fax	<input type="checkbox"/>	Fax & The fax number.
contact_firstName	string	Contact First Name	<input type="checkbox"/>	First name & The first name of the employee.
contact_lastName	string	Contact Last Name	<input type="checkbox"/>	Mandatory field: Last name* & The last name of the employee.

Name	Data Type	Label	Required	Documentation
contact_midName	string	Contact Middle Name	<input type="checkbox"/>	Middle name > The middle name of the employee.
contact_name	string	Contact Name	<input type="checkbox"/>	Name > The legal name of to appear on the documents.
contact_phone1	string	Contact Phone 1	<input type="checkbox"/>	Phone 1 > The default phone number.
contact_phone2	string	Contact Phone 2	<input type="checkbox"/>	Phone 2 > An additional phone number.
contact_phone3	string	Contact Phone 3	<input type="checkbox"/>	Phone 3 > An additional phone number of the employee.
contact_title	string	Contact Title	<input type="checkbox"/>	Title > The courtesy title to be used for the employee.
contact_w eb	string	Contact Website	<input type="checkbox"/>	Web > The w ebsite of the company, if one exists.
customer_name	string	Customer Name	<input type="checkbox"/>	Click the magnifier. > The name.
customer_number	string	Customer Number	<input type="checkbox"/>	
customerLocation_id	int32		<input type="checkbox"/>	Click the magnifier > The identifier
customerLocation_name	string		<input type="checkbox"/>	Click the magnifier > The displayed name
defAccount_description	string		<input type="checkbox"/>	Name of item/description
defAccount_number	string		<input type="checkbox"/>	Number of item
defAccount_type	string		<input type="checkbox"/>	
defAccrualAccount_description	string		<input type="checkbox"/>	Name of item/description
defAccrualAccount_number	string		<input type="checkbox"/>	Number of item
defAccrualAccount_type	string		<input type="checkbox"/>	
defAccrualSub_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
defAccrualSub_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
defSub_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
defSub_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
department	string	Department	<input type="checkbox"/>	Mandatory field: General information tab > Employee section > Department* > The department the employee works for.
description_1	string		<input type="checkbox"/>	Mandatory field: The top part > Description* > The description of the project.
description	string	Description	<input type="checkbox"/>	Mandatory field: Description > The description of the task.
employeeClass_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
employeeClass_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.

Name	Data Type	Label	Required	Documentation
employeeId	int32	Employee ID	<input type="checkbox"/>	Mandatory field: The top part > Employee ID* > The unique identifier, which is assigned to the employee in accordance with the configuration of the EMPLOYEE segmented key.
employeeLogin	string		<input type="checkbox"/>	
employeeName	string	Employee Name	<input type="checkbox"/>	The top part > Employee name > The name of this employee.
employeeNumber	string	Employee Number	<input type="checkbox"/>	General information tab > Employee settings section > Employee ref. no. > A reference number for the employee.
employeeUserId	guid		<input type="checkbox"/>	Employee internal user ID. This is the ID of the user linked to the employee
endDate	datetime	End Date	<input type="checkbox"/>	Summary tab > Project properties section > End date > The date when the project is expected to end.
errorInfo_1	string		<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
expenses	double	Expenses	<input type="checkbox"/>	The top part > Expenses > The total of the current expenses incurred by the project.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that you select to indicate that the project should have the In planning status.
income	double	Income	<input type="checkbox"/>	The top part > Income > The income expected from the project.
internalID	int32	Internal ID	<input type="checkbox"/>	
lastBillingDate	datetime	Last Billing Date	<input type="checkbox"/>	Summary tab > Invoicing and allocation settings section > Last invoicing date > The date when the latest invoicing was performed for the project.
lastModifiedDate_1	datetime		<input type="checkbox"/>	System generated information
lastModifiedDate	datetime	Last Modified	<input type="checkbox"/>	
liability	double	Liability	<input type="checkbox"/>	The top part > Liabilities > The actual liabilities for the project.

76 Schema: ProjectBudget

76.1 Tables

76.1.1 ProjectBudgets: Visma.net Financials Project Budgets

Get a range of Project Budgets - ScreenId=PM309000

Catalog: VismaNet

Schema: ProjectBudget

Label: Project Budgets

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectBudgets. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

77.1.3 ProjectTasks: Visma.net Financials Project Tasks

Catalog: VismaNet

Schema: ProjectTask

Label: Project Tasks

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectTasks. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
description	string	<input type="checkbox"/>		Identifies the Project task description
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
projectId	string	<input type="checkbox"/>		Identifies the Project
projectInternalId	int32	<input type="checkbox"/>		Identifies the project by internal id
publicId	guid	<input type="checkbox"/>		Identifies the project by publicId

78 Schema: ProjectTransaction

78.1 Tables

78.1.1 ProjectTransactionByReferenceNumber: Visma.net Financials Project Transaction by Reference Number

Get a specific Project transaction document

Catalog: VismaNet

Schema: ProjectTransaction

Label: Project Transaction by Reference Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectTransactionByReferenceNumber. A value must be provided at all times for required

parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
refNbr	string	<input checked="" type="checkbox"/>		Identifies the project transaction document

Columns of Table Function

The columns of the table function ProjectTransactionByReferenceNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
description	string	Description	<input type="checkbox"/>	The top part > Description > The description provided for the transaction.
errorInfo	string	Error Message	<input type="checkbox"/>

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
refNbr	string	<input checked="" type="checkbox"/>		Identifies the project transaction document

Columns of Table Function

The columns of the table function ProjectTransactionLinesByReferenceNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
accountGroup_name	string	General Ledger Account Group Name	<input type="checkbox"/>	Click the magnifier. > The name.
accountGroup_number	string	General Ledger Account Group Number	<input type="checkbox"/>	Click the magnifier. > The identifier.

Name	Data Type	Label	Required	Documentation
allocated	boolean	Allocated	<input type="checkbox"/>	Allocated > A check box that indicates whether the amounts of the transactions were allocated for the project.
amount	double	Amount	<input type="checkbox"/>	Amount > The amount of the transaction.
batchNbr	string	Batch Number	<input type="checkbox"/>	Batch no. > The batch number of the transaction in the General ledger workspace.
billable	boolean	Billable	<input type="checkbox"/>	Invoiceable > A check box indicating whether the transaction is used in calculating the amount charged to the customer for the project task.
billableQuantity	double	Billable Quantity	<input type="checkbox"/>	Qty. that can be invoiced > The total invoiceable quantity for the transactions listed in the table.
branch_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branch_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
creditAccount_description	string		<input type="checkbox"/>	Name of item/description
creditAccount_externalCode1	string		<input type="checkbox"/>	Account class > The identifier of the account class.
creditAccount_externalCode2	string		<input type="checkbox"/>	Account class > The name of the account class.
creditAccount_number	string		<input type="checkbox"/>	Number of item
creditAccount_type	string		<input type="checkbox"/>	Account > The account number.
creditAccountGroup_name	string		<input type="checkbox"/>	Click the magnifier. > The name.
creditAccountGroup_number	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
creditSubaccount_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
creditSubaccount_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
customerVendor_internalId	int32		<input type="checkbox"/>	
customerVendor_name	string		<input type="checkbox"/>	The name of the particular destination of the selected type.
customerVendor_number	string		<input type="checkbox"/>	The identifier of the particular destination of the selected type.
date	datetime	Date	<input type="checkbox"/>	Date > The date the transaction was created.
debitAccount_description	string		<input type="checkbox"/>	Name of item/description
debitAccount_externalCode1	string		<input type="checkbox"/>	Account class > The identifier of the account class.

Name	Data Type	Label	Required	Documentation
debitAccount_externalCode2	string		<input type="checkbox"/>	Account class & The name of the account class.
debitAccount_number	string		<input type="checkbox"/>	Number of item
debitAccount_type	string		<input type="checkbox"/>	Account & The account number.
debitAccountGroup_name	string		<input type="checkbox"/>	Click the magnifier. & The name.
debitAccountGroup_number	string		<input type="checkbox"/>	Click the magnifier. & The identifier.
debitSubaccount_description	string		<input type="checkbox"/>	Click on the magnifier. & The description.
debitSubaccount_id	string		<input type="checkbox"/>	Click on the magnifier. & The identifier.
description_1	string		<input type="checkbox"/>	The top part & Description & The description provided for the transaction.
description	string	Description	<input type="checkbox"/>	Description & The description of the transaction.
earningType_code	string		<input type="checkbox"/>	Mandatory field: Code* & The unique ID of the type of hour.
earningType_description	string		<input type="checkbox"/>	Mandatory field: Description & The brief description of the type of hour.
earningType_isActive	boolean		<input type="checkbox"/>	Active & A check box that indicates (if selected) that the type of hour is active and can be used.
earningType_isBillable	boolean		<input type="checkbox"/>	Invoicable & A check box that indicates (if selected) that the type is treated as invoiceable by default.
earningType_isOvertime	boolean		<input type="checkbox"/>	Overtime & A check box that indicates (if selected) that the type of hour is treated as overtime.
earningType_lastModifiedDateTime	datetime		<input type="checkbox"/>	System generated information.
earningType_overtimeMultiplier	double		<input type="checkbox"/>	Multiplier & The value by which the employee cost for this type of hour is multiplied when the time activity is released.
employee_address_addressId	int32		<input type="checkbox"/>	
employee_address_addressLine1	string		<input type="checkbox"/>	Address 1 & The first line of the customer's/supplier's/company's/employee's contact address.
employee_address_addressLine2	string		<input type="checkbox"/>	Address 2 & The second line of the address.
employee_address_addressLine3	string		<input type="checkbox"/>	Address 3 & The third line of the address.
employee_address_city	string		<input type="checkbox"/>	City & The city.
employee_address_country_errorInfo	string		<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
employee_address_country_id	string		<input type="checkbox"/>	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
employee_address_country_metadata_maxPageSize	int64		<input type="checkbox"/>	
employee_address_country_metadata_totalCount	int64		<input type="checkbox"/>	
employee_address_country_name	string		<input type="checkbox"/>	Mandatory field: Country name* > > The complete name of the country.
employee_address_county_id	string		<input type="checkbox"/>	Click the magnifier > The identifier
employee_address_county_name	string		<input type="checkbox"/>	Click the magnifier > The displayed name
employee_address_postalCode	string		<input type="checkbox"/>	Postcode > The postcode.
employee_branch_name	string		<input type="checkbox"/>	Click the magnifier. > The name.
employee_branch_number	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
employee_calendarID	string		<input type="checkbox"/>	
employee_contact_attention	string		<input type="checkbox"/>	Attention > The attention line as it is used in your customer's/supplier's/company's business letters. The intention of this line is to direct the letter to the right person if the letter is not addressed to any specific person.
employee_contact_contactId	int32		<input type="checkbox"/>	
employee_contact_email	string		<input type="checkbox"/>	Email > The email address of the customer/supplier/company as a business entity.
employee_contact_employeeContact	string		<input type="checkbox"/>	Employee contact > The link to the contact record associated with the employee.
employee_contact_fax	string		<input type="checkbox"/>	Fax > The fax number.
employee_contact_firstName	string		<input type="checkbox"/>	First name > The first name of the employee.
employee_contact_lastName	string		<input type="checkbox"/>	Mandatory field: Last name* > > The last name of the employee.
employee_contact_midName	string		<input type="checkbox"/>	Middle name > The middle name of the employee.
employee_contact_name	string		<input type="checkbox"/>	Name > The legal name of to appear on the documents.
employee_contact_phone1	string		<input type="checkbox"/>	Phone 1 > The default phone number.
employee_contact_phone2	string		<input type="checkbox"/>	Phone 2 > An additional phone number.
employee_contact_phone3	string		<input type="checkbox"/>	Phone 3 > An additional phone number of the employee.

Name	Data Type	Label	Required	Documentation
employee_contact_title	string		<input type="checkbox"/>	Title > The courtesy title to be used for the employee.
employee_contact_web	string		<input type="checkbox"/>	Web > The website of the company, if one exists.
employee_department	string		<input type="checkbox"/>	Mandatory field: General information tab > Employee section > Department* > The department the employee works for.
employee_employeeClass_description	string		<input type="checkbox"/>	Click on the magnifier. > The description.
employee_employeeClass_id	string		<input type="checkbox"/>	Click on the magnifier. > The identifier.
employee_employeeId	int32		<input type="checkbox"/>	Mandatory field: The top part > Employee ID* > The unique identifier, which is assigned to the employee in accordance with the configuration of the EMPLOYEE segmented key.
employee_employeeLogin	string		<input type="checkbox"/>	
employee_employeeName	string		<input type="checkbox"/>	The top part > Employee name > The name of this employee.
employee_employeeNumber	string		<input type="checkbox"/>	General information tab > Employee settings section > Employee ref. no. > A reference number for the employee.
employee_employeeUserId	guid		<input type="checkbox"/>	Employee internal user ID. This is the ID of the user linked to the employee
employee_errorInfo	string		<input type="checkbox"/>	
employee_lastModifiedDate	datetime		<input type="checkbox"/>	
employee_metadata_maxPageSize	int64		<input type="checkbox"/>	
employee_metadata_totalCount	int64		<input type="checkbox"/>	
employee_status	string		<input type="checkbox"/>	Mandatory field: The top part > Status > The status of the employee. The following options are available: Active, On hold, Hold payments, Inactive, One-time.
endDate	datetime	End Date	<input type="checkbox"/>	End date > The end date for this transaction
errorInfo_1	string		<input type="checkbox"/>	
errorInfo	string	Error Message	<input type="checkbox"/>	
financialPeriod	string	Financial Period	<input type="checkbox"/>	Period > The financial period associated with the transaction.
inventoryId_description	string		<input type="checkbox"/>	Name of item/description
inventoryId_number	string		<input type="checkbox"/>	Number of item
lastModifiedDate	datetime	Last Modified	<input type="checkbox"/>	System generated information
location_countryId	string	Location Country ID	<input type="checkbox"/>	Location*.

Name	Data Type	Label	Required	Documentation
location_id	string	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
metadata_maxPageSize_1	int64		<input type="checkbox"/>

projectTask_description	string	Project Task Description	<input type="checkbox"/>	Click on the magnifier. > The description.
projectTask_id	string	Project Task ID	<input type="checkbox"/>	Click on the magnifier. > The identifier.
quantity	double	Quantity	<input type="checkbox"/>	Quantity > The quantity for the transaction, such as the number of service hours provided to the customer.
refNbr	string	Reference Number	<input type="checkbox"/>	The top part > Ref. no. > The reference number of the transaction.
released	boolean	Released	<input type="checkbox"/>	Released > A check box indicating whether the transaction has been released.
startDate	datetime	Start Date	<input type="checkbox"/>	Start date > The start date for this transaction.
status	string	Status	<input type="checkbox"/>	The top part > Status > The status of the transaction. The following statuses are possible: Balanced, Released.

Name	Data Type	Label	Required	Documentation
tranId	int64		<input type="checkbox"/>	
unitRate	double		<input type="checkbox"/>	Unit rate > The price of the item or the rate of the service.
uom	string	Unit of Measure	<input type="checkbox"/>	UoM > The unit of measure used to estimate the quantity for the transaction, such as HOUR or BOX.
useBillableQty	boolean		<input type="checkbox"/>	Use the quantity that can be invoiced in the amount formula > A check box that you select if you want the system to use the invoiceable quantity (the Invoiceable quantity column) instead of the overall quantity (the Quantity column) of the transaction when calculating the amount of transaction.

78.1.4 ProjectTransactions: Visma.net Financials Project Transactions

Get a range of Project transaction documents - ScreenId=PM304000

Catalog: VismaNet

Schema: ProjectTransaction

Label: Project Transactions

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function ProjectTransactions. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
billable	boolean	<input type="checkbox"/>		Filter invoiceable project tasks.

Name	Data Type	Required	Default Value	Documentation
branch	string	<input type="checkbox"/>		Filter on branch for the project transaction.
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
createdDateTime	string	<input type="checkbox"/>		Creation date and time.
createdDateTimeCondition	string	<input type="checkbox"/>		System-retrieved information for state/condition
date	datetime	<input type="checkbox"/>		Filter on the registration date for the project transaction.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
expandNote	boolean	<input type="checkbox"/>		Expands project transaction notes
fromPeriod	string	<input type="checkbox"/>		Mandatory. Start date for the task.
greaterThanValue	string	<input type="checkbox"/>		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
module	string	<input type="checkbox"/>		Select to filter on module; e.g. AR, AP, IN etc. (Waarden: ModuleGL, ModuleAP, ModuleAR, ModuleCA, ModuleCM, ModuleIN, ModuleSO, ModulePO, ModuleDR, ModuleFA, ModuleEP, ModulePM, ModuleTX, ModuleCR)
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata

Name	Data Type	Required	Default Value	Documentation
				information.If requested page size is greater than allowed max page size, request will be limited to max page size.
project	string	<input type="checkbox"/>		Filter on project ID.
projectTask	string	<input type="checkbox"/>		Filter on Task ID.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pagenumber and pagesize for pagination purposes. Pagenumber and pagesize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		The status of the document. (Waarden: Hold, Balanced, Released)
toPeriod	string	<input type="checkbox"/>		Mandatory. End date for the task.

79.1.2 PurchaseOrderLines: Visma.net Financials Purchase Order Lines

Get a range of Purchase Order - ScreenId=PO301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added forced pagination

Catalog: VismaNet

Schema: PurchaseOrder

Label: Purchase Order Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PurchaseOrderLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Filter on order no. and forward
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pagesize for pagination purposes. PageNumber and pagesize does not work with NumberToRead and SkipRecords.
orderStatus	string	<input type="checkbox"/>		Select and filter on Status. (Waarden: Balanced, Cancelled, Closed, Hold, Open,

Name	Data Type	Required	Default Value	Documentation
				PendingEmail, PendingPrint, Printed, Voided)
orderType	string	<input type="checkbox"/>		Select and filter on Type. (Waarden: RegularOrder, DropShip, Blanket, StandardBlanket)
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
supplier	string	<input type="checkbox"/>		Filter on Supplier.

Columns of Table Function

The columns of the table function PurchaseOrderLines are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	
alternateld	string	Alternate ID	<input type="checkbox"/>	Alternate ID > The alternate ID used for this stock item-subitem pair by the supplier.
amount	double	Amount	<input type="checkbox"/>	Amount > The amount calculated (after the discount has been taken) for the item.
branch_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branch_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branch_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branch_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
canceled	boolean	Canceled	<input type="checkbox"/>	Cancelled > A check box that indicates (if selected) that this

Name	Data Type	Label	Required	Documentation
				line of the purchase order has been cancelled.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
completed	boolean	Completed	<input type="checkbox"/>	Completed > A check box that indicates (if selected) that the purchasing of the item requested by this line of the purchase order has been completed.
completeOn	double		<input type="checkbox"/>	Complete on (%) > The minimum percentage of the ordered quantity for the stock item that must be received to complete the purchase order line (gets the default value from the Threshold receipt (%) setting of the supplier in the (AP303000) window).
controlTotal	double	Total for Control	<input type="checkbox"/>	The top part > Control total > The order's total amount (including VAT), which you must enter manually when you attempt to save the order with the Balanced status.
controlTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Control total to your base currency if the amount on the purchase order is in another currency than base currency. When you click the button, the button toggles to View currency.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency > The currency the purchase order will be paid in.
date	datetime	Date	<input type="checkbox"/>	Mandatory field: The top part > Date* > The date when the purchase order was created.
description	string	Description	<input type="checkbox"/>	The top part > Description > A brief description of the purchase order.
discountAmount	double		<input type="checkbox"/>	Discount amount > If the Supplier customer discounts functionality is enabled in the Enable/disable functionalities (CS100000) window, the amount of the discount that has been specified manually or calculated based on the discount percent entered manually.
discountCode_description	string	Discount Code Description	<input type="checkbox"/>	Name of item/description
discountCode_number	string	Discount Code Number	<input type="checkbox"/>	Number of item
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent > If the Supplier customer discounts

Name	Data Type	Label	Required	Documentation
				functionality is enabled in the Enable/disable functionalities (CS100000) window, the percent of the discount that has been entered manually or calculated based on the discount amount entered manually for this line item.
dontEmail	boolean	Don't Email	<input type="checkbox"/>	Other information > Do not email > A check box that indicates (if selected) indicates that the purchase order should not be emailed.
dontPrint	boolean	Don't Print	<input type="checkbox"/>	Other information > Do not print > A check box that indicates (if selected) that the current purchase order should not be printed.
emailed	boolean	Emailed	<input type="checkbox"/>	Other information > Emailed > A check box that indicates (if selected) indicates that the current purchase order was emailed.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	
extCost	double		<input type="checkbox"/>	Ext. cost > The extended cost of the item, which is the unit cost multiplied by the quantity.
fobPoint	string		<input type="checkbox"/>	Delivery instructions tab > The Delivery instructions section > FOB point > The FOB point where the title of goods (listed on this purchase order) is transferred from the supplier to the company.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that you select to give the purchase order the On hold status.
inventory_description	string	Inventory Description	<input type="checkbox"/>	Name of item/description
inventory_number	string	Inventory Number	<input type="checkbox"/>	Number of item
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated information.
lineDescription	string	Line Description	<input type="checkbox"/>	A description of the order line, which is copied from the item's description.
lineNbr	int32		<input type="checkbox"/>	The line number
lineTotal	double	Line Total	<input type="checkbox"/>	The top part > Line total > The total sum of the Extended amount entries for all lines in the current purchase order. This value is calculated by the system and users cannot manually change it.
lineTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the

Name	Data Type	Label	Required	Documentation
				Line total to your base currency if the amount on the purchase order is in another currency then base currency. When you click the button, the button toggles to View currency.
lineType	string	Line Type	<input type="checkbox"/>	Line type > The type of the order line, which can be one of the following options: Goods for inventory, Non-stock, Service, Freight, Good for sales order, Non-stock for drop-ship, Drop-ship, Goods for RP, Description.
location_id	int32	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name

79.1.3 PurchaseOrderOrderByPurchaseOrderNumber

Get a specific Purchase Order

Catalog: VismaNet

Schema: PurchaseOrder

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PurchaseOrderOrderByPurchaseOrderNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the

execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
purchaseOrderNumber	string	<input checked="" type="checkbox"/>		Identifies the Purchase Order

Columns of Table Function

The columns of the table function `PurchaseOrderOrderBypurchaseOrderNumber` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
branch_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branch_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
controlTotal	double	Total for Control	<input type="checkbox"/>	The top part > Control total > The order's total amount (including VAT), which you must enter manually when you attempt to save the order with the Balanced status.
controlTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Control total to your base currency if the amount on the purchase order is in another currency then base currency. When you click the button, the button toggles to View currency.

Name	Data Type	Label	Required	Documentation
currency	string	Currency	<input type="checkbox"/>	The top part > Currency > The currency the purchase order will be paid in.
date	datetime	Date	<input type="checkbox"/>	Mandatory field: The top part > Date* > The date when the purchase order was created.
description	string	Description	<input type="checkbox"/>	The top part > Description > A brief description of the purchase order.
dontEmail	boolean	Don't Email	<input type="checkbox"/>	Other information > Do not email > A check box that indicates (if selected) indicates that the purchase order should not be emailed.
dontPrint	boolean	Don't Print	<input type="checkbox"/>	Other information > Do not print > A check box that indicates (if selected) that the current purchase order should not be printed.
emailed	boolean	Emailed	<input type="checkbox"/>	Other information > Emailed > A check box that indicates (if selected) indicates that the current purchase order was emailed.

workgroupID	int32		<input type="checkbox"/>	Other information tab > Work group ID > The work group to which the purchase order was assigned for processing.

79.1.5 PurchaseOrderOrderBypurchaseOrderNumber_Lines

Get a specific Purchase Order

Catalog: VismaNet

Schema: PurchaseOrder

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PurchaseOrderOrderBypurchaseOrderNumber_Lines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
purchaseOrderNumber	string	<input checked="" type="checkbox"/>		Identifies the Purchase Order

Columns of Table Function

The columns of the table function PurchaseOrderOrderBypurchaseOrderNumber_Lines are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	
alternateId	string	Alternate ID	<input type="checkbox"/>	Alternate ID > The alternate ID used for this stock item-subitem pair by the supplier.
amount	double	Amount	<input type="checkbox"/>	Amount > The amount calculated (after the discount has been taken) for the item.
branch_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branch_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branch_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branch_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
canceled	boolean	Canceled	<input type="checkbox"/>	Cancelled > A check box that indicates (if selected) that this line of the purchase order has been cancelled.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
completed	boolean	Completed	<input type="checkbox"/>	Completed > A check box that indicates (if selected) that the purchasing of the item requested by this line of the purchase order has been completed.
completeOn	double		<input type="checkbox"/>	Complete on (%) > The minimum percentage of the ordered quantity for the stock

Name	Data Type	Label	Required	Documentation
				item that must be received to complete the purchase order line (gets the default value from the Threshold receipt (%) setting of the supplier in the (AP303000) window).
controlTotal	double	Total for Control	<input type="checkbox"/>	The top part > Control total > The order's total amount (including VAT), which you must enter manually when you attempt to save the order with the Balanced status.
controlTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Control total to your base currency if the amount on the purchase order is in another currency than base currency. When you click the button, the button toggles to View currency.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency > The currency the purchase order will be paid in.
date	datetime	Date	<input type="checkbox"/>	Mandatory field: The top part > Date* > The date when the purchase order was created.
description	string	Description	<input type="checkbox"/>	The top part > Description > A brief description of the purchase order.
discountAmount	double		<input type="checkbox"/>	Discount amount > If the Supplier customer discounts functionality is enabled in the Enable/disable functionalities (CS100000) window, the amount of the discount that has been specified manually or calculated based on the discount percent entered manually.
discountCode_description	string	Discount Code Description	<input type="checkbox"/>	Name of item/description
discountCode_number	string	Discount Code Number	<input type="checkbox"/>	Number of item
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent > If the Supplier customer discounts functionality is enabled in the Enable/disable functionalities (CS100000) window, the percent of the discount that has been entered manually or calculated based on the discount amount entered manually for this line item.
dontEmail	boolean	Don't Email	<input type="checkbox"/>	Other information > Do not email > A check box that indicates (if selected) indicates that the purchase order should not be emailed.

Name	Data Type	Label	Required	Documentation
dontPrint	boolean	Don't Print	<input type="checkbox"/>	Other information > Do not print > A check box that indicates (if selected) that the current purchase order should not be printed.
emailed	boolean	Emailed	<input type="checkbox"/>	Other information > Emailed > A check box that indicates (if selected) indicates that the current purchase order was emailed.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	
extCost	double		<input type="checkbox"/>	Ext. cost > The extended cost of the item, which is the unit cost multiplied by the quantity.
fobPoint	string		<input type="checkbox"/>	Delivery instructions tab > The Delivery instructions section > FOB point > The FOB point where the title of goods (listed on this purchase order) is transferred from the supplier to the company.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that you select to give the purchase order the On hold status.
inventory_description	string	Inventory Description	<input type="checkbox"/>	Name of item/description
inventory_number	string	Inventory Number	<input type="checkbox"/>	Number of item
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated information.
lineDescription	string	Line Description	<input type="checkbox"/>	A description of the order line, which is copied from the item's description.
lineNbr	int32		<input type="checkbox"/>	The line number
lineTotal	double	Line Total	<input type="checkbox"/>	The top part > Line total > The total sum of the Extended amount entries for all lines in the current purchase order. This value is calculated by the system and users cannot manually change it.
lineTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Line total to your base currency if the amount on the purchase order is in another currency than base currency. When you click the button, the button toggles to View currency.
lineType	string	Line Type	<input type="checkbox"/>	Line type > The type of the order line, which can be one of the following options: Goods for inventory, Non-stock, Service, Freight, Good for sales order, Non-stock for drop-ship, Drop-ship, Goods for RP, Description.

Name	Data Type	Label	Required	Documentation
location_id	int32	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name
manualDiscount	boolean		<input type="checkbox"/>	Manual discount > A check box that indicates (if selected) that the discount has been applied manually.
maxReceipt	double		<input type="checkbox"/>	Max. receipt (%) > The maximum quantity of the item, expressed as a percentage of the ordered quantity, that is required for the item to be accepted at the warehouse if the Receipt action is Rejected.
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
minReceipt	double		<input type="checkbox"/>	Min. receipt (%) > The minimum quantity of the item, expressed as a percentage of the ordered quantity, that is required for the item to be accepted at the warehouse if the Receipt action is Rejected.
note_1	string		<input type="checkbox"/>	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
note	string	Note	<input type="checkbox"/>	Table > Icon Notes > Pop-up window for providing any user-defined text connected to the order.
openBalance	double	Open Balance	<input type="checkbox"/>	Other information > Open amount > The amount of these items that are ordered but not received.
openQuantity	double		<input type="checkbox"/>	Other information > Open Quantity > The difference between the quantities of ordered and received items.
orderNbr	string	Order Number	<input type="checkbox"/>	The top part > Order no. > The unique reference number of the purchase order, which the system assigns based on the number series assigned to purchase orders of this type, as specified in the PO101000 window .
orderNumber	string	Order Number	<input type="checkbox"/>	Order no. > The reference number of the blanket or standard order (for normal orders based on blanket or standard orders).
orderQty	double	Order Quantity	<input type="checkbox"/>	Order qty. > The quantity of the item that has been ordered.

Name	Data Type	Label	Required	Documentation
orderTotal	double	Order Total	<input type="checkbox"/>	The Top part > Order total >; The total sum for the purchase order, including VAT. This read-only value is the sum of the Line total and VAT total values.
orderTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base >; A button that recalculates the Order total to your base currency if the amount on the purchase order is in another currency than base currency. When you click the button, the button toggles to View currency.
orderType_1	string		<input type="checkbox"/>	The top part > Type >; The type of the purchase order, which can be one of these options: Normal, Drop-ship, Blanket, Default
orderType	string	Order Type	<input type="checkbox"/>	Order type >; The order type this order is related to (for normal orders based on blanket or standard orders).
owner_id	guid	Owner ID	<input type="checkbox"/>	Click the magnifier >; The identifier
owner_name	string	Owner Name	<input type="checkbox"/>	Click the magnifier >; The displayed name
paymentRefNbr	string	Payment Reference Number	<input type="checkbox"/>	Other information tab >; Prepayment ref. no. >; The reference number of the prepayment request linked to this purchase order, if any.
printed	boolean	Printed	<input type="checkbox"/>	Other information >; Printed >; A check box that indicates (if selected) that the current purchase order was printed.
project_description	string	Project Description	<input type="checkbox"/>	Click on the magnifier. >; The description.
project_id	string	Project ID	<input type="checkbox"/>	Click on the magnifier. >; The identifier.
projectTask_description	string	Project Task Description	<input type="checkbox"/>	Click on the magnifier. >; The description.
projectTask_id	string	Project Task ID	<input type="checkbox"/>	Click on the magnifier. >; The identifier.
promised	datetime	Promised	<input type="checkbox"/>	Promised >; The date when the item's deliver was promised.
promisedOn	datetime	Promised on	<input type="checkbox"/>	The top part > Delivery date >; The date when the supplier promised that the items listed in the order will be received at their destination location.
qtyOnReceipts	double		<input type="checkbox"/>	Qty. on receipts >; The quantity of the item that has been received according to all receipts, including the unreleased ones.

Name	Data Type	Label	Required	Documentation
receiptAction	string		<input type="checkbox"/>	Receipt action > The action that should be perform w hen the ordered item is received if its quantity is greater than the Max. receipt value or less than the Min. receipt value calculated based on the line's ordered quantity. Values: Reject, Accept but w arn, Accept.
receivedAmt	double	Received Amount	<input type="checkbox"/>	Received amt. > The amount received on this purchase order for this item.
remitAddress_addressId	int32		<input type="checkbox"/>	
remitAddress_addressLine1	string		<input type="checkbox"/>	Address 1 > The first line of the customer's/supplier's/company's/employee's contact address.

79.1.6 PurchaseOrderOrderBypurchaseOrderNumber_PurchaseReceipts

Get a specific Purchase Order

Catalog: VismaNet

Schema: PurchaseOrder

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PurchaseOrderOrderBypurchaseOrderNumber_PurchaseReceipts. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
purchaseOrderNumber	string	<input checked="" type="checkbox"/>		Identifies the Purchase Order

Columns of Table Function

The columns of the table function PurchaseOrderOrderBypurchaseOrderNumber_PurchaseReceipts are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
branch_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branch_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
controlTotal	double	Total for Control	<input type="checkbox"/>	The top part > Control total > The order's total amount (including VAT), which you must enter manually when you attempt to save the order with the Balanced status.
controlTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Control total to your base currency if the amount on the purchase order is in another currency than base currency. When you click the button, the button toggles to View currency.
currency_1	string		<input type="checkbox"/>	The top part > Currency > The currency the purchase order will be paid in.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency > The currency the supplier uses for invoicing.
date	datetime	Date	<input type="checkbox"/>	Mandatory field: The top part > Date* > The date when the purchase order was created.
description	string	Description	<input type="checkbox"/>	The top part > Description > A brief description of the purchase order.

Name	Data Type	Label	Required	Documentation
dontEmail	boolean	Don't Email	<input type="checkbox"/>	Other information > Do not email > A check box that indicates (if selected) indicates that the purchase order should not be emailed.
dontPrint	boolean	Don't Print	<input type="checkbox"/>	Other information > Do not print > A check box that indicates (if selected) that the current purchase order should not be printed.
emailed	boolean	Emailed	<input type="checkbox"/>	Other information > Emailed > A check box that indicates (if selected) indicates that the current purchase order was emailed.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	
fobPoint	string		<input type="checkbox"/>	Delivery instructions tab > The Delivery instructions section > FOB point > The FOB point where the title of goods (listed on this purchase order) is transferred from the supplier to the company.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that you select to give the purchase order the On hold status.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated information.
lineTotal	double	Line Total	<input type="checkbox"/>	The top part > Line total > The total sum of the Extended amount entries for all lines in the current purchase order. This value is calculated by the system and users cannot manually change it.
lineTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Line total to your base currency if the amount on the purchase order is in another currency than base currency. When you click the button, the button toggles to View currency.

79.1.7 PurchaseOrderOrderBypurchaseOrderNumber_TaxDetails

Get a specific Purchase Order

Catalog: VismaNet

Schema: PurchaseOrder

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PurchaseOrderOrderBypurchaseOrderNumber_TaxDetails. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
purchaseOrderNumber	string	<input checked="" type="checkbox"/>		Identifies the Purchase Order

Columns of Table Function

The columns of the table function PurchaseOrderOrderBypurchaseOrderNumber_TaxDetails are shown below. Each column has an SQL data type.

79.1.8 PurchaseOrderReceipts: Visma.net Financials Purchase Order Receipts

Get a range of Purchase Order - ScreenId=PO301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size
Change log:2020-May:Added forced pagination

Catalog: VismaNet

Schema: PurchaseOrder

Label: Purchase Order Receipts

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PurchaseOrderReceipts. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Filter on order no. and forward
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
orderStatus	string	<input type="checkbox"/>		Select and filter on Status. (Waarden: Balanced, Cancelled, Closed, Hold, Open, PendingEmail, PendingPrint, Printed, Voided)
orderType	string	<input type="checkbox"/>		Select and filter on Type. (Waarden: RegularOrder, DropShip, Blanket, StandardBlanket)
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.

Name	Data Type	Required	Default Value	Documentation
supplier	string	<input type="checkbox"/>		Filter on Supplier.

Columns of Table Function

The columns of the table function PurchaseOrderReceipts are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
branch_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branch_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
controlTotal	double	Total for Control	<input type="checkbox"/>	The top part > Control total > The order's total amount (including VAT), w hich you must enter manually w hen you attempt to save the order w ith the Balanced status.
controlTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Control total to your base currency if the amount on the purchase order is in another currency then base currency. When you click the button, the button toggles to View currency.
currency_1	string		<input type="checkbox"/>	The top part > Currency > The currency the purchase order will be paid in.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency > The currency the supplier uses for invoicing.
date	datetime	Date	<input type="checkbox"/>	Mandatory field: The top part > Date* > The date w hen the purchase order w as created.
description	string	Description	<input type="checkbox"/>	The top part > Description > A brief description of the purchase order.
dontEmail	boolean	Don't Email	<input type="checkbox"/>	Other information > Do not email > A check box that indicates (if selected) indicates that the purchase order should not be emailed.
dontPrint	boolean	Don't Print	<input type="checkbox"/>	Other information > Do not print > A check box that indicates (if selected) that the current purchase order should not be printed.
emailed	boolean	Emailed	<input type="checkbox"/>	Other information > Emailed > A check box that indicates

Name	Data Type	Label	Required	Documentation
				(if selected) indicates that the current purchase order was emailed.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	
fobPoint	string		<input type="checkbox"/>	Delivery instructions tab > The Delivery instructions section > FOB point > The FOB point where the title of goods (listed on this purchase order) is transferred from the supplier to the company.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that you select to give the purchase order the On hold status.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated information.
lineTotal	double	Line Total	<input type="checkbox"/>	The top part > Line total > The total sum of the Extended amount entries for all lines in the current purchase order. This value is calculated by the system and users cannot manually change it.
lineTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Line total to your base currency if the amount on the purchase order is in another currency than base currency. When you click the button, the button toggles to View currency.
location_id	int32	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name

79.1.9 PurchaseOrders: Visma.net Financials Purchase Orders

Get a range of Purchase Order - ScreenId=PO301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added forced pagination

Catalog: VismaNet

Schema: PurchaseOrder

Label: Purchase Orders

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PurchaseOrders. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Filter on order no. and forward
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pagesize for pagination purposes. PageNumber and pagesize does not work with NumberToRead and SkipRecords.
orderStatus	string	<input type="checkbox"/>		Select and filter on Status. (Waarden: Balanced, Cancelled, Closed, Hold, Open, PendingEmail, PendingPrint, Printed, Voided)

Name	Data Type	Required	Default Value	Documentation
orderType	string	<input type="checkbox"/>		Select and filter on Type. (Waarden: RegularOrder, DropShip, Blanket, StandardBlanket)
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
supplier	string	<input type="checkbox"/>		Filter on Supplier.

Columns of Table Function

The columns of the table function PurchaseOrders are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
branch_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branch_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
controlTotal	double	Total for Control	<input type="checkbox"/>	The top part > Control total > The order's total amount (including VAT), which you must enter manually when you attempt to save the order with the Balanced status.
controlTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Control total to your base currency if the amount on the purchase order is in another currency then base currency. When you click the button, the button toggles to View currency.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency > The currency the purchase

Name	Data Type	Label	Required	Documentation
				order will be paid in.
date	datetime	Date	<input type="checkbox"/>	Mandatory field: The top part > Date* > The date when the purchase order was created.
description	string	Description	<input type="checkbox"/>	The top part > Description > A brief description of the purchase order.
dontEmail	boolean	Don't Email	<input type="checkbox"/>	Other information > Do not email > A check box that indicates (if selected) indicates that the purchase order should not be emailed.
dontPrint	boolean	Don't Print	<input type="checkbox"/>	Other information > Do not print > A check box that indicates (if selected) that the current purchase order should not be printed.
emailed	boolean	Emailed	<input type="checkbox"/>	Other information > Emailed > A check box that indicates (if selected) indicates that the current purchase order was emailed.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	
fobPoint	string		<input type="checkbox"/>	Delivery instructions tab > The Delivery instructions section > FOB point > The FOB point where the title of goods (listed on this purchase order) is transferred from the supplier to the company.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that you select to give the purchase order the On hold status.
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated information.
lineTotal	double	Line Total	<input type="checkbox"/>	The top part > Line total > The total sum of the Extended amount entries for all lines in the current purchase order. This value is calculated by the system and users cannot manually change it.
lineTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Line total to your base currency if the amount on the purchase order is in another currency than base currency. When you click the button, the button toggles to View currency.
location_id	int32	Location ID	<input type="checkbox"/>	Click the magnifier > The identifier
location_name	string	Location Name	<input type="checkbox"/>	Click the magnifier > The displayed name

Name	Data Type	Label	Required	Documentation
metadata_maxPageSize	int64		<input type="checkbox"/>	
metadata_totalCount	int64	Total Count	<input type="checkbox"/>	
note	string	Note	<input type="checkbox"/>	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
openBalance	double	Open Balance	<input type="checkbox"/>	Other information > Open amount > The amount of these items that are ordered but not received.
openQuantity	double		<input type="checkbox"/>	Other information > Open Quantity > The difference between the quantities of ordered and received items.
orderNbr	string	Order Number	<input type="checkbox"/>	The top part > Order no. > The unique reference number of the purchase order, which the system assigns based on the number series assigned to purchase orders of this type, as specified in the PO101000 window .
orderTotal	double	Order Total	<input type="checkbox"/>	The Top part > Order total > The total sum for the purchase order, including VAT. This read-only value is the sum of the Line total and VAT total values.
orderTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Order total to your base currency if the amount on the purchase order is in another currency then base currency. When you click the button, the button toggles to View currency.
orderType	string	Order Type	<input type="checkbox"/>	The top part > Type > The type of the purchase order, which can be one of these options: Normal, Drop-ship, Blanket, Default
owner_id	guid	Owner ID	<input type="checkbox"/>	Click the magnifier > The identifier
owner_name	string	Owner Name	<input type="checkbox"/>	Click the magnifier > The displayed name
paymentRefNbr	string	Payment Reference Number	<input type="checkbox"/>	Other information tab > Prepayment ref. no. > The reference number of the prepayment request linked to this purchase order, if any.
printed	boolean	Printed	<input type="checkbox"/>	Other information > Printed > A check box that indicates (if selected) that the current purchase order was printed.
promisedOn	datetime	Promised on	<input type="checkbox"/>	The top part > Delivery date > The date when the supplier promised that the items listed in

Name	Data Type	Label	Required	Documentation
				the order will be received at their destination location.

79.1.10 PurchaseOrderTaxDetails: Visma.net Financials Purchase Order Tax Details

Get a range of Purchase Order - ScreenId=PO301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added forced pagination

Catalog: VismaNet

Schema: PurchaseOrder

Label: Purchase Order Tax Details

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PurchaseOrderTaxDetails. A value must be provided at all times for required parameters, but

optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Filter on order no. and forward
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.

80.1.1 BasicPurchaseOrderLines: Visma.net Financials Basic Purchase Order Lines

Get a range of Purchase Order - ScreenId=PO301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size

Catalog: VismaNet

Schema: PurchaseOrderBasic

Label: Basic Purchase Order Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function BasicPurchaseOrderLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

80.1.3 BasicPurchaseOrders: Visma.net Financials Basic Purchase Orders

Get a range of Purchase Order - ScreenId=PO301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size

Catalog: VismaNet

Schema: PurchaseOrderBasic

Label: Basic Purchase Orders

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function BasicPurchaseOrders. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

taxTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the VAT total to your base currency if the amount on the purchase order is in another currency than base currency. When you click the button, the button toggles to View currency.
vatExemptTotal	double	VAT Exempt Total	<input type="checkbox"/>	The Top part > VAT exempt total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the VAT with the Include in VAT exempt total check box selected in the TX205000 window.
vatExemptTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the VAT exempt total to your base currency if the amount on the purchase order is in another currency than base currency. When you click the button, the button toggles to View currency.

80.1.6 PurchaseOrderBasicPurchaseOrderBasicBypurchaseOrderNumber_Lines

Get a specific Purchase Order

Catalog: VismaNet

Schema: PurchaseOrderBasic

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PurchaseOrderBasicPurchaseOrderBasicBypurchaseOrderNumber_Lines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
purchaseOrderNumber	string	<input checked="" type="checkbox"/>		Identifies the Purchase Order

Columns of Table Function

The columns of the table function PurchaseOrderBasicPurchaseOrderBasicBypurchaseOrderNumber_Lines are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_description	string	Account Description	<input type="checkbox"/>	Name of item/description

Name	Data Type	Label	Required	Documentation
account_number	string	Account Number	<input type="checkbox"/>	Number of item
account_type	string	Account Type	<input type="checkbox"/>	
alternateId	string	Alternate ID	<input type="checkbox"/>	Alternate ID > The alternate ID used for this stock item-subitem pair by the supplier.
amount	double	Amount	<input type="checkbox"/>	Amount > The amount calculated (after the discount has been taken) for the item.
branch_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branch_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branch_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branch_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
canceled	boolean	Canceled	<input type="checkbox"/>	Cancelled > A check box that indicates (if selected) that this line of the purchase order has been cancelled.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
completed	boolean	Completed	<input type="checkbox"/>	Completed > A check box that indicates (if selected) that the purchasing of the item requested by this line of the purchase order has been completed.
completeOn	double		<input type="checkbox"/>	Complete on (%) > The minimum percentage of the ordered quantity for the stock item that must be received to complete the purchase order line (gets the default value from the Threshold receipt (%) setting of the supplier in the (AP303000) window).
controlTotal	double	Total for Control	<input type="checkbox"/>	The top part > Control total > The order's total amount (including VAT), which you must enter manually when you attempt to save the order with the Balanced status.
controlTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Control total to your base currency if the amount on the purchase order is in another currency than base currency. When you click the button, the button toggles to View currency.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency > The currency the purchase order will be paid in.

Name	Data Type	Label	Required	Documentation
date	datetime	Date	<input type="checkbox"/>	Mandatory field: The top part > Date* > The date w hen the purchase order w as created.
description	string	Description	<input type="checkbox"/>	The top part > Description > A brief description of the purchase order.
discountAmount	double		<input type="checkbox"/>	Discount amount > If the Supplier customer discounts functionality is enabled in the Enable/disable functionalities (CS100000) w indow , the amount of the discount that has been specified manually or calculated based on the discount percent entered manually.
discountCode_description	string	Discount Code Description	<input type="checkbox"/>	Name of item/description
discountCode_number	string	Discount Code Number	<input type="checkbox"/>	Number of item
discountPercent	double	Discount Percent	<input type="checkbox"/>	Discount percent > If the Supplier customer discounts functionality is enabled in the Enable/disable functionalities (CS100000) w indow , the percent of the discount that has been entered manually or calculated based on the discount amount entered manually for this line item.
errorInfo	string	Error Message	<input type="checkbox"/>	
exchangeRate	double	Exchange Rate	<input type="checkbox"/>	
extCost	double		<input type="checkbox"/>	Ext. cost > The extended cost of the item, w hich is the unit cost multiplied by the quantity.
hold	boolean	Hold	<input type="checkbox"/>	The top part > Hold > A check box that you select to give the purchase order the On hold status.
inventory_description	string	Inventory Description	<input type="checkbox"/>	Name of item/description
inventory_number	string	Inventory Number	<input type="checkbox"/>	Number of item
lastModifiedDateTime	datetime	Last Modified	<input type="checkbox"/>	System generated information.
lineDescription	string	Line Description	<input type="checkbox"/>	A description of the order line, w hich is copied from the item's description.
lineNbr	int32		<input type="checkbox"/>	The line number
lineTotal	double	Line Total	<input type="checkbox"/>	The top part > Line total > The total sum of the Extended amount entries for all lines in the current purchase order. This value is calculated by the system and users cannot manually change it.
lineTotalInBaseCurrency	double		<input type="checkbox"/>	The top part > View base > A button that recalculates the Line total to your base currency if the amount on the purchase

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function BasicPurchaseReceiptLandCosts. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

81.1.4 BasicPurchaseReceipts: Visma.net Financials Basic Purchase Receipts

Get a range of Purchase Receipts - ScreenId=PO302000Please use a page size lower or equal to the allowed max page size which is 500

Catalog: VismaNet

Schema: PurchaseReceipt

Label: Basic Purchase Receipts

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function BasicPurchaseReceipts. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

81.1.8 PurchaseReceiptPurchaseReceiptBasicByreceiptNumber_Lines

Get a specific Purchase Receipt

Catalog: VismaNet

Schema: PurchaseReceipt

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PurchaseReceiptPurchaseReceiptBasicByreceiptNumber_Lines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

82.1.2 BasicPurchaseReceiptLines: Visma.net Financials Basic Purchase Receipt Lines

Get a range with purchase receipts, ScreenId=PO302000Please use a page size lower or equal to the allowed max page size which is 500

Catalog: VismaNet

Schema: PurchaseReceiptBasic

Label: Basic Purchase Receipt Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function BasicPurchaseReceiptLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

82.1.4 PurchaseReceiptBasicPurchaseReceiptBasicByreceiptNumber

Get a specific Purchase Receipt

Catalog: VismaNet

Schema: PurchaseReceiptBasic

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function PurchaseReceiptBasicPurchaseReceiptBasicByreceiptNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

83.1 Tables

83.1.1 SalesCategories: Visma.net Financials Sales Categories

Get Sales Categories - ScreenId=IN204060

Catalog: VismaNet

Schema: SalesCategory

Label: Sales Categories

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesCategories. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When

Name	Data Type	Required	Default Value	Documentation
				the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function SalesCategories are shown below. Each column has an SQL data type.

83.1.9 SalesCategoryItemAttributesByCategoryId: Visma.net Financials Sales Category Item Attributes by Category ID

Get a range of Inventory Items from a specific Sales Category

Catalog: VismaNet

Schema: SalesCategory

Label: Sales Category Item Attributes by Category ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesCategoryItemAttributesByCategoryId. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
categoryId	int32	<input checked="" type="checkbox"/>		Identifies the Sales Category
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

The columns of the table function SalesCategoryItemAttributesByCategoryId are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation

83.1.11 SalesCategoryItemInventoryUnitsByCategoryId: Visma.net Financials Sales Category Item Inventory Units by Category ID

Get a range of Inventory Items from a specific Sales Category

Catalog: VismaNet

Schema: SalesCategory

Label: Sales Category Item Inventory Units by Category ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesCategoryItemInventoryUnitsByCategoryId. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the

default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
categoryId	int32	<input checked="" type="checkbox"/>		Identifies the Sales Category
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Columns of Table Function

83.1.13 SalesCategoryItemsByCategoryId1: Visma.net Financials Sales Category Items by Category ID

Get a range of Inventory Items from a specific Sales Category

Catalog: VismaNet

Schema: SalesCategory

Label: Sales Category Items by Category ID

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesCategoryItemsByCategoryId1. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
categoryId	int32	<input checked="" type="checkbox"/>		Identifies the Sales Category
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

83.1.15 SalesCategorySubCategories: Visma.net Financials Sales Category Subcategories

Get Sales Categories - ScreenId=IN204060

Catalog: VismaNet

Schema: SalesCategory

Label: Sales Category Subcategories

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesCategorySubCategories. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

84.1 Tables

84.1.1 SalesOrderAttachments: Visma.net Financials Sales Order Attachments

Get a range of SO Orders - ScreenId=SO301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If

requested page size is greater than allowed max page size, request will be limited to max page size
Change log:2020-May:Added force paginationData for all Sales Orders

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order Attachments

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesOrderAttachments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Filter on Order no. greater than value.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future

Name	Data Type	Required	Default Value	Documentation
				versions. Use pagenumber and pagesize for pagination purposes. Pagenumber and pagesize does not work with NumberToRead and SkipRecords.
orderBy	string	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. The OrderBy parameter has no effect on the result.
orderType	string	<input type="checkbox"/>		Filter by Order type.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
show Notes	boolean	<input type="checkbox"/>		Set to true to include notes.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pagenumber and pagesize for pagination purposes. Pagenumber and pagesize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		Select to filter on status on order. (Waarden: Open, Hold, CreditHold, Completed, Cancelled, BackOrder, Shipping, Invoiced, PendingApproval, Voided)

84.1.3 SalesOrderAttachmentsByTypeByOrderTypeOrderNumber: Visma.net Financials Sales Order Attachments by Type Order Type Order Number

Get a specific type of OrderData for a single Sales Order

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order Attachments by Type Order Type Order Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesOrderAttachmentsByTypeByOrderTypeOrderNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
orderNbr	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Number
orderType	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Type

Columns of Table Function

The columns of the table function SalesOrderAttachmentsByTypeByOrderTypeOrderNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cancelBy	datetime	Cancel by	<input type="checkbox"/>	Delivery settings tab > Shipping information section > Cancel by > The date when

Name	Data Type	Label	Required	Documentation
				the order should be cancelled if the Back order allowed option has been selected in the Shipping rule field.
canceled	boolean	Canceled	<input type="checkbox"/>	The Delivery settings tab > The Shipping information section > Cancelled > A check box that indicates that the order has been cancelled on the date specified in Cancel by.

84.1.4 SalesOrderByNumber: Visma.net Financials Sales Order by Number

Get a specific SO OrderData for a single Sales Order

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesOrderByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and

Name	Data Type	Required	Default Value	Documentation
				executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
orderNbr	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Number

Columns of Table Function

The columns of the table function SalesOrderByNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cancelBy	datetime	Cancel by	<input type="checkbox"/>	Delivery settings tab > Shipping information section > Cancel by > The date when the order should be cancelled if the Back order allowed option has been selected in the Shipping rule field.
canceled	boolean	Canceled	<input type="checkbox"/>	The Delivery settings tab > The Shipping information section > Cancelled > A check box that indicates that the order has been cancelled on the date specified in Cancel by.
cashAccount	string	Cash Account	<input type="checkbox"/>	Payment settings tab > Cash account
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Financial settings tab > Financial information section > Cash discount date > The date when the cash discount is available for the invoice based on the credit terms.
commissionableAmount	string		<input type="checkbox"/>	The Commissions tab > Commissionable amount> The amount used to calculate the commission.
commissionAmount	string		<input type="checkbox"/>	The Commissions tab > Commission amt. >The commission amount earned by the salesperson on this document.
commissionPercent	string		<input type="checkbox"/>	The Commissions tab > Commission (%) > The percentage of commission

Name	Data Type	Label	Required	Documentation
				generally earned by the salesperson.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
contactId	int32	Contact ID	<input type="checkbox"/>	The top part > Contact > The contact person of the customer.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency > The currency of the document.
customer_internalId	int32	Customer Internal ID	<input type="checkbox"/>	
customer_name	string	Customer Name	<input type="checkbox"/>	The name of the particular destination of the selected type.
customer_number	string	Customer Number	<input type="checkbox"/>	The identifier of the particular destination of the selected type.
customerOrder	string	Customer Order	<input type="checkbox"/>	The top part > Customer order > > The reference number of the original customer document that the sales order is based on.
customerRefNo	string	Customer Reference Number	<input type="checkbox"/>	The top part > External reference > The reference number of the sales order in a third-party application if Visma.net Financials is integrated with such an application and imports the sales orders from it.
customerVATZone_defaultTaxCategory_description	string	VAT Zone Default Tax Category Description	<input type="checkbox"/>	Name of item/description

84.1.6 SalesOrderCommissionsByOrderTypeOrderNumber: Visma.net Financials Sales Order Commissions by Order Type Order Number

Get Sales Order Commissions - ScreenId=SO301000, tab CommissionsData for all Sales Order Commissions

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order Commissions by Order Type Order Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesOrderCommissionsByOrderTypeOrderNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Name	Data Type	Required	Default Value	Documentation
orderNbr	string	<input checked="" type="checkbox"/>		
orderType	string	<input checked="" type="checkbox"/>		

Columns of Table Function

The columns of the table function SalesOrderCommissionsByOrderTypeOrderNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
commissionableAmount	double		<input type="checkbox"/>

84.1.7 SalesOrderLineAttachments: Visma.net Financials Sales Order Line Attachments

Get a range of SO Orders - ScreenId=SO301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added force paginationData for all Sales Orders

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order Line Attachments

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesOrderLineAttachments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the

default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

84.1.8 SalesOrderLineAttachmentsByNumber: Visma.net Financials Sales Order Line Attachments by Number

Get a specific SO OrderData for a single Sales Order

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order Line Attachments by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesOrderLineAttachmentsByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
orderNbr	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Number

Columns of Table Function

The columns of the table function SalesOrderLineAttachmentsByNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
alternateID	string	Alternate ID	<input type="checkbox"/>	Alternate ID > The alternate ID for the item, such as the item ID used by the customer.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cancelBy	datetime	Cancel by	<input type="checkbox"/>	Delivery settings tab > Shipping information section > Cancel by > The date when the order should be cancelled if the Back order allowed option has been selected in the Shipping rule field.
canceled	boolean	Canceled	<input type="checkbox"/>	The Delivery settings tab > The Shipping information section > Canceled > A check box that indicates that the order has been cancelled on the date specified in Cancel by.
cashAccount	string	Cash Account	<input type="checkbox"/>	Payment settings tab > Cash account
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Financial settings tab > Financial information section > Cash discount date > The date when the cash discount is available for the invoice based on the credit terms.
commissionable	boolean	Commissionable	<input type="checkbox"/>	VAT code > The VAT category of the goods mentioned in this line.
commissionableAmount	string		<input type="checkbox"/>	The Commissions tab > Commissionable amount> The amount used to calculate the commission.
commissionAmount	string		<input type="checkbox"/>	The Commissions tab > Commission amt. >The commission amount earned by the salesperson on this document.
commissionPercent	string		<input type="checkbox"/>	The Commissions tab > Commission (%) > The percentage of commission generally earned by the salesperson.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
completed	boolean	Completed	<input type="checkbox"/>	Completed > A check box that can be selected to indicate to the

Name	Data Type	Label	Required	Documentation
				system that this line is completed.
contactId	int32	Contact ID	<input type="checkbox"/>	The top part > Contact >; The contact person of the customer.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency >; The currency of the document.
customer_internalId	int32	Customer Internal ID	<input type="checkbox"/>	
customer_name	string	Customer Name	<input type="checkbox"/>	The name of the particular destination of the selected type.
customer_number	string	Customer Number	<input type="checkbox"/>	The identifier of the particular destination of the selected type.
customerOrder	string	Customer Order	<input type="checkbox"/>	The top part > Customer order >; The reference number of the original customer document that the sales order is based on.
customerRefNo	string	Customer Reference Number	<input type="checkbox"/>	The top part > External reference >; The reference number of the sales order in a third-party application if Visma.net Financials is integrated with such an application and imports the sales orders from it.

84.1.9 SalesOrderLineAttachmentsByTypeByOrderTypeOrderNumber: Visma.net Financials Sales Order Line Attachments by Type Order Type Order Number

Get a specific type of OrderData for a single Sales Order

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order Line Attachments by Type Order Type Order Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariant SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function `SalesOrderLineAttachmentsByTypeByOrderTypeOrderNumber`. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
orderNbr	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Number
orderType	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Type

Columns of Table Function

The columns of the table function `SalesOrderLineAttachmentsByTypeByOrderTypeOrderNumber` are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
alternateID	string	Alternate ID	<input type="checkbox"/>	Alternate ID > The alternate ID for the item, such as the item ID used by the customer.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cancelBy	datetime	Cancel by	<input type="checkbox"/>	Delivery settings tab > Shipping information section >

Name	Data Type	Label	Required	Documentation
				Cancel by > The date when the order should be cancelled if the Back order allowed option has been selected in the Shipping rule field.
canceled	boolean	Canceled	<input type="checkbox"/>	The Delivery settings tab > The Shipping information section > Canceled > A check box that indicates that the order has been cancelled on the date specified in Cancel by.
cashAccount	string	Cash Account	<input type="checkbox"/>	Payment settings tab > Cash account
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Financial settings tab > Financial information section > Cash discount date > The date when the cash discount is available for the invoice based on the credit terms.

84.1.10 SalesOrderLines: Visma.net Financials Sales Order Lines

Get a range of SO Orders - ScreenId=SO301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size
Change log:2020-May:Added force paginationData for all Sales Orders

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order Lines

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesOrderLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the

default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Filter on Order no. greater than value.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
orderBy	string	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. The OrderBy parameter has no effect on the result.
orderType	string	<input type="checkbox"/>		Filter by Order type.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
showNotes	boolean	<input type="checkbox"/>		Set to true to include notes.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with

Name	Data Type	Required	Default Value	Documentation
				NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		Select to filter on status on order. (Waarden: Open, Hold, CreditHold, Completed, Cancelled, BackOrder, Shipping, Invoiced, PendingApproval, Voided)

Columns of Table Function

The columns of the table function SalesOrderLines are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
alternateID	string	Alternate ID	<input type="checkbox"/>	Alternate ID > The alternate ID for the item, such as the item ID used by the customer.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cancelBy	datetime	Cancel by	<input type="checkbox"/>	Delivery settings tab > Shipping information section > Cancel by > The date when the order should be cancelled if the Back order allowed option has been selected in the Shipping rule field.
canceled	boolean	Canceled	<input type="checkbox"/>	The Delivery settings tab > The Shipping information section > Canceled > A check box that indicates that the order has been cancelled on the date specified in Cancel by.
cashAccount	string	Cash Account	<input type="checkbox"/>	Payment settings tab > Cash account
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Financial settings tab > Financial information section > Cash discount date > The date when the cash discount is available for the invoice based on the credit terms.
commissionable	boolean	Commissionable	<input type="checkbox"/>	VAT code > The VAT category of the goods mentioned in this line.
commissionableAmount	string		<input type="checkbox"/>	The Commissions tab > Commissionable amount> The amount used to calculate the commission.

Name	Data Type	Label	Required	Documentation
commissionAmount	string		<input type="checkbox"/>	The Commissions tab > Commission amt. > The commission amount earned by the salesperson on this document.
commissionPercent	string		<input type="checkbox"/>	The Commissions tab > Commission (%) > The percentage of commission generally earned by the salesperson.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
completed	boolean	Completed	<input type="checkbox"/>	Completed > A check box that can be selected to indicate to the system that this line is completed.
contactId	int32	Contact ID	<input type="checkbox"/>	The top part > Contact > The contact person of the customer.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency > The currency of the document.
customer_internalId	int32	Customer Internal ID	<input type="checkbox"/>	
customer_name	string	Customer Name	<input type="checkbox"/>	The name of the particular destination of the selected type.
customer_number	string	Customer Number	<input type="checkbox"/>	The identifier of the particular destination of the selected type.
customerOrder	string	Customer Order	<input type="checkbox"/>	The top part > Customer order > The reference number of the original customer document that the sales order is based on.
customerRefNo	string	Customer Reference Number	<input type="checkbox"/>	The top part > External reference > The reference number of the sales order in a third-party application if Visma.net Financials is integrated with such an application and imports the sales orders from it.
customerVATZone_defaultTaxCategory_description	string	VAT Zone Default Tax Category Description	<input type="checkbox"/>	Name of item/description

84.1.11 SalesOrderLinesByNumber: Visma.net Financials Sales Order Lines by Number

Get a specific SO OrderData for a single Sales Order

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order Lines by Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesOrderLinesByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
orderNbr	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Number

Columns of Table Function

The columns of the table function SalesOrderLinesByNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
alternateID	string	Alternate ID	<input type="checkbox"/>	Alternate ID > The alternate ID for the item, such as the item ID used by the customer.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.

Name	Data Type	Label	Required	Documentation
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cancelBy	datetime	Cancel by	<input type="checkbox"/>	Delivery settings tab >; Shipping information section >; Cancel by >; The date w hen the order should be cancelled if the Back order allow ed option has been selected in the Shipping rule field.
canceled	boolean	Canceled	<input type="checkbox"/>	The Delivery settings tab >; The Shipping information section >; Canceled >; A check box that indicates that the order has been cancelled on the date specified in Cancel by.
cashAccount	string	Cash Account	<input type="checkbox"/>	Payment settings tab >; Cash account
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Financial settings tab >; Financial information section >; Cash discount date >; The date w hen the cash discount is available for the invoice based on the credit terms.
commissionable	boolean	Commissionable	<input type="checkbox"/>	VAT code >; The VAT category of the goods mentioned in this line.
commissionableAmount	string		<input type="checkbox"/>	The Commissions tab >; Commissionable amount>; The amount used to calculate the commission.
commissionAmount	string		<input type="checkbox"/>	The Commissions tab >; Commission amt. >;The commission amount earned by the salesperson on this document.
commissionPercent	string		<input type="checkbox"/>	The Commissions tab >; Commission (%) >; The percentage of commission generally earned by the salesperson.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
completed	boolean	Completed	<input type="checkbox"/>	Completed >; A check box that can be selected to indicate to the system that this line is completed.
contactId	int32	Contact ID	<input type="checkbox"/>	The top part >; Contact >; The contact person of the customer.
currency	string	Currency	<input type="checkbox"/>	The top part >; Currency >; The currency of the document.
customer_internalId	int32	Customer Internal ID	<input type="checkbox"/>	

Name	Data Type	Label	Required	Documentation
customer_name	string	Customer Name	<input type="checkbox"/>	The name of the particular destination of the selected type.
customer_number	string	Customer Number	<input type="checkbox"/>	The identifier of the particular destination of the selected type.
customerOrder	string	Customer Order	<input type="checkbox"/>	The top part > Customer order > The reference number of the original customer document that the sales order is based on.
customerRefNo	string	Customer Reference Number	<input type="checkbox"/>	The top part > External reference > The reference number of the sales order in a third-party application if Visma.net Financials is integrated with such an application and imports the sales orders from it.

84.1.12 SalesOrderLinesByTypeByOrderTypeOrderNumber: Visma.net Financials Sales Order Linesby Type Order Type Order Number

Get a specific type of OrderData for a single Sales Order

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order Linesby Type Order Type Order Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesOrderLinesByTypeByOrderTypeOrderNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
orderNbr	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Number
orderType	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Type

Columns of Table Function

The columns of the table function SalesOrderLinesByTypeByOrderTypeOrderNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
alternateID	string	Alternate ID	<input type="checkbox"/>	Alternate ID > The alternate ID for the item, such as the item ID used by the customer.
branchNumber_name_1	string		<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_name	string	Branch Name	<input type="checkbox"/>	Click the magnifier. > The name.
branchNumber_number_1	string		<input type="checkbox"/>	Click the magnifier. > The identifier.
branchNumber_number	string	Branch Number	<input type="checkbox"/>	Click the magnifier. > The identifier.
cancelBy	datetime	Cancel by	<input type="checkbox"/>	Delivery settings tab > Shipping information section > Cancel by > The date when the order should be cancelled if the Back order allowed option has been selected in the Shipping rule field.
canceled	boolean	Canceled	<input type="checkbox"/>	The Delivery settings tab > The Shipping information section > Cancelled > A check box that indicates that the order has been cancelled on the date specified in Cancel by.
cashAccount	string	Cash Account	<input type="checkbox"/>	Payment settings tab > Cash account

Name	Data Type	Label	Required	Documentation
cashDiscountDate	datetime	Cash Discount Date	<input type="checkbox"/>	Financial settings tab > Financial information section > Cash discount date > The date when the cash discount is available for the invoice based on the credit terms.
commissionable	boolean	Commissionable	<input type="checkbox"/>	VAT code > The VAT category of the goods mentioned in this line.
commissionableAmount	string		<input type="checkbox"/>	The Commissions tab > Commissionable amount> The amount used to calculate the commission.
commissionAmount	string		<input type="checkbox"/>	The Commissions tab > Commission amt. >The commission amount earned by the salesperson on this document.
commissionPercent	string		<input type="checkbox"/>	The Commissions tab > Commission (%) > The percentage of commission generally earned by the salesperson.
COMPANY_CODE	string(30)	Company Code	<input checked="" type="checkbox"/>	Partition code, segmenting the data.
COMPANY_NAME	string(240)	Company Name	<input checked="" type="checkbox"/>	Name of the partition.
completed	boolean	Completed	<input type="checkbox"/>	Completed > A check box that can be selected to indicate to the system that this line is completed.
contactId	int32	Contact ID	<input type="checkbox"/>	The top part > Contact > The contact person of the customer.
currency	string	Currency	<input type="checkbox"/>	The top part > Currency > The currency of the document.
customer_internalId	int32	Customer Internal ID	<input type="checkbox"/>	
customer_name	string	Customer Name	<input type="checkbox"/>	The name of the particular destination of the selected type.
customer_number	string	Customer Number	<input type="checkbox"/>	The identifier of the particular destination of the selected type.
customerOrder	string	Customer Order	<input type="checkbox"/>	The top part > Customer order > The reference number of the original customer document that the sales order is based on.
customerRefNo	string	Customer Reference Number	<input type="checkbox"/>	The top part > External reference > The reference number of the sales order in a third-party application if Visma.net Financials is integrated with such an application and imports the sales orders from it.

84.1.13 SalesOrderPrintByOrderNumberOrderType: Visma.net Financials Sales Order Print by Order Number Order Type

Get the print report of the Sales Order QuoteThe File is in Content of the message

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order Print by Order Number Order Type

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesOrderPrintByOrderNumberOrderType. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
orderNumber	string	<input checked="" type="checkbox"/>		Identifies the order
orderType	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Type

Columns of Table Function

The columns of the table function `SalesOrderPrintByOrderNumberOrderType` are shown below. Each column has an SQL data type.

84.1.17 SalesOrderShipments: Visma.net Financials Sales Order Shipments

Get a range of SO Orders - ScreenId=SO301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added force paginationData for all Sales Orders

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order Shipments

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesOrderShipments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.

Name	Data Type	Required	Default Value	Documentation
greaterThanValue	string	<input type="checkbox"/>		Filter on Order no. greater than value.
lastModifiedDateTime	string	<input type="checkbox"/>		System generated value for last modification of transaction/record. Use format: YYYY-MM-DD HH:MM (date and time) to filter from date to present.
lastModifiedDateTimeCondition	string	<input type="checkbox"/>		System retrieved information for state/condition.
numberToRead	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
orderBy	string	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. The OrderBy parameter has no effect on the result.
orderType	string	<input type="checkbox"/>		Filter by Order type.
pageNumber	int32	<input type="checkbox"/>		Pagination parameter. Page number.
pageSize	int32	<input type="checkbox"/>		Pagination parameter. Number of items to be collected. Please use a page size lower or equal to the allowed max page size which is returned as part of the metadata information. If requested page size is greater than allowed max page size, request will be limited to max page size.
showNotes	boolean	<input type="checkbox"/>		Set to true to include notes.
skipRecords	int32	<input type="checkbox"/>		This field has been deprecated and will be removed in future versions. Use pageNumber and pageSize for pagination purposes. PageNumber and pageSize does not work with NumberToRead and SkipRecords.
status	string	<input type="checkbox"/>		Select to filter on status on order. (Waarden: Open, Hold, CreditHold, Completed, Cancelled, BackOrder, Shipping, Invoiced, PendingApproval, Voided)

84.1.19 SalesOrderShipmentsByTypeByOrderTypeOrderNumber: Visma.net Financials Sales Order Shipments by Type Order Type Order Number

Get a specific type of OrderData for a single Sales Order

Catalog: VismaNet

Schema: SalesOrder

Label: Sales Order Shipments by Type Order Type Order Number

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invariantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function SalesOrderShipmentsByTypeByOrderTypeOrderNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a ``select * from table(value1, value2, value3)`` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with ``select * from table(name1 => value1, name3 => value3)`` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a

Name	Data Type	Required	Default Value	Documentation
				reference to a state document for the background operation.
orderNbr	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Number
orderType	string	<input checked="" type="checkbox"/>		Identifies the Sales Order Type

Columns of Table Function

The columns of the table function SalesOrderShipmentsByTypeByOrderTypeOrderNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation

85 Schema: SalesOrderBasic

85.1 Tables

85.1.1 BasicSalesOrderAttachments: Visma.net Financials Basic Sales Order Attachments

Get a range of Sale Orders - ScreenId=SO301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for all Sales Order Basic

Catalog: VismaNet

Schema: SalesOrderBasic

Label: Basic Sales Order Attachments

The data in this table is partitioned per value of the COMPANY_CODE column.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive SQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function BasicSalesOrderAttachments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
COMPANY_CODE	string	<input type="checkbox"/>		Partition to retrieve data from.
erp-api-background	string	<input type="checkbox"/>		If a URL value is provided, then API endpoint will be queued and executed in background. When the execution of the background operation is finished, the system will POST the response to the specified URL. The endpoint itself responds in this case with a 202-Accepted status and a reference to a state document for the background operation.
greaterThanValue	string	<input type="checkbox"/>		Filter on Order no. greater than value.
